Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from `www.ams.org/journals/`. Subscription prices for Volume 75 (2006) are as follows: for paper delivery, $467 list, $374 institutional member, $420 corporate member, $304 member of CBMS organizations; $280 individual member; for electronic delivery, $420 list, $336 institutional member, $378 corporate member, $273 member of CBMS organizations, $252 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add $15 for surface delivery outside the United States and India; $18 to India. Expedited delivery to destinations in North America is $17; elsewhere $56.

Back number information. For back issues see the `www.ams.org/bookstore`.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to `reprint-permission@ams.org`.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 75, No. 256 October 2006

Carsten Carstensen, W. Liu, and N. Yan, A posteriori FE error control for p-Laplacian by gradient recovery in quasi-norm 1599
Jicheng Jin, Shi Shu, and Jinchao Xu, A two-grid discretization method for decoupling systems of partial differential equations 1617
Omar Lakkis and Charalambos Makridakis, Elliptic reconstruction and a posteriori error estimates for fully discrete linear parabolic problems 1627
Carlo Lovadina and Rolf Stenberg, Energy norm a posteriori error estimates for mixed finite element methods 1659
Gabriel N. Gatica and Francisco-Javier Sayas, An a priori error analysis for the coupling of local discontinuous Galerkin and boundary element methods 1675
Jayadeep Gopalakrishnan and Joseph E. Pasciak, The convergence of V-cycle multigrid algorithms for axisymmetric Laplace and Maxwell equations 1697
Volker Elling, A possible counterexample to well posedness of entropy solutions and to Godunov scheme convergence 1721
Bojan Popov and Ognian Trifonov, Order of convergence of second order schemes based on the minmod limiter 1735
Jianfeng Zhang, Rate of convergence of finite difference approximations for degenerate ordinary differential equations 1755
Robert Sinclair and Minoru Tanaka, Jacobi's last geometric statement extends to a wider class of Liouville surfaces 1779
Christophe Berthon, Numerical approximations of the 10-moment Gaussian closure 1809
Clément Mouhot and Lorenzo Pareschi, Fast algorithms for computing the Boltzmann collision operator 1833
Shuai Lu and Sergei V. Pereverzev, Numerical differentiation from a viewpoint of regularization theory 1853
Helmut Harbrecht and Rob Stevenson, Wavelets with patchwise cancellation properties 1871
Dirk Laurie and Johan de Villiers, Orthogonal polynomials for refinable linear functionals 1891
Yi Jin, On efficient computation and asymptotic sharpness of Kalantari's bounds for zeros of polynomials 1905
Peter Mathé and Sergei V. Pereverzev, Regularization of some linear ill-posed problems with discretized random noisy data 1913
Dorin Ervin Dutkay and Palle E. T. Jorgensen, Iterated function systems, Ruelle operators, and invariant projective measures 1931
Tatjana Eisner and Hans Zwart, Continuous-time Kreiss resolvent condition on infinite-dimensional spaces 1971
Ren-Cang Li, Lower bounds for the condition number of a real confluent Vandermonde matrix 1987
K. G. Hare and C. J. Smyth, The monic integer transfinite diameter .. 1997
S. Gurak, On the minimal polynomial of Gauss periods for prime powers . 2021

Thorsten Kleinjung, On polynomial selection for the general number field sieve 2037
Antonio Cafure and Guillermo Matera, Fast computation of a rational point of a variety over a finite field 2049

INDEX TO VOLUME 75 (2006)

Aguirre, Julián, Mikel Bilbao, and Juan Carlos Peral. *The trace of totally positive algebraic integers*, 385

Akrivis, Georgios, Charalambos Makridakis, and Ricardo H. Nochetto. *A posteriori error estimates for the Crank–Nicolson method for parabolic equations*, 511

Bai, Zhong-Zhi. *Structured preconditioners for nonsingular matrices of block two-by-two structures*, 791

Barnett, A. Ross. *See* Broughan, Kevin A.

Barrett, John W., Harald Garcke, and Robert Nürnberg. *Finite element approximation of a phase field model for surface diffusion of voids in a stressed solid*, 7

Barvinok, Alexander. *Computing the Ehrhart quasi-polynomial of a rational simplex*, 1449

Berend, Daniel, and Shahar Golan. *Littlewood polynomials with high order zeros*, 1541

Berthon, Christophe. *Numerical approximations of the 10-moment Gaussian closure*, 1809

Bilbao, Mikel. *See* Aguirre, Julián

Booker, Andrew R. *Quadratic class numbers and character sums*, 1481

Borwein, Peter, Stephen Choi, and Frank Chu. *An old conjecture of Erdős–Turán on additive bases*, 475

