

ADDENDUM TO: ON EXISTENCE AND RIGIDITY OF ISOMETRIC IMMERSIONS

BY R. H. SZCZARBA

Communicated November 4, 1969

It has been pointed out to me that the existence theorem of [2] is a reformulation of the ambient space euclidean case of Theorem 5, p. 202 of Bishop and Crittenden [1]. I am also told that, although not stated in [1], the rigidity theorem of [2] can be proved as a consequence of Theorem 5. Of course, the approach of [2] is quite different from that of Bishop and Crittenden. In particular, from the point of view of [2], the rigidity theorem is an easy computation.
