

Contents

Preface	vii
Chapter 1. Basic concepts	1
Chapter 2. Carathéodory's theorem	9
Chapter 3. Radon's theorem	13
Chapter 4. Topological Radon	17
Chapter 5. Tverberg's theorem	21
Chapter 6. General position	27
Chapter 7. Helly's theorem	29
Chapter 8. Applications of Helly's theorem	33
Chapter 9. Fractional Helly	39
Chapter 10. Colourful Carathéodory	41
Chapter 11. Colourful Carathéodory again	45
Chapter 12. Colourful Helly	49
Chapter 13. Tverberg's theorem again	53
Chapter 14. Colourful Tverberg theorem	57
Chapter 15. Sarkaria and Kirchberger generalized	61
Chapter 16. The Erdős-Szekeres theorem	63
Chapter 17. The same type lemma	67
Chapter 18. Better bound for the Erdős-Szekeres number	71
Chapter 19. Covering number, planar case	77
Chapter 20. The stretched grid	81
Chapter 21. Covering number, general case	87
Chapter 22. Upper bound on the covering number	91

Chapter 23.	The point selection theorem	95
Chapter 24.	Homogeneous selection	99
Chapter 25.	Missing few simplices	101
Chapter 26.	Weak ε -nets	105
Chapter 27.	Lower bound on the size of weak ε -nets	109
Chapter 28.	The (p, q) theorem	113
Chapter 29.	The colourful (p, q) theorem	119
Chapter 30.	d -intervals	123
Chapter 31.	Halving lines, halving planes	127
Chapter 32.	Convex lattice sets	131
Chapter 33.	Fractional Helly for convex lattice sets	137
	Bibliography	143
	Index	147
