AN ADDENDUM TO 12,758

By Robert E. Dressler and Thomas Parker

Our purpose in this note is to observe that the result which we proved in [1] was previously announced by R. L. Graham in [2]. We are grateful to N. J. A. Sloane for pointing this out to us. He also informs us that Shen Lin (see [3]) has shown that 5,134,240 is the largest integer which cannot be expressed as a sum of distinct fourth powers.