Boulton, Lyonell. *Limiting set of second order spectra*, 1367

Broughan, Kevin A., and A. Ross Barnett. *Linear law for the logarithms of the Riemann periods at simple critical zeta zeros*, 891

Bultheel, Adhemar. *See* Van Deun, Joris

Bürger, Raimund, Aníbal Coronel, and Mauricio Sepúlveda. *A semi-implicit monotone difference scheme for an initial-boundary value problem of a strongly degenerate parabolic equation modeling sedimentation-consolidation processes*, 91

Cafure, Antonio, and Guillermo Matera. *Fast computation of a rational point of a variety over a finite field*, 2049

Carlson, B. C. *Table of integrals of squared Jacobian elliptic functions and reductions of related hypergeometric R-functions*, 1309

Carrero, Jesús, Bernardo Cockburn, and Dominik Schötzau. *Hybridized globally divergence-free LDG methods. Part I: The Stokes problem*, 533

Carstensen, Carsten, and R. H. W. Hoppe. *Error reduction and convergence for an adaptive mixed finite element method*, 1033

Carstensen, Carsten, W. Liu, and N. Yan. *A posteriori FE error control for p-Laplacian by gradient recovery in quasi-norm*, 1599

Castro, Manuel, José M. Gallardo, and Carlos Parés. *High order finite volume schemes based on reconstruction of states for solving hyperbolic systems with nonconservative products. Applications to shallow-water systems*, 1103

Chen, Zhiming, and Guanghua Ji. *Sharp L^1 a posteriori error analysis for nonlinear convection-diffusion problems*, 43

Choi, Stephen. *See* Borwein, Peter

Chu, Delin, and Moody Chu. *Low rank update of singular values*, 1351

Chu, Frank. *See* Borwein, Peter

Chu, Moody. *See* Chu, Delin

Cockburn, Bernardo. *See* Carrero, Jesús

Contini, Scott, Ernie Croot, and Igor E. Shparlinski. *Complexity of inverting the Euler function*, 983

Cools, Ronald. *See* Nuyens, Dirk

Coronel, Aníbal. *See* Bürger, Raimund

Cougnard, Jean. *Normal integral bases for A_4 extensions of the rationals*, 485

Croot, Ernie. *See* Contini, Scott

Cuesta, Eduardo, Christian Lubich, and Cesar Palencia. *Convolution quadrature time discretization of fractional diffusion-wave equations*, 673

Cuyt, Annie, Jieqing Tan, and Ping Zhou. *General order multivariate Padé approximants for pseudo-multivariate functions*, 727

Demmel, James, and Plamen Koev. *Accurate and efficient evaluation of Schur and Jack functions*, 223

Díaz-Mendoza, C., P. González-Vera, M. Jiménez Paiz, and F. Cala Rodríguez. *Orthogonal Laurent polynomials corresponding to certain strong Stieltjes distributions with applications to numerical quadratures*, 281

Draziotis, Konstantinos, and Dimitrios Poulakis. *Practical solution of the Diophantine equation $y^2 = x(x + 2^a p^b)(x - 2^a p^b)$*, 1585

