

General Index

- Δ -filtration, 44
- ∇ -filtration, 44
- adjacency, 52
- affine scheme, 16
 - group, 16
- algebra
 - quasi hereditary, 46
 - Schur, 50
 - trace, 28
- algebra with trace, 28
- bitableaux
 - semistandard, 60
- canonical tableau, 53
- Cayley–Hamilton identity, 30
- composition, 95
- cyclic equivalence, 5
- dominance order, 51
- equivariant maps, 26
- essential extension, 40
- free Schur algebra, 137
- full polarization, 92
- height, 20
- injective hull, 40
- linear algebraic group, 12
- matrix variable, 34
- module
 - socle, 42
 - superfluous, 40
 - tilting, 82
 - top, 42
- monomial
 - primitive, 4
- multilinearization, 24
- multiplicative map, 11
- partial polarization, 92
- polarization
 - full, 24
 - polynomial law, 9
 - projective cover, 40
- rational representation, 13
- restitution, 24
- rim
 - of a diagram, 76
- row bitableau, 59
- Schur functors, 66
- Schur module, 65
- Schur symmetric function, 20
- shape of the diagram, 51
- simple degeneration, 103
- skew diagram, 51
- specialization, 24
- Standard filtration, 68
- straightening relation, 56
- trace
 - formal, 28
- weight, 51
 - of a bitableau, 63
 - dominant, 51
- Weyl module, 69
- Young diagram, 51
- Young superclass, 103
- Young tableau, 52
 - standard, 52
