JOURNALS PUBLISHED BY
THE AMERICAN MATHEMATICAL SOCIETY

TRANSLATION JOURNALS

Soviet Mathematics–Doklady is a bimonthly translation journal containing the entire pure mathematics section of the DOKLADY AKADEMII NAUK SSSR.

Mathematics of the USSR–Izvestiya, a bimonthly journal, is a cover-to-cover translation of IZVESTIYA AKADEMII NAUK SSSR SERIYA MATEMATICHESKAYA.

Mathematics of the USSR–Sbornik is a bimonthly journal and is a cover-to-cover translation of MATEMATICHESKII SBORNIK (NOVAYA SERIYA).

Theory of Probability and Mathematical Statistics is the cover-to-cover translation into English of the TEORIYA VEROYATNOSTEI I MATEMATICHESKAYA STATISTIKA.

Transactions of the Moscow Mathematical Society is a translation into English of TRUDY MOSKOVSKOGO MATEMATICHESKOGO OBSHCHESTVA.

Proceedings of the Steklov Institute of Mathematics is a translation of AKADEMIYA NAUK SSSR TRUDY ORDENA LENINA MATEMATICHESKOGO INSTITUTA IMENI V. A. STEKLOVA.

RESEARCH JOURNALS

Submission information for these journals is included in the April and October issues of this BULLETIN.

Bulletin (New Series) of the American Mathematical Society is a quarterly journal which contains research-expository papers, research announcements, and reviews of books on advanced mathematics.

Journal of the American Mathematical Society is devoted to research articles of the highest quality in all areas of pure and applied mathematics.

Mathematics of Computation is a quarterly journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices, and other aids to computation.

Memoirs of the American Mathematical Society is a bimonthly journal constituting a series of paperbound research tracts which are of the same general character as the papers published in the TRANSACTIONS.

Proceedings of the American Mathematical Society is a monthly journal devoted entirely to research in pure and applied mathematics, principally to the publication of original papers of moderate length. A department called Shorter Notes was established for the purpose of publishing very short papers of an unusually elegant and polished character for which there is normally no other outlet.

Transactions of the American Mathematical Society is a monthly journal devoted entirely to research in pure and applied mathematics and, in general, includes longer papers than those in the PROCEEDINGS.

OTHER JOURNALS

Abstracts of Papers Presented to the American Mathematical Society contains abstracts of invited hour addresses, of papers presented in special sessions or in sessions for contributed papers, and of papers presented to the Society “by title”.

Current Mathematical Publications, issued triweekly, contains a subject-classified index of papers and books being published currently in mathematics.

Mathematical Reviews is a monthly journal devoted to abstracts and reviews of the current mathematical literature of the world. Abstracts and reviews are grouped according to the 1980 Mathematics Subject Classification scheme (1985 Revision). The subscription includes an annual author and subject index.

Notices of the American Mathematical Society, published ten times a year, contains programs and reports of the meetings of the Society, reports on Society business, communications to the membership, and news items and information of interest to the mathematical community.

EDITORS

EDITORIAL BOARD FOR RESEARCH-EXPOSITORY ARTICLES

Lenore Blum  Richard S. Palais
Morris W. Hirsch  David Vogan
Chairman  Alan Weinstein
Barry Mazur  Guido L. Weiss

EDITORIAL BOARD FOR RESEARCH ANNOUNCEMENTS

William B. Arveson  Victor W. Guillemin
Spencer Bloch  Roger E. Howe
Gregory L. Cherlin  Chairman
Percy Alec Deift  Frank S. Quinn III
Michael D. Fried  Peter B. Shalen
Ronald L. Graham  Nolan R. Wallach

BOOK REVIEWS EDITOR: Murray Protter
MANAGING EDITOR: Morris W. Hirsch

MANUSCRIPT, PROOF, AND COPYING INFORMATION

MANUSCRIPT

Articles submitted for publication should be typewritten and double-spaced. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand-drawn symbols are satisfactory if clearly done; special instructions for the typesetter, when necessary, should be included on a separate sheet.

