Preface	ix
Chapter 1. Overview	1
1.1. Introduction	2
1.2. Polyhedral bounds	3
1.3. Upper bounds	4
1.4. The Wronski map and the Shapiro Conjecture	5
1.5. Lower bounds	8
Chapter 2. Real Solutions to Univariate Polynomials	13
2.1. Descartes's rule of signs	13
2.2. Sturm's Theorem	16
2.3. A topological proof of Sturm's Theorem	19
Chapter 3. Sparse Polynomial Systems	25
3.1. Polyhedral bounds	26
3.2. Geometric interpretation of sparse polynomial systems	27
3.3. Proof of Kushnirenko's Theorem	29
3.4. Facial systems and degeneracies	33
Chapter 4. Toric Degenerations and Kushnirenko's Theorem	37
4.1. Kushnirenko's Theorem for a simplex	37
4.2. Regular subdivisions and toric degenerations	39
4.3. Kushnirenko's Theorem via toric degenerations	44
4.4. Polynomial systems with only real solutions	47
Chapter 5. Fewnomial Upper Bounds	49
5.1. Khovanskii's fewnomial bound	49
5.2. Kushnirenko's Conjecture	54
5.3. Systems supported on a circuit	56
Chapter 6. Fewnomial Upper Bounds from Gale Dual Polynomial Systems	61
6.1. Gale duality for polynomial systems	62
6.2. New fewnomial bounds	66
6.3. Dense fewnomials	74
Chapter 7. Lower Bounds for Sparse Polynomial Systems	77
7.1. Polynomial systems as fibers of maps	78
7.2. Orientability of real toric varieties	80
7.3. Degree from foldable triangulations	84
7.4. Open problems	89

Chapter 8. Some Lower Bounds for Systems of Polynomials	91
8.1. Polynomial systems from posets	91
8.2. Sagbi degenerations	96
8.3. Incomparable chains, factoring polynomials, and gaps	100
Chapter 9. Enumerative Real Algebraic Geometry	105
9.1. 3264 real conics	105
9.2. Some geometric problems	109
9.3. Schubert Calculus	116
Chapter 10. The Shapiro Conjecture for Grassmannians	121
10.1. The Wronski map and Schubert Calculus	122
10.2. Asymptotic form of the Shapiro Conjecture	124
10.3. Grassmann duality	130
Chapter 11. The Shapiro Conjecture for Rational Functions	133
11.1. Nets of rational functions	133
11.2. Schubert induction for rational functions and nets	137
11.3. Rational functions with prescribed coincidences	141
Chapter 12. Proof of the Shapiro Conjecture for Grassmannians	147
12.1. Spaces of polynomials with given Wronskian	148
12.2. The Gaudin model	152
12.3. The Bethe Ansatz for the Gaudin model	154
12.4. Shapovalov form and the proof of the Shapiro Conjecture	157
Chapter 13. Beyond the Shapiro Conjecture for the Grassmannian	161
13.1. Transversality and the Discriminant Conjecture	161
13.2. Maximally inflected curves	164
13.3. Degree of Wronski maps and beyond	167
13.4. The Secant Conjecture	170
Chapter 14. The Shapiro Conjecture Beyond the Grassmannian	173
14.1. The Shapiro Conjecture for the orthogonal Grassmannian	173
14.2. The Shapiro Conjecture for the Lagrangian Grassmannian	175
14.3. The Shapiro Conjecture for flag manifolds	179
14.4. The Monotone Conjecture	180
14.5. The Monotone Secant Conjecture	186
Bibliography	189
Index of Notation	195
Index	197
