Preface	vii
Part 1. A primer of persistence modules	1
Chapter 1. Definition and first examples	3
1.1. Persistence modules	3
1.2. Morphisms	5
1.3. Interleaving distance	7
1.4. Morse persistence modules and approximation	9
1.5. Rips modules and the Gromov-Hausdorff distance	9
Chapter 2. Barcodes	13
2.1. The Normal Form Theorem	13
2.2. Bottleneck distance and the Isometry Theorem	19
2.3. Corollary: Stability theorems	20
2.4. Persistence modules of locally finite type	20
Chapter 3. Proof of the Isometry Theorem	23
3.1. An outline	23
3.2. Matchings for surjections and injections	24
3.3. Main lemmas and proof of the theorem	29
3.4. Proofs of Lemma 3.3.1 and Lemma 3.3.2	30
Chapter 4. What can we read from a barcode?	33
4.1. Infinite bars and characteristic exponents	33
4.2. Boundary depth and approximation	36
4.3. The multiplicity function	39
4.4. Representations on persistence modules	41
Part 2. Applications to metric geometry and function theory	47
Chapter 5. Applications of Rips complexes	49
5.1. δ -hyperbolic spaces	49
5.2. Čech complex, Rips complex and topological data analysis	54
5.3. Manifold learning	57
Chapter 6. Topological function theory	61
6.1. Prologue	61
6.2. Invariants of upper triangular matrices	63
6.3. Simplex counting method	66

6.4.	The length of the barcode	68
6.5.	Approximation by trigonometric polynomials	71
Part 3. Persistent homology in symplectic geometry		75
Chapter 7.	A concise introduction to symplectic geometry	77
7.1.	Hamiltonian dynamics	77
7.2.	Symplectic structures on manifolds	78
7.3.	The group of Hamiltonian diffeomorphisms	79
7.4.	Hofer's bi-invariant geometry	80
7.5.	A short tour in coarse geometry	82
7.6.	Zoo of symplectic embeddings	83
Chapter 8.	Hamiltonian persistence modules	87
8.1.	Conley-Zehnder index	87
8.2.	Filtered Hamiltonian Floer theory	89
8.3.	Constraints on full powers	94
8.4.	Non-contractible closed orbits	96
8.5.	Barcodes for Hamiltonian homeomorphisms	98
Chapter 9.	Symplectic persistence modules	99
9.1.	Liouville manifolds	99
9.2.	Symplectic persistence modules	101
9.3.	Examples of $\mathrm{SH}_*(U)$	103
9.4.	Symplectic Banach-Mazur distance	104
9.5.	Functorial properties	106
9.6.	Applications	109
9.7.	Computations	111