For Research-Expository Articles and Research Announcements, the first footnote should include subject classification numbers representing the primary and secondary subjects of the article. The 1980 Mathematics Subject Classification (1985 Revision) can be found in the annual subject index volumes of Mathematical Reviews.

To encourage the submission of manuscripts in electronic form using \TeX{} and the \AMS-\TeX{} macro package, the Executive Committee of the Council has adopted a policy that allows for accelerating the publication date of such manuscripts by as much as 20 weeks, which is approximately equal to the time normally needed by the Society for copyediting, typesetting, and proofreading an average manuscript.

GALLEY PROOF

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

COPYING AND REPRINTING

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the

License or copyright restrictions may apply to redistribution; see https://www.ams.org/journal-terms-of-use
OFFPRINTS AND ADDRESS CHANGES

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940.

COPYRIGHT TRANSFER AGREEMENT

The signing of a Copyright Transfer Agreement is a requirement of publication in the BULLETIN. A copy of the agreement is sent to the author upon receipt of a manuscript in the Providence Office of the Society; in case of joint authors, a copy is sent to each author. Authors are urged to return the form immediately to prevent delays in processing and publishing the manuscript. The 1984 edition of the Manual for Authors has a description of Society policy concerning copyright and a copy of the agreement.

PUBLICATION CHARGES

There are no page charges assessed on papers published in the BULLETIN.

REMARKS ON RESEARCH ANNOUNCEMENTS

The BULLETIN of the American Mathematical Society is the only research mathematical journal received as a privilege of membership in the Society. Its circulation is larger, by an order of magnitude, than that of most journals, in particular specialized journals. Thus, a BULLETIN Research Announcement should contain results of sufficient depth and import to be of interest to a wide mathematical audience. And, consequently, beyond basic mathematical standards, Research Announcements should meet high standards for style.

Beyond general exhortations to write clearly and precisely, the following more specific suggestions are offered.

1. Keep in mind that you are writing for as wide an audience as possible. Avoid the shorthand and jargon of your area as much as you can. Carefully introduce the terminology needed to understand the main results. If space considerations prevent a full development of the concepts, delineate clearly what you are not explaining and provide references to it in the literature. Consider an Announcement an opportunity to explain your area of research to the world at large.

2. Do not confuse a graceful style with a sloppy style. Although a light touch or a colorful phrase can relieve the tedium of definitions, excessive breeziness and imprecision confuse readers who have only a casual knowledge of the subject. We say this not to encourage pedantic writing but to discourage obscure writing. Your results should be stated precisely with all important concepts and notations made clear.