Draziotis, Konstantinos A. *Integer points on the curve $Y^2 = X^3 \pm p^k X$*, 1493
Dutkay, Dorin Ervin, and Palle E. T. Jorgensen. *Iterated function systems, Ruelle operators, and invariant projective measures*, 1931
Edelman, Alan. *See* Koev, Plamen
Eisner, Tatjana, and Hans Zwart. *Continuous-time Kreiss resolvent condition on infinite-dimensional spaces*, 1971
Elling, Volker. *A possible counterexample to well posedness of entropy solutions and to Godunov scheme convergence*, 1721
Elsenhans, Andreas-Stephan, and Jörg Jahnel. *The Diophantine equation $x^4 + 2y^4 = z^4 + 4w^4$*, 935
Espedal, Magne S. *See* Garrido, Izaskun
Fang, Gensun, and Xuehua Li. *Comparison theorems of Kolmogorov type and exact values of n-widths on Hardy–Sobolev classes*, 241
Fang, Kai-Tai, Dietmar Maringer, Yu Tang, and Peter Winker. *Lower bounds and stochastic optimization algorithms for uniform designs with three or four levels*, 859
Farr, Jeffrey B., and Shuhong Gao. *Gröbner bases and generalized Padé approximation*, 461
Faugeras, Blaise, Jérôme Pousin, and Franck Fontvieille. *An efficient numerical scheme for precise time integration of a diffusion-dissolution/precipitation chemical system*, 209
Fieker, Claus, and Michael E. Pohst. *Dependency of units in number fields*, 1507
Fladmark, Gunnar E. *See* Garrido, Izaskun
Flammang, Valérie, Georges Rhin, and Jean-Marc Sac-Épée. *Integer transfinite diameter and polynomials with small Mahler measure*, 1527
Fontvieille, Franck. *See* Faugeras, Blaise
Gallardo, José M. *See* Castro, Manuel
Gantumur, Tsogtgerel, and Rob Stevenson. *Computation of differential operators in wavelet coordinates*, 697
Gao, Shuhong. *See* Farr, Jeffrey B.
Garcke, Harald. *See* Barrett, John W.
Garrido, Izaskun, Barry Lee, Gunnar E. Fladmark, and Magne S. Espedal. *Convergent iterative schemes for time parallelization*, 1403
Gatica, Gabriel N., and Francisco-Javier Sayas. *An a priori error analysis for the coupling of local discontinuous Galerkin and boundary element methods*, 1675
Gebauer, Susanna, Ralf Kornhuber, and Harry Yserentant. *Hierarchical decomposition of domains with fractures*, 73
Girard, Martine. *The group of Weierstrass points of a plane quartic with at least eight hyperflexes*, 1561
Golan, Shahar. *See* Berend, Daniel
González-Vera, P. *See* Díaz-Mendoza, C.
———. *See* Van Deun, Joris
Goodrich, John, Thomas Hagstrom, and Jens Lorenz. *Hermite methods for hyperbolic initial-boundary value problems*, 595
Gopalakrishnan, Jayadeep, and Joseph E. Pasciak. *The convergence of V-cycle multigrid algorithms for axisymmetric Laplace and Maxwell equations*, 1697
Granville, Andrew, and Peter Pleasants. *Aurifeuillian factorization*, 497
Griebel, Michael, and Henryk Woźniakowski. *On the optimal convergence rate of universal and nonuniversal algorithms for multivariate integration and approximation*, 1259
Grundman, H. G., and L. E. Lippincott. *Computing the arithmetic genus of Hilbert modular fourfolds*, 1553
Gurak, S. *On the minimal polynomial of Gauss periods for prime powers*, 2021
Guzmán, Johnny. *Pointwise error estimates for discontinuous Galerkin methods with lifting operators for elliptic problems*, 1067
Hagstrom, Thomas. *See* Goodrich, John
Han, Bin, and Rong-Qing Jia. *Optimal C^2 two-dimensional interpolatory ternary subdivision schemes with two-ring stencils*, 1287
Hansen, Eskil. *Runge-Kutta time discretizations of nonlinear dissipative evolution equations*, 631
Harbrecht, Helmut, and Rob Stevenson. *Wavelets with patchwise cancellation properties*, 1871
Hare, K. G., and C. J. Smyth. *The monic integer transfinite diameter*, 1997
Hasson, Maurice. *Wavelet-based filters for accurate computation of derivatives*, 259

Holden, Joshua, and Pieter Moree. *Some heuristics and results for small cycles of the discrete logarithm*, 419
Hong, Jialin, Hongyu Liu, and Geng Sun. *The multi-symplecticity of partitioned Runge-Kutta methods for Hamiltonian PDEs*, 167
Hoppe, R. H. W. *See* Carstensen, Carsten
Hundsdorfer, Willem, and Steven J. Ruuth. *On monotonicity and boundedness properties of linear multistep methods*, 655

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from `www.ams.org/journals/`. Subscription prices for Volume 75 (2006) are as follows: for paper delivery, $467 list, $374 institutional member, $420 corporate member, $304 member of CBMS organizations; $280 individual member; for electronic delivery, $420 list, $336 institutional member, $378 corporate member, $273 member of CBMS organizations, $252 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add $15 for surface delivery outside the United States and India; $18 to India. Expedited delivery to destinations in North America is $17; elsewhere $56.

Back number information. For back issues see the `www.ams.org/bookstore`.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to `reprint-permission@ams.org`.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 75, No. 253 January 2006

