This volume consists of papers dedicated to José Antonio de la Peña
on the occasion of his 60th birthday.

Contents

Preface	ix
List of Talks	xi
Lectures on split-by-nilpotent extensions	
I. ASSEM	1
A note on sequential walks	
I. ASSEM, M. J. REDONDO, and R. SCHIFFLER	37
A characterization of representation infinite quiver settings	
G. BOBIŃSKI	51
Dualities for modules of finite projective dimension	
B. HUISGEN-ZIMMERMANN and M. SAORÍN	61
Frieze varieties are invariant under Coxeter mutation	
K. IGUSA and R. SCHIFFLER	103
On tame strongly simply connected algebras	
S. KASJAN and A. SKOWROŃSKI	117
A remark on Hochschild cohomology and Koszul duality	
B. KELLER	131
Thick subcategories of the stable category of modules over the exterior algebra	
O. KERNER and D. ZACHARIA	137
Finite direct sums of cyclic embeddings	
J. KOSAKOWSKA and M. SCHMIDMEIER	159
The algebraic theory of fuchsian singularities	
H. LENZING	171
Cycle-finite modules over artin algebras	
P. MALICKI and A. SKOWROŃSKI	191
Piecewise hereditary incidence algebras	
E. N. MARCOS and M. MOREIRA	213
Derived categories of gentle algebras and surface dissections	
P.-G. PLAMONDON	227
Socle deformations of selfinjective orbit algebras of tilted type	
A. SKOWROŃSKI and K. YAMAGATA	239

Preface

The Seventh ARTA (“Advances in Representation Theory of Algebras”) was held at the Instituto de Matemáticas de la UNAM (Universidad Nacional Autónoma de México) in Mexico City from the 24th to the 28th of September 2018. It was dedicated to our colleague and friend José Antonio de la Peña on the occasion of his 60th birthday.

For over thirty-five years José Antonio has been one of the prominent figures in the representation theory of algebras. His work on topics as diverse as covering theory, tame algebras, the use of quadratic forms in representation theory, the spectral theory of graphs and others have inspired, and continue to inspire, several generations of mathematicians. He was also active in the chemical applications of the theory and in the dissemination of mathematics. José Antonio has won an impressive series of national and international prizes and medals. His work has had an important impact on mathematics in Mexico, where he held, and still holds, prestigious administrative or honorary positions. José Antonio has always been willing to help young researchers from all countries and, as a consequence, had a strong influence on them. As a person, he is very generous, always ready to help those of his students or colleagues who experience difficulties.

This volume contains fourteen papers dedicated to José Antonio. We would like to express our deepest gratitude to the authors who submitted their contributions and to the referees for their kind assistance. We also wish to extend our gratitude to Véronique Hussin of the CRM and to Christine Thivierge of the AMS for their help in including this volume in the AMS Contemporary Mathematics series.

While this volume was being prepared, we have learned with deep sorrow that our colleague and close friend Andrzej Skowroński has passed away on the 22nd of October, 2020 in Torun, after an infection with Covid-19. This marks the loss of an excellent friend, and a brilliant mathematician in our field. He was one of the founders of the ARTA series of conferences and is coauthor of three papers in this volume, as well as a friend and close collaborator of José Antonio de la Peña, to whom this volume is dedicated .

List of Talks

Advances in Representation Theory of Algebras VII

- Helmut Lenzing, Universität Paderborn, Germany
Working with José Antonio
- Andrea Solotar, Universidad de Buenos Aires, Argentina
The Gerstenhaber structure of Hochschild cohomology
- Ralf Schiffler, University of Connecticut, USA
Frieze varieties: A characterization of the finite-tame-wild trichotomy for acyclic quivers
- Gordana Todorov, Northeastern University, USA
Cyclic posets and triangulation clusters
- Eduardo do Nascimento Marcos, Universidade de São Paulo, Brazil
Hochschild-Mitchell (co)homology of skew categories and of Galois coverings
- Birge Huisgen-Zimmermann, University of California, Santa Barbara, USA
Truncated path algebras, a geometric and homological stepping stone. Part I
- Ken Goodearl, University of California, Santa Barbara, USA
Truncated path algebras, a geometric and homological stepping stone. Part II
- Bernhard Keller, Université Paris Diderot - Paris 7
Koszul duality and Hochschild cohomology
- Lidia Angeleri-Hügel, Università degli Studi di Verona, Italy
Comparing localizations of rings
- Thomas Brüstle, Bishop's University and Université de Sherbrooke, Québec, Canada.
Matrix reduction and exact structures
- Raymundo Bautista, CCM-UNAM, Mexico
Representations of bocses and A_∞ -modules
- Pierre-Guy Plamondon, Université de Paris-Sud XI, France
Derived categories of gentle algebras and surface dissections
- Sonia Trepode, Universidad Nacional de Mar del Plata, Argentina
The representation dimension of selfinjective algebras of tilted type
- Changchang Xi, Capital Normal University, China
Derived decompositions of abelian categories

Henning Krause, Universität Bielefeld, Germany
The Morita theory for derived categories revisited

Grzegorz Bobiński, Nicolaus Copernicus University, Poland
Birkhoff varieties

Kunio Yamagata, Tokyo University of Agriculture and Technology, Japan
Selfinjective orbit algebras induced from repetitive algebras

Piotr Malicki, Nicolaus Copernicus University, Poland
Cycle-finite module categories

Gustavo Jasso, Universität Bonn, Germany
Higher-dimensional Auslander algebras of type A and the higher-dimensional Waldhausen S-constructions

Stanislaw Kasjan, Nicolaus Copernicus University, Poland
Tame strongly simply connected algebras

The Centre de Recherches Mathématiques (CRM) was created in 1968 to promote research in pure and applied mathematics and related disciplines. Among its activities are special theme years, summer schools, workshops, postdoctoral programs, and publishing. The CRM receives funding from the Natural Sciences and Engineering Research Council (Canada), the FRQNT (Québec), the NSF (USA), and its partner universities (Université de Montréal, McGill, UQAM, Concordia, Université Laval, Université de Sherbrooke and University of Ottawa).

CONM 761

The Seventh ARTA (“Advances in Representation Theory of Algebras VII”) conference took place at the Instituto de Matemáticas of the Universidad Nacional Autónoma de México, in Mexico City, from September 24–28, 2018, in honor of José Antonio de la Peña’s 60th birthday.

Papers in this volume cover topics Professor de la Peña worked on, such as covering theory, tame algebras, and the use of quadratic forms in representation theory. Also included are papers on the categorical approach to representations of algebras and relations to Lie theory, Cohen–Macaulay modules, quantum groups and other algebraic structures.