3. Ask a colleague to review your manuscript before you submit it. Even better, ask two colleagues, one whose work is very close to yours, one whose work is farther away. (If you can’t get two people you know to read your work before it is published, how many will want to read it after?) Ask for suggestions on how to improve the readability.
Stationary sequences and random fields by Murray Rosenblatt—Reviewed by G. Kallianpur .................................................. 133
Free rings and their relations by P. M. Cohn—Reviewed by Jacques Lewin 139
Sphere packings, lattices and groups by J. H. Conway and N. J. A. Sloane—
Reviewed by Richard K. Guy ........................................... 142
Foundations of analysis over surreal number fields by N. L. Alling—
Reviewed by P. M. Cohn .................................................. 148
Theory of topological structures. An approach to categorical topology by
Gerhard Preuss—Reviewed by Walter Tholen ................................ 149
Multidimensional Brownian excursions and potential theory by K. Burdzy—
Reviewed by Thomas S. Salisbury ........................................ 152
Riemannian geometry by S. Gallot, D. Hulin, and J. Lafontaine—Reviewed
by Robert E. Greene ...................................................... 157
The complex analytic theory of Teichmüller spaces by Subhashis Nag—
Reviewed by William Abikoff ........................................... 162
Extensions and absolutes of Hausdorff spaces by Jack R. Porter and
R. Grant Woods—Reviewed by Melvin Henriksen .......................... 168
Introduction to Arakelov theory by Serge Lang—Reviewed by Joseph H.
Silverman ........................................................................ 171
Calculus on Heisenberg manifolds by Richard Beals and Peter Greiner—
Reviewed by Nancy K. Stanton ........................................... 177
An introduction to independence for analysts by H. G. Dales and W. H.
Woodin—Reviewed by M. Alain Louveau ................................ 179
Random polynomials by A. T. Bharucha-Reid and M. Sambandham—
Reviewed by G. Samal ...................................................... 182
Operator theory and arithmetic in $H^\infty$ by Hari Bercovici—Reviewed by
Pei Yuan Wu ...................................................................... 184
Stratified Morse theory by M. Goresky and R. MacPherson—Reviewed
by K. H. Fieseler ............................................................. 186
Introduction to superanalysis by Felix Alexandrovich Berezin—Reviewed
by Mitchell J. Rothstein .................................................... 189
Gauge field theory and complex geometry by Yuri I. Manin—Reviewed by
Claude LeBrun .............................................................. 192
Infinite-dimensional dynamical systems in mechanics and physics by Roger
Teman—Reviewed by John Guckenheimer ................................ 196
Orthogonality and spacetime geometry by Robert Goldblatt—Reviewed by
A. D. Taimanov and Alexander K. Guts ................................ 199
Partially ordered abelian groups with interpolation by K. R. Goodearl—
Reviewed by George A. Elliott ........................................... 200
Research-Expository Papers

On a theory of computation and complexity over the real numbers: NP-completeness, recursive functions and universal machines by Lenore Blum, Mike Shub and Steve Smale .......................... 1

Research Announcements

Contributions to the K-theory of C*-algebras of Toeplitz and singular integral operators by Paul S. Muhly, Ian F. Putnam and Jingbo Xia 47
Conjecture “Epsilon” for weight \( k > 2 \) by Bruce W. Jordan and Ron Livné 51
Iteration theory and inequalities for Kleinian groups by F. W. Gehring and G. J. Martin ........................................... 57
Galois representations for Hilbert modular forms by D. Blasius and J. Rogawski ...................................................... 65
Every three-sphere of positive Ricci curvature contains a minimal embedded torus by Brian White ........................................ 71
AD and the very fine structure of \( L(\mathbb{R}) \) by Steve Jackson ...................... 77
Eta-invariants and von Neumann algebras by R. G. Douglas, S. Hurder and J. Kaminker .................................................. 83
A nonvanishing theorem for derivatives of automorphic L-functions with applications to elliptic curves by Daniel Bump, Solomon Friedberg, and Jeffrey Hoffstein ............................... 89

Book Reviews

Class field theory by Jürgen Neukirch; Local class field theory by Kenkichi Iwasawa—Reviewed by Michiel Hazewinkel .................. 95
Multiphase averaging for classical systems, with applications to adiabatic theorems by Pierre Lochak and Claude Meunier—Reviewed by Philip Holmes ...................................................... 101
Spectral theory of linear differential operators and comparison algebras by H. O. Cordes—Reviewed by Alexander Dynin ............... 105
Iwasawa theory of elliptic curves with complex multiplication by Ehud de Shalit—Reviewed by Karl Rubin .............................. 108
Ergodic theory of random transformations by Yuri Kifer—Reviewed by Peter Walters .......................................................... 113
The homotopy index and partial differential equations by Krzysztof P. Rybakowski—Reviewed by Jean Mawhin ............................ 118
Quadratic and Hermitian forms by Winfried Scharlau—Reviewed by T. Y. Lam ............................................................... 121
Collected mathematical papers of Jacob Nielsen edited by Vagn Lundsgaard Hansen—Reviewed by Jane Gilman ............................ 125
Basic hypergeometric series and applications by Nathan J. Fine—Reviewed by Richard Askey ................................................ 130
