

# Contents

Chapter 1. Introduction	1
1.1. Outline	2
1.2. On pedagogy	4
1.3. Acknowledgments	5
Chapter 2. Generalized Riemannian Geometry	7
2.1. Courant algebroids	7
2.2. Symmetries of the Dorfman bracket	12
2.3. Generalized metrics	20
2.4. Divergence operators	28
Chapter 3. Generalized Connections and Curvature	31
3.1. Generalized connections	31
3.2. Metric compatible connections	35
3.3. The classical Bismut connection	40
3.4. Curvature and the first Bianchi identity	43
3.5. Generalized Ricci curvature	47
3.6. Generalized scalar curvature	51
3.7. Generalized Einstein-Hilbert functional	56
Chapter 4. Fundamentals of Generalized Ricci Flow	65
4.1. The equation and its motivation	65
4.2. Examples	69
4.3. Maximum principles	73
4.4. Invariance group and solitons	76
4.5. Low dimensional structure	82
Chapter 5. Local Existence and Regularity	85
5.1. Variational formulas	85
5.2. Short time existence	89
5.3. Curvature evolution equations	92
5.4. Smoothing estimates	99
5.5. Results on maximal existence time	102
5.6. Compactness results for generalized metrics	106
Chapter 6. Energy and Entropy Functionals	109
6.1. Generalized Ricci flow as a gradient flow	109
6.2. Expander entropy and Harnack estimate	116
6.3. Shrinking Entropy and local collapsing	119
6.4. Corollaries on nonsingular solutions	122

Chapter 7. Generalized Complex Geometry	127
7.1. Linear generalized complex structures	127
7.2. Generalized complex structures on manifolds	134
7.3. Courant algebroids and pluriclosed metrics	142
7.4. Generalized Kähler geometry	148
Chapter 8. Canonical Metrics in Generalized Complex Geometry	165
8.1. Connections, torsion, and curvature	165
8.2. Canonical metrics in complex geometry	170
8.3. Examples and rigidity results	176
Chapter 9. Generalized Ricci Flow in Complex Geometry	183
9.1. Kähler-Ricci flow	183
9.2. Pluriclosed flow	185
9.3. Generalized Kähler-Ricci flow	190
9.4. Reduced flows	196
9.5. Torsion potential evolution equations	200
9.6. Higher regularity from uniform parabolicity	202
9.7. Metric evolution equations	207
9.8. Sharp existence and convergence results	210
Chapter 10. T-duality	219
10.1. Topological T-duality	219
10.2. T-duality and Courant algebroids	222
10.3. Geometric T-duality	225
10.4. Buscher rules and the dilaton shift	229
10.5. Einstein-Hilbert action	233
10.6. Examples	235
Bibliography	241
