Introduction	vii
Chapter I. Preliminaries	1
§1. Equisingularity class of a branch. Moduli space	1
§2. Puiseux expansion	3
Chapter II. Equisingularity Invariants	5
§1. The semigroup $\Gamma = v(\mathcal{O})$	5
§2. Conductor and different	7
§3. The characteristic of a branch	9
§4. Conductor and regular differential forms on C	13
§5. Regular differential forms on a plane algebraic curve	14
§6. Return to the local case	14
Chapter III. Parametrizations	19
§1. Short parametrization of a branch	19
§2. The space of short parametrizations	20
§3. The dimension of the \mathbb{C} vector space of holomorphic differential forms modulo exact forms	25
Chapter IV. The Moduli Space	29
§1. Noncompactness of the moduli space for $g \geq 3$	29
§2. The case $g = 2$	31
§3. Compactness of the moduli space of an equisingularity class with characteristic $(4; 6, \beta_2)$	37
Chapter V. Examples	45
§1. $n = 2$ and 3	45
§2. $(n; m = \beta_1) = (4; 5)$	46
§3. $g = 2$, $(n; m, \beta_2) = (4; 6, \beta_2)$	47
§4. $(n; m) = (5; 6)$	47
§5. $(n; m) = (6; 7)$	52
§6. The invariant $r(C)$ in the class $(6; 7)$	61
§7. Topology of the moduli space of the class $(6; 7)$	66
Chapter VI. Applications of Deformation Theory	73
§1. Introduction	73
§2. Viewing the problem from the perspective of Deformation Theory	73
§3. On the dimension of the generic component of the moduli space	80

§4. The dimension of the generic component of the moduli space for the equisingularity class $(n; n + 1)$	85
§5. Remarks and open problems concerning the generic component M_1 of the moduli space (characteristic $(n; n + 1)$)	94
§6. An approach to the problem from the point of view of parametrizations	96
Bibliography	109
Appendix, by B. Teissier	111
