Preface	vii
<b>Tight Closure and Vector Bundles</b> by Holger Brenner	1
Introduction	5
Chapter 1. Tight closure	7
Chapter 2. Forcing algebras and affine-linear bundles	15
Chapter 3. Principal fiber bundles (torsors) and their projective realization	23
Chapter 4. Ample vector bundles	31
Chapter 5. Semistable bundles and the Harder-Narasimhan filtration	37
Chapter 6. Numerical inclusion criteria for tight closure	43
Chapter 7. Numerical criteria for affineness of torsors	49
Chapter 8. Tight closure and plus closure in graded dimension two	53
Chapter 9. Hilbert-Kunz theory	57
Chapter 10. Deformations of tight closure and the localization problem	63
Bibliography	69
<b>Combinatorics and Commutative Algebra</b> by Jürgen Herzog	73
Introduction	77
Chapter 1. Algebraic shifting theory	79
Chapter 2. Discrete polymatroids	91
Chapter 3. Dirac's theorem on chordal graphs	99
Chapter 4. Cohen-Macaulay graphs and finite meet-semilattices	109
Bibliography	119
<b>Notes on Constructive Desingularization</b> by Orlando Villamayor	123
Introduction	127
Chapter 1. First definitions and formulation of the main theorems	129
Chapter 2. Differential operators and monoidal transformations	141

Chapter 3. On inductive and resolution functions	155
Chapter 4. Globalization of local reductions	169
Bibliography	189
