INDEX TO VOLUME 55 (2018)

BULLETIN ARTICLES

Baker, Matthew.  *Hodge theory in combinatorics*, 57
Bárány, Imre, and Pablo Soberón.  *Tverberg’s theorem is 50 years old: A survey*, 459
Bieri, Lydia.  *Black hole formation and stability: A mathematical investigation*, 1
Corwin, Ivan.  *Commentary on “Longest increasing subsequences: from patience sorting to the Baik–Deift–Johansson theorem” by David Aldous and Persi Diaconis*, 363
Dyatlov, Semyon, and Colin Guillarmou.  *Afterword: Dynamical zeta functions for Axiom A flows*, 337
Friedlander, Eric M.  *In memoriam: Vladimir Voevodsky*, 403
Friedlander, Susan.  *Introductory comments for the 2018 Editors’ Choice issue*, 325
Gamba, Irene M.  *Commentary: Three decades after Cathleen Synge Morawetz’s paper “The mathematical approach to the sonic barrier”*, 347
Goresky, Mark.  *Commentary on “Numbers of solutions of equations in finite fields” by André Weil*, 327
Grayson, Daniel R.  *An introduction to univalent foundations for mathematicians*, 427
Guillarmou, Colin.  See Dyatlov, Semyon
Guralnick, Robert M.  *Commentary on “A brief history of the classification of the finite simple groups” by Ronald Solomon*, 451
Harbater, David, Andrew Obus, Rachel Pries, and Katherine Stevenson.  *Abhyankar’s conjectures in Galois theory: Current status and future directions*, 239
Hauser, Herwig.  *Corrigendum to “The classical Artin approximation theorems”*, 289
Holmes, Susan.  *Statistical proof? The problem of irreproducibility*, 31
Kra, Bryna.  *Commentary on “Ergodic theory of amenable group actions”: Old and new*, 343
Levine, Marc.  *Vladimir Voevodsky—An appreciation*, 405
Mazur, B.  *Afterword to the article “Arithmetic on curves”*, 353
Minicozzi, William P., II.  *Commentary on “Nonunique tangent maps at isolated singularities of harmonic maps” by Brian White*, 359
Obus, Andrew.  See Harbater, David
Pries, Rachel.  See Harbater, David
Schlenk, Felix.  *Symplectic embedding problems, old and new*, 139
Soberón, Pablo.  See Bárány, Imre
Solomon, Ron.  *Afterword to the article “A brief history of the classification of the finite simple groups”*, 453
Soundararajan, K.  *Tao’s resolution of the Erdős discrepancy problem*, 81
Stevenson, Katherine.  See Harbater, David
Totaro, Burt.  *Commentary on “Arithmetic on curves” by Barry Mazur*, 351
Wang, Zhenghan.  See Rowell, Eric C.
Zworski, Maciej.  *Commentary on “Differentiable dynamical systems” by Stephen Smale*, 331

MATHEMATICAL PERSPECTIVES

Alexanderson, Gerald L., and Leonard F. Klosinski.  *About the cover: Are “old” mathematics books “collectible”?*, 93
        *About the cover: Do opera omnia have a future?*, 295
Klosinski, Leonard F.  See Alexanderson, Gerald L.
Mueller, Julia.  *On the genesis of Robert P. Langlands’ conjectures and his letter to André Weil*, 493

BOOK REVIEWS

Chief Editor: Susan Friedlander

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/bull.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish form to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

The Bulletin publishes expository articles on contemporary mathematical research written in a way that gives insight to mathematicians who may not be experts in the particular topic. All articles submitted to this journal are peer reviewed. The AMS has a single-blind peer-review process in which the reviewers know who the authors of the manuscripts are, but the authors do not have access to information on who the peer reviewers are.

The first page must consist of a short descriptive title, followed by an abstract that summarizes the article in language suitable for mathematicians in the general area. The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be a brief technical description of the new material.

A well-written expository article will include motivating problems and examples, some indication of the historical development of the subject, and of course the results and open problems that make it an interesting and exciting area of mathematics. In most cases proofs should be at most briefly sketched, and there should be a good bibliography whose main aim is to help those wishing to pursue the subject further. Articles reporting on recent mathematical research should include an introductory section addressed to nonexperts describing the motivation, background, and significance of the results announced. Following the statement of results, there should be a sketch of proofs that may be addressed to experts, including elements of the proof which are novel. References should be given so that an interested reader can find the details.
Each paper should include a footnote with the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/. When the manuscript is submitted, authors should supply the Editor with electronic addresses if available.

Mathematicians giving AMS lectures (Gibbs Lectures, Colloquium Lectures, and Progress in Mathematics Lectures) or invited hour addresses at meetings of the Society are encouraged to write up their lectures using the guidelines for expository articles described above. Submissions will be reviewed by the Editorial Board for Articles, and authors will be notified of its decision.

Book Reviews are by invitation only. The first page must include the title of the book being reviewed; the name(s) of the author(s); publisher; city of publication; year of publication; number of pages, including front matter; price if known; and ISBN. There should also be a footnote with the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the book under review. The classifications are accessible from www.ams.org/msc/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Initial submission. Authors of articles may submit manuscripts for consideration as PDF files at http://www.ams.org/peer-review/submission.pl. Manuscripts must be a single file with images embedded. Authors will have a chance to view the manuscript and data entered before releasing the manuscript into the system. Two-digit 2010 Mathematics Subject Classification numbers are included in a pull-down menu; classifications are accessible from http://www.ams.org/msc/. Complete author instructions are available at the site.

Authors who cannot supply a PDF file may submit a paper copy of their manuscript to Bulletin/Peer-Review Manuscript Submissions, 201 Charles Street, Providence, RI 02904-2213 USA. These submissions will be scanned into a PDF file and entered by AMS staff into the peer-review system. All the data required in the submission form must be provided to avoid delays in publishing the manuscript.

The Bulletin Chief Editor will be notified as new submissions arrive. The Editor will collect these submissions and assign them to subject area specialists.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in \LaTeX. To this end, the Society has prepared \LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the AMS Author Handbook, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \LaTeX style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for the Bulletin of the AMS from www.ams.org/bull/bullauthorpac.html. The AMS Author Handbook is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. Authors should indicate if the paper has been prepared using \LaTeX
or \LaTeX. Electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

The final file of an accepted article should also be sent by email to both bulletin@math.uic.edu and susan@math.northwestern.edu.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

**AMS policy on making changes to articles after publication.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions may be sent to bull-query@ams.org.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to bull-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.
