

## Subject Index

- action functional, *see* symplectic, action functional
- action spectrum, 101
- algebraic stability theorem, 24
- almost complex structure, 90
  - compatible, 90
- alternance, *see* Chebyshev's alternance theorem
- Arnold conjecture, 89, 92
  - counterexample for homeomorphisms, 98
- asymptotic cone, 82
  
- Banach indicatrix, 69
- barcode, 13
  - $\delta$ -matched, *see* matching,  $\delta$ -matching
  - of a persistence module, 13
  - of finite type, 13
  - of locally finite type, 21
- bottleneck distance, 19
  - between Hamiltonian barcodes, *see* dynamical stability theorem
  - between Morse barcodes, *see* functional stability theorem
  - between Rips barcodes, *see* metric stability theorem
  - between symplectic barcodes, *see* topological stability theorem
- boundary depth, 36, 94
  - of a filtered complex, 37
  - of hyperbolic manifolds, 50
  
- Cayley graph, 50
- Čech
  - complex, 54
  - persistence module, 54
  - interleaved with Rips module, 54
- characteristic exponent, 35
  - and homological min-max, 36
- foliation, 100
- Chebyshev's alternance theorem, 63
- complex persistence module, *see* persistence, module, complex
- Conley-Zehnder index, 87
  - normalized, 88
  - of a periodic orbit, 90
- crossing form, 87
  
- Darboux's theorem, 78
- displacement energy, 81
  - is a symplectic capacity, 84
- dynamical stability theorem, 92
  
- egg-beater maps, 83, 96
- Eilenberg-MacLane spaces, *see* Rips, complex, and Eilenberg-MacLane spaces
- exact symplectomorphism, *see also* symplectomorphism, exact
  
- filtered chain complex, 37
  - with a preferred basis, 64
- Floer homology, 91
  - filtered, 91
  - in a non-contractible class, 96
- Fubini-Study symplectic form, 78
- functional stability theorem, 20
  
- $G$ -Gromov-Hausdorff distance, *see* Gromov-Hausdorff distance, and group actions

- $G$ -interleaving distance, *see*
  - interleaving distance, and
  - persistence representation
- Gromov radius, 84
- Gromov-Hausdorff distance, 10
  - and group actions, 44
- $\text{Ham}(M, \omega)$ , 79
  - is a group, 80
- Hamiltonian
  - diffeomorphism, 79
    - non-degenerate, 90
  - flow, 77, 79
  - function
    - normalized, 79
  - homeomorphism, 98
  - persistence module, 92
  - vector field, 79
    - in  $\mathbb{R}^{2n}$ , 77
- Hofer
  - metric, 80
    - non-degeneracy, 92
  - norm, 80
- hyperbolic
  - group, 50
  - metric space, *see* metric space,
    - $\delta$ -hyperbolic
- interleaving
  - distance, 7
    - and persistence representation, 42
    - between Morse persistence modules, 9
    - between Rips modules, 10
  - morphism, 7
- interval module, 6
- inverse
  - limit, 101
  - system, 101
- isometry theorem, 20
- least action principle, 89
- length of the barcode, 61
  - and Sobolev  $W^{2,2}$  norm, 68
  - and the Banach indicatrix, 70
- Liouville
  - manifold, 99
  - morphism, 105
    - induced map on symplectic homology, 106
  - theorem, 78
  - vector field, 99
- Maslov index, 89
- matching, 19
  - $\delta$ -matching, 19
  - induced, 27
    - for injections, 26
    - for surjections, 26
  - lemma, 34
- metric space
  - $\delta$ -hyperbolic, 49
  - finite, 4, 10, 20, 54
- metric stability theorem, 20
- morphism of persistence modules, 5
  - $\delta$ -shift, 5
  - interleaving, *see* interleaving
- Morse
  - persistence module, 4
- multiplicity function, 40
  - and distance to complex persistence modules, 41
- nerve lemma, 57
- non-squeezing theorem, 84, 109
- normal form theorem, 13
- oscillation with respect to a triangulation, 66
- periodic orbit
  - and the action functionals, 90
  - and the Arnold conjecture, 90
  - index, *see also* Conley-Zehnder index, of a periodic orbit
  - non-degenerate, 90
- persistence
  - module, 3
    - complex, 40
    - $\delta$ -shift, 5
    - direct sum, 6
    - interleaved, *see* interleaving morphism
    - interval module, *see* interval module
    - Morse, *see* Morse persistence module
    - of finite type, 3

- of locally finite type, 20
  - Rips, *see* Rips module
  - truncated, 58
  - with involution, 42
- morphism, *see* morphism of persistence modules
- representation, 41
  - on Hamiltonian persistence modules, 94
- submodule, 5
  - semi-surjective, 14
- persistent homology, 5
- pmi, *see* persistence, modules, with involution
- quasi-isometric embedding, 82
- Rips
  - complex, 4
    - and Eilenberg-MacLane spaces, 51
    - and hyperbolic metric spaces, 50
  - module, 4
    - and manifold learning, 57
- Rokhlin property, 98
- Sasaki metric, 70
- spectral
  - invariants, 93
  - norm, 94
- spectrum of a persistence module, 14
- star-shaped
  - domain, 99
    - non-degenerate, 101
  - hypersurface, 99
    - non-degenerate, 101
- surjective correspondence, 9
  - distortion, 10
- $\text{Symp}(M, \omega)$ , 79
- symplectic
  - action functional, 89
  - Banach-Mazur distance, 105
  - capacity, 84
  - form, 78
  - homology, 102
    - computation for ellipsoids, 111
  - functoriality, 106
  - linear group, 87
  - persistence module, 102
- symplectomorphism, 79
  - exact, 100
- topological stability theorem, 106
- truncation of persistence module, *see* persistence, module, truncated
- $(U, V)$ -admissible, 105
- Vietoris-Rips complex, *see* Rips complex
