Preface	v
Preface to the original IMPA edition	vii
Introduction	1
Chapter 1. The Ramsey–Dvoretzky–Milman phenomenon	11
1.1. Finite oscillation stability	11
1.2. First example: the sphere \mathbb{S}^∞	18
1.3. Concentration of measure on spheres	21
1.4. Dvoretzky’s theorem	27
1.5. Second example: finite Ramsey theorem	33
1.6. Counterexample: ordered pairs	37
Chapter 2. The fixed point on compacta property	39
2.1. Extremely amenable groups	39
2.2. Example: the unitary group	43
2.3. Example: the group $\text{Aut}(\mathbb{Q}, \leq)$	45
2.4. Counterexample: the infinite symmetric group	46
Chapter 3. The concentration property	49
3.1. Equivariant compactification	49
3.2. Essential sets and the concentration property	51
3.3. Veech theorem	55
3.4. Big sets	58
3.5. Concentration property of \mathbb{S}^∞	62
3.6. Groups of operators with uniform topology	70
Chapter 4. Lévy groups	75
4.1. Infinite unitary group	75
4.2. Group of measurable maps	78
4.3. Martingale technique	80
4.4. Unitary groups of operator algebras	86
4.5. Group of measure-preserving transformations	89
4.6. Full groups	94
Chapter 5. Urysohn metric space and its group of isometries	103
5.1. Urysohn universal metric space	103
5.2. Isometry group	114
5.3. Approximation by finite groups	117
5.4. Kirchberg’s property	122

Chapter 6. Minimal flows	125
6.1. Universal minimal flow	125
6.2. Group of circle homeomorphisms	127
6.3. Infinite symmetric group	130
6.4. Maximal chains and Uspenskij's theorem	132
6.5. Fraïssé theory	135
6.6. Extremely amenable subgroups of S_∞	138
6.7. Minimal flows of automorphism groups	142
6.8. Fixed point on metric compacta property	147
Chapter 7. Further aspects of concentration	149
7.1. Ergodic actions of Lévy groups	149
7.2. Extreme amenability versus Lévy property	155
7.3. Spectrum of functions on $\mathbb{S}^\infty \times \mathbb{S}^\infty$	159
7.4. Concentration to a non-trivial space	163
Chapter 8. Oscillation stability and distortion	171
8.1. Distortion problem for ℓ^2	171
8.2. Weil completion as a setting for distortion	172
8.3. Examples	177
8.4. Hjorth's theorem	179
Bibliography	183
Index	191
