

JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and has a department of research announcements. Invited addresses offered for publication should be sent to HANS F. WEINBERGER, Department of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455. Book reviews should be sent to GIAN-CARLO ROTA, Department of Mathematics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139. Research announcements should be sent directly to a member of the Council of the American Mathematical Society. All other correspondence about research announcements should be sent to MURRAY H. PROTTER, Department of Mathematics, University of California, Berkeley, California 94720. A list of members of the Council for 1972 is listed on the inside back cover. All other communications to the editors should be sent to the Managing Editor, MURRAY H. PROTTER.

The first page of each article, including research announcements, that is submitted for publication should bear a *descriptive title* which should be short, but informative. Useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Before the first footnote, there should be the *AMS (MOS) subject classification numbers* representing the primary and secondary subjects of the article. If a list of *key words and phrases* describing the subject matter of the article is included, it will also be printed as a footnote on the first page. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to MATHEMATICAL REVIEWS, index to volume 39 (1970). See the June 1970 NOTICES for more details, as well as illustrative examples. The subscription price is \$12 per annual volume of six numbers.

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

BULLETIN: BACKLOG. NONE. 90% of the papers currently being communicated by the editors will be published in 5-6 months.

Proceedings of the American Mathematical Society is a monthly journal devoted entirely to research in pure and applied mathematics, principally to the publication of original papers of moderate length. A department called Shorter Notes was established for the purpose of publishing very short papers of an unusually elegant and polished character for which there is normally no other outlet. Papers in algebra, number theory, and algebraic geometry should be sent to GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520 or to JOSEPH J. ROTMAN, Department of Mathematics, University of Illinois, Urbana, Illinois 61801; in modern or classical analysis to JACOB FELDMAN, Department of Mathematics, University of California, Berkeley, California 94720, to LEE A. RUBEL, Department of Mathematics, University of Illinois, Urbana, Illinois 61801 or to ALLEN L. SHIELDS, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104; in set-theoretic and general topology to W. WISTAR COMFORT, Department of Mathematics, Wesleyan University, Middletown, Connecticut 06457; in algebraic topology and all other geometry to GLEN E. BREDON, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903; in applied mathematics, differential equations, and related areas of analysis to FRED G. BRAUER, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706; in probability, statistics, and related fields to JAMES D. KUELBS, Department of Mathematics, 213 Van Vleck Hall, University of Wisconsin, Madison, Wisconsin 53706; in logic, set theory, and related areas to ROBERT I. SOARE, Department of Mathematics, University of Illinois at Chicago Circle, Chicago, Illinois 60680; in combinatorics and related areas of discrete mathematics to JAY R. GOLDMAN, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455. All other communications should be addressed to the Managing Editor, JOSEPH J. ROTMAN.

Mathematics of Computation is a quarterly journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices, and other aids to computation. In addition, reviews and notes in these and related fields are published. Prospective publications should be sent to the Editor, EUGENE ISAACSON, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012.

Howard Osborn. PL sheaves and their characteristic classes	787
F. Laudenbach. On the 2-spheres in a 3-manifold	792
Carlos Julio Moreno. Prime number theorems for the coefficients of modular forms	796
Hudson V. Kronk and John Mitchem. The entire chromatic number of a normal graph is at most seven	799
I. Kra and B. Maskit. Involutions on Kleinian groups	801
P. M. Fitzpatrick. A -proper mappings and their uniform limits . .	806
Charles Ford. Pure, normal maximal subfields for division algebras in the Schur subgroup	810
James A. Morrow. Compactifications of C^2	813
Michael Shub. Structurally stable diffeomorphisms are dense . .	817
A. Iarrobino. Punctual Hilbert schemes	819
Martin E. Walter. The dual group of the Fourier-Stieltjes algebra .	824
Martin L. Karel. Fourier coefficients of certain Eisenstein series	828
C. U. Jensen. On $\text{Ext}_R^1(A, R)$ for torsion-free A	831
E. C. Zachmanoglou. Foliations and the propagation of zeroes of solutions of partial differential equations	835
T. Walsh. On the summation of conjugate Fourier integrals of functions of several variables	840
Lawrence J. Dickson. Estimates for the Szegö and Poisson kernels of sufficiently rounded tube domains	844
T. A. Chapman. Characterizing shapes of compacta	847
Alan T. Huckleberry and Ricardo Nirenberg. On a class of complex spaces intermediate to Stein and compact	852
Robert A. Rubin. Absolutely torsion-free rings	854
Charles W. Neville. Invariant subspaces of Hardy classes on in- finitely connected plane domains	857
R. James Milgram. On the Haefliger knot groups	861
R. E. Greene and H. Wu. Curvature and complex analysis. II	866
Robin Harte. The spectral mapping theorem in several variables	871

