

Contents

Preface	vii
The Ahlfors Lectures	
Acknowledgments	3
Chapter I. Differentiable Quasiconformal Mappings	5
A. The Problem and Definition of Grötzsch	5
B. Solution of Grötzsch's Problem	8
C. Composed Mappings	8
D. Extremal Length	10
E. A Symmetry Principle	13
F. Dirichlet Integrals	13
Chapter II. The General Definition	15
A. The Geometric Approach	15
B. The Analytic Definition	16
Chapter III. Extremal Geometric Properties	23
A. Three Extremal Problems	23
B. Elliptic and Modular Functions	25
C. Mori's Theorem	30
D. Quadruplets	34
Chapter IV. Boundary Correspondence	39
A. The M -condition	39
B. The Sufficiency of the M -condition	42
C. Quasi-isometry	45
D. Quasiconformal Reflection	45
E. The Reverse Inequality	49
Chapter V. The Mapping Theorem	51
A. Two Integral Operators	51
B. Solution of the Mapping Problem	54
C. Dependence on Parameters	58
D. The Calderón-Zygmund Inequality	62
Chapter VI. Teichmüller Spaces	67
A. Preliminaries	67
B. Beltrami Differentials	69
C. Δ Is Open	73

D. The Infinitesimal Approach	77
Editors' Notes	83
The Additional Chapters	
A Supplement to Ahlfors's Lectures CLIFFORD J. EARLE AND IRWIN KRA	87
Complex Dynamics and Quasiconformal Mappings MITSUHIRO SHISHIKURA	119
Hyperbolic Structures on Three-Manifolds that Fiber over the Circle JOHN H. HUBBARD	143
