

# Contents

Preface	vii
<b>Part 1. Classical Topics</b>	<b>1</b>
Chapter 1. Panorama of Arithmetic Functions	3
Chapter 2. The Euler–Maclaurin Formula	9
Chapter 3. Tchebyshev’s Prime Seeds	13
Chapter 4. Elementary Prime Number Theorem	15
Chapter 5. The Riemann Memoir	21
Chapter 6. The Analytic Continuation	23
Chapter 7. The Functional Equation	25
Chapter 8. The Product Formula over the Zeros	27
Chapter 9. The Asymptotic Formula for $N(T)$	33
Chapter 10. The Asymptotic Formula for $\psi(x)$	37
Chapter 11. The Zero-free Region and the PNT	41
Chapter 12. Approximate Functional Equations	43
Chapter 13. The Dirichlet Polynomials	47
Chapter 14. Zeros off the Critical Line	55
Chapter 15. Zeros on the Critical Line	57
<b>Part 2. The Critical Zeros after Levinson</b>	<b>63</b>
Chapter 16. Introduction	65
Chapter 17. Detecting Critical Zeros	67
Chapter 18. Conrey’s Construction	69
Chapter 19. The Argument Variations	71
Chapter 20. Attaching a Mollifier	75

Chapter 21.	The Littlewood Lemma	77
Chapter 22.	The Principal Inequality	79
Chapter 23.	Positive Proportion of the Critical Zeros	81
Chapter 24.	The First Moment of Dirichlet Polynomials	83
Chapter 25.	The Second Moment of Dirichlet Polynomials	85
Chapter 26.	The Diagonal Terms	87
Chapter 27.	The Off-diagonal Terms	95
Chapter 28.	Conclusion	103
Chapter 29.	Computations and the Optimal Mollifier	107
Appendix A.	Smooth Bump Functions	111
Appendix B.	The Gamma Function	115
	Bibliography	117
	Index	119
