

Contents

Preface	v
1 Problems	1
1.1 Junior Problems	3
1.2 Senior Problems	17
1.3 Undergraduate Problems	31
1.4 Olympiad Problems	46
2 Solutions	61
2.1 Junior Solutions	63
2.2 Senior Solutions	121
2.3 Undergraduate Solutions	202
2.4 Olympiad Solutions	291
3 Articles	391
3.1 Concyclicities in Tucker-like Configurations	393
3.2 Szemerédi-Trotter: Polynomials and Incidences	403
3.3 Coefficients and Roots of Polynomials	408
3.4 A New Method About For Polynomial Roots and the Arithmetic-Geometric Mean Inequality to Solve Olympiad Problems	416
3.5 A Characterization of the Parallelogram	432
3.6 A Nice Theorem on Mixtilinear Incircles	437
3.7 A Fine Use of Transformations	444

3.8	About a Fibonacci Problem	453
3.9	Introduction to the Hook Length Formula	457
3.10	Properties of a Configuration of Repeatedly Reflected Points over Reflection-Determined Lines	462
3.11	Rational Bounds for the Logarithm Function with Applications	471
3.12	A Special Point on the Median	478
3.13	A Generalization of Napoleon's Theorem	491
3.14	A Generalization of the Rearrangement Inequality	503
3.15	A Weighted Power Lessels-Pelling Inequality	508
	Problem Author Index	513
	Article Author Index	515
