

# Contents

Preface . . . . .	vii
1 On a Class of Sums Involving the Floor Function . . . . .	1
2 On a Number Theory Problem: Chasing a Red Herring . . . . .	5
3 Equiangular Polygons: An Algebraic Approach . . . . .	13
4 A Tetrahedron Whose Faces Have Equal Area Is “Equifacial” . . . . .	23
5 Best Polynomial Estimates in a Triangle . . . . .	31
6 About an Old Romanian TST Problem . . . . .	39
7 An Unexpected Application of the Cauchy-Schwarz Inequality . . . . .	49
8 On a Diophantine Equation and its Ramifications . . . . .	57
9 On Some Elementary Inequalities . . . . .	67
10 A Note on the Malfatti Problem . . . . .	75
11 On a Property of the Primitive Roots of Unity Leading to the Evaluation of Ramanujan’s Sums . . . . .	83
12 Linear Approximation Implies Unique Solution . . . . .	93
13 The Sequence $(\{n^d\alpha\})$ is Dense in $[0, 1]$ : An Elementary Proof . . . . .	101
14 Newton and Midpoints of Diagonals of Circumscribable Quadrilaterals . . . . .	107
15 On a Class of Functional Equations . . . . .	115
16 Two Proofs of Cayley’s Theorem . . . . .	127
17 The best constant for an inequality from Mathematical Reflections . . . . .	133
18 Equations with Solution in Terms of Fibonacci and Lucas Sequences . . . . .	141

19	Quadratic Forms, Chebyshev Polynomials, and Geometric Inequalities . . . . .	149
20	Napoleon Polygons . . . . .	159
21	On Consecutive Integers Divisible by the Number of their Divisors . . . . .	167