Members of the Council for 1972

Richard D. Anderson, Steve Armentrout, Michael Artin, Michael F. Atiyah, Robert G. Bartle, Hyman Bass, Paul T. Bateman, Fred G. Brauer, Glen E. Bredon, William Browder, Edgar H. Brown, Jr., R. Creighton Buck, Alberto P. Calderón, George F. Carrier, S. S. Chern, W. Wistar Comfort, Morton L. Curtis, Jacob Feldman, Frederick W. Gehring, Oscar Goldman, Walter H. Gottschalk, Orville G. Harrold, Jr., Philip Hartman, Eugene Isaacson, Nathan Jacobson, Harry Kesten, Alistair H. Lachlan, C. C. Lin, Saunders Mac Lane, W. T. Martin, Calvin C. Moore, P. S. Mostert, Richard S. Pierce, Everett Pitcher, Murray H. Protter, Dock S. Rim, Alex Rosenberg, Kenneth A. Ross, Gian-Carlo Rota, Joseph J. Rotman, Lee A. Rubel, Mary Ellen Rudin, Robert T. Seeley, George B. Seligman, James B. Serrin, Edwin H. Spanier, Elias M. Stein, Shlomo Sternberg, Dorothy Maharam Stone, Olga Taussky Todd, François Trèves, Hans F. Weinberger, Bertram Yood.

CONTENTS

September, 1972

Gerald E. Sacks. The differential closure of a differential field . . .	629
Freeman J. Dyson. Missed opportunities	635
B. Mazur. Frobenius and the Hodge filtration	653
Benjamin Weiss. The isomorphism problem in ergodic theory . . .	668
Wojbor A. Woyczyński. Review of "Best approximation in normed linear spaces by elements of linear subspaces," by Ivan Singer . .	685
Lawrence Corwin. Review of "Algebraic number theory", by Serge Lang	690
Report of the treasurer	694
James K. Brooks and Paul W. Lewis. Operators on function spaces	697
Jerry Johnson. Lipschitz function spaces for arbitrary metrics . .	702
Joel Roberts. Singularity subschemes and generic projections . .	706
Bang-Yen Chen. Surfaces with parallel mean curvature vector . . .	709
A. Hajnal and I. Juhász. Two consistency results in topology . . .	711
William B. Gordon. Physical variational principles which satisfy the Palais-Smale condition	712
Murray Gerstenhaber. The fundamental form of a finite purely inseparable field extension	717
R. Michael Range and Yum-Tong Siu. Uniform estimates for the $\bar{\partial}$ -equation on intersections of strictly pseudoconvex domains .	721
Michel André. Nonnoetherian complete intersections	724
Michael C. Reed and Barry Simon. A spectral mapping theorem for tensor product of unbounded operators	730
Melvyn S. Berger. On Hermitian structures of prescribed non-positive Hermitian scalar curvature	734
Shigeru Iitaka. On algebraic varieties whose universal covering manifolds are complex affine 3-spaces	737
Melvyn S. Berger and Martin Schechter. On the solvability of semi-linear operator equations and elliptic boundary value problems	741
John J. Walsh. Fiber preserving cellular decompositions	746
O. S. Rothaus. Study of the permanent conjecture and some generalizations	749
Jean-Pierre Gossez. Boundary value problems for quasilinear elliptic equations with rapidly increasing coefficients	753
F. Alberto Grünbaum. On the existence of a "wave operator" for the Boltzmann equation	759
Joel M. Cohen. A note on Poincaré 2-complexes	763
David Pincus. Independence of the prime ideal theorem from the Hahn Banach theorem	766
Vlastimil Dlab and Claus Michael Ringel. Balanced local rings with commutative residue fields	771
Yum-Tong Siu. A Thullen type extension theorem for positive holomorphic vector bundles	775
J. A. Goguen. Minimal realization of machines in closed categories	777
D. W. Anderson. A generalization of the Eilenberg-Moore spectral sequence	784
