

Contents

Introduction	vii
1. Notation	x
2. Prerequisites	xii
3. Forms of Choice	xii
4. Partial orders	xii
Part 1. Preliminaries	1
Chapter 1. Determinacy	3
1. The Axiom of Determinacy	3
2. Turing Determinacy	5
Chapter 2. The Wadge Hierarchy	9
1. Lipschitz determinacy	9
2. Lipschitz degrees and Wadge degrees	12
3. Pointclasses	15
4. Universal sets	17
5. The height of the Wadge hierarchy	22
Chapter 3. Coding Lemmas	25
Chapter 4. Properties of Pointclasses	31
1. Separation and reduction	31
2. The prewellordering property	35
3. Prewellorderings and wellfounded relations	40
4. Closure under wellordered unions	42
Chapter 5. Strong Partition Cardinals	45
Chapter 6. Suslin Sets and Uniformization	53
1. Suslin sets	53
2. Uniformization	59
3. The Solovay sequence	60
Part 2. AD^+	63
Chapter 7. Ordinal Determinacy	65
Chapter 8. Infinity-Borel Sets	71
1. ∞ -Borel codes	71
2. Local ∞ -Borel codes	76

Chapter 9. Cone Measure Ultraproducts	83
1. S -cones	85
2. Measurable cardinals from cone measures	87
3. The degree order on sets of ordinals	88
4. Pointed trees	92
5. Coding ultrapowers	93
6. Forcing with positive sets	95
Chapter 10. Vopěnka Algebras	99
1. The Vopěnka algebra	99
2. Codes for projections, and Uniformization	104
3. The Vopěnka algebra for ∞ -Borel sets	108
Chapter 11. Suslin Sets and Strong Codes	115
1. Generic codes	115
2. Producing strong generic codes	119
3. ∞ -Borel representations from Uniformization	121
4. Closure of the Suslin cardinals	124
Chapter 12. Scales from Uniformization	127
1. Ordinal determinacy in the codes	127
2. Boundedness for ∞ -Borel relations	132
3. Becker's argument	135
Chapter 13. Real Determinacy from Scales	143
1. Weakly homogeneous trees	143
2. Normal measures on $\mathcal{P}_{\aleph_1}(\lambda)$	149
3. AD implies $\text{AD}_{\mathbb{R}}$ if all sets of reals are Suslin	152
Questions	157
Bibliography	159
Index	163