Kent-Andre Mardal and Ragnar Winther, An observation on Korn's inequality for nonconforming finite element methods 1
John W. Barrett, Harald Garcke, and Robert Nürnberg, Finite element approximation of a phase field model for surface diffusion of voids in a stressed solid 7
Zhiming Chen and Guanghua Ji, Sharp L^1 a posteriori error analysis for nonlinear convection-diffusion problems 43
Susanna Gebauer, Ralf Kornhuber, and Harry Yserentant, Hierarchical decomposition of domains with fractures 73
Raimund Bürger, Aníbal Coronel, and Mauricio Sepúlveda, A semi-implicit monotone difference scheme for an initial-boundary value problem of a strongly degenerate parabolic equation modeling sedimentation-consolidation processes 91
Mario Ohlberger and Julien Vovelle, Error estimate for the approximation of nonlinear conservation laws on bounded domains by the finite volume method 113
Leping Sun, Stability analysis for delay differential equations with multidelays and numerical examples 151
Jialin Hong, Hongyu Liu, and Geng Sun, The multi-symplecticity of partitioned Runge-Kutta methods for Hamiltonian PDEs 167
Steven J. Ruuth, Global optimization of explicit strong-stability-preserving Runge-Kutta methods 183
Blaise Faugeras, Jérôme Pousin, and Franck Fontvieille, An efficient numerical scheme for precise time integration of a diffusion-dissolution/precipitation chemical system 209
James Demmel and Plamen Koev, Accurate and efficient evaluation of Schur and Jack functions 223
Gensun Fang and Xuehua Li, Comparison theorems of Kolmogorov type and exact values of n-widths on Hardy–Sobolev classes 241
Maurice Hasson, Wavelet-based filters for accurate computation of derivatives 259
C. Díaz-Mendoza, P. González-Vera, M. Jiménez Paiz, and F. Cala Rodríguez, Orthogonal Laurent polynomials corresponding to certain strong Stieltjes distributions with applications to numerical quadratures 281
Joris Van Deun, Adhemar Bultheel, and Pablo González Vera, On computing rational Gauss-Chebyshev quadrature formulas 307
Avram Sidi, Extension of a class of periodizing variable transformations for numerical integration 327
V. Y. Pan, M. Kunin, R. E. Rosholt, and H. Kodal, Homotopic residual correction processes 345
James A. Muir and Douglas R. Stinson, Minimality and other properties of the width-w nonadjacent form 369
Julián Aguirre, Mikel Bilbao, and Juan Carlos Peral, The trace of totally positive algebraic integers 385

Alfred G. Noël, Some remarks on Richardson orbits in complex symmetric spaces 395
Joshua Holden and Pieter Moree, Some heuristics and results for small cycles of the discrete logarithm 419
Zhenxiang Zhang, Notes on some new kinds of pseudoprimes 451
Jeffrey B. Farr and Shuhong Gao, Gröbner bases and generalized Padé approximation 461
Peter Borwein, Stephen Choi, and Frank Chu, An old conjecture of Erdős–Turán on additive bases 475
Jean Cougnard, Normal integral bases for A_4 extensions of the rationals . 485
Andrew Granville and Peter Pleasants, Aurifeuillian factorization 497
Reviews and Descriptions of Tables and Books 509
Benedict Leimkuhler and Sebastian Reich **1**

Vol. 75, No. 254 **April 2006**

Georgios Akrivis, Charalambos Makridakis, and Ricardo H. Nochetto, A posteriori error estimates for the Crank–Nicolson method for parabolic equations 511

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from `http://www.ams.org/mcom`.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at `www.ams.org/cgi-bin/peertrack/submission.pl`, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from `www.ams.org/msc/`. The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from `www.ams.org/publications/`. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at `www.ams.org/mrlookup/`.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of TeX, using $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX is the highly preferred format of TeX, but author packages are also available in $\mathcal{A}\mathcal{M}\mathcal{S}$-TeX. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in LaTeX or plain TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. LaTeX users will find that $\mathcal{AMS}$-LaTeX is the same as LaTeX with additional commands to simplify the typesetting of mathematics, and users of plain TeX should have the foundation for learning $\mathcal{AMS}$-LaTeX.

Authors may retrieve an author package from the AMS website starting from `www.ams.org/tex/` or via FTP to `ftp.ams.org` (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format following the author packages link from `www.ams.org/tex/`. The author package can also be obtained free of charge by sending email to `tech-support@ams.org` (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify $\mathcal{AMS}$-LaTeX or $\mathcal{AMS}$-TeX and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at `www.ams.org/submit-book-journal/`, sent via email to `pub-submit@ams.org` (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from `www.ams.org/jourhtml/authors.html`. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a "hairline" for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an "Added after posting" section may be added to the paper right before the References when there is a critical error in the content of the paper. The "Added after posting" section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The "Added after posting" section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata

article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web and via email. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from `www.ams.org/mstrack/` or via email sent to `mstrack-query@ams.org`. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word *all* on the subject line. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to `mcom-query@ams.org`.

TEX files available upon request. TEX files are available upon request for authors by sending email to `file-request@ams.org` or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The TEX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because TEX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, TEX files cannot be guaranteed to run through the author's version of TEX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's TEX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to `mcom-query@ams.org` or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
