## Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

**Submission information.** See **Information for Authors** at the end of this issue.

**Publisher Item Identifier.** The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

**Postings to the AMS website.** Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

**Subscription information.** *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from [www.ams.org/journals/](http://www.ams.org/journals/). Subscription prices for Volume 78 (2009) are as follows: for paper delivery, \$530 list, \$424 institutional member, \$477 corporate member, \$345 member of CBMS organizations; \$318 individual member; for electronic delivery, \$477 list, \$382 institutional member, \$429 corporate member, \$310 member of CBMS organizations, \$286 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$28 for surface delivery outside the United States and India; \$41 to India. Expedited delivery to destinations in North America is \$30; elsewhere \$77. For paper delivery a late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year.

**Back number information.** For back issues see the [www.ams.org/bookstore](http://www.ams.org/bookstore).

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

**Copying and reprinting.** Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to [reprint-permission@ams.org](mailto:reprint-permission@ams.org).

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

---

*Mathematics of Computation* (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

## INDEX TO VOLUME 78 (2009)

- Abdukhalikov, Kanat, and Rudolf Scharlau. *Unimodular lattices in dimensions 14 and 15 over the Eisenstein integers*, 387
- Acevedo, Ramiro, Salim Meddahi, and Rodolfo Rodríguez. *An  $E$ -based mixed formulation for a time-dependent eddy current problem*, 1929
- Ariel, Gil, Bjorn Engquist, and Richard Tsai. *A multiscale method for highly oscillatory ordinary differential equations with resonance*, 929
- Asadzadeh, M., A. H. Schatz, and W. Wendland. *A new approach to Richardson extrapolation in the finite element method for second order elliptic problems*, 1951
- Axelsson, Owe, Evgeny Glushkov, and Natalya Glushkova. *The local Green's function method in singularly perturbed convection-diffusion problems*, 153
- Bach, Eric, Dominic Klyve, and Jonathan P. Sorenson. *Computing prime harmonic sums*, 2283
- Bartels, Sören, Christian Lubich, and Andreas Prohl. *Convergent discretization of heat and wave map flows to spheres using approximate discrete Lagrange multipliers*, 1269
- Bennequin, D., M. J. Gander, and L. Halpern. *A homographic best approximation problem with application to optimized Schwarz waveform relaxation*, 185
- Brent, Richard P., and Paul Zimmermann. *Ten new primitive binary trinomials*, 1197
- Broughan, Kevin A. *Evaluating Jacquet's  $GL(n)$  Whittaker function*, 1061
- Bruin, Nils, and Michael Stoll. *Two-cover descent on hyperelliptic curves*, 2347
- Bullejos, M., and J. C. Rosales. *Proportionally modular diophantine inequalities and the Stern-Brocot tree*, 1211
- Bultheel, Adhemar, Ruymán Cruz-Barroso, Karl Deckers, and Pablo González-Vera. *Rational Szegő quadratures associated with Chebyshev weight functions*, 1031
- Busé, Laurent, and Bernard Mourrain. *Explicit factors of some iterated resultants and discriminants*, 345
- Cai, Jian-Feng, Stanley Osher, and Zuowei Shen. *Linearized Bregman iterations for compressed sensing*, 1515
- . *Convergence of the linearized Bregman iteration for  $\ell_1$ -norm minimization*, 2127
- Cai, Zhiqiang, and Yanqiu Wang. *An error estimate for two-dimensional Stokes driven cavity flow*, 771
- de la Calle Ysern, B., G. López Lagomasino, and L. Reichel. *Stieltjes-type polynomials on the unit circle*, 969
- Calvo, I. Jiménez, J. Herranz, and G. Sáez. *A new algorithm to search for small nonzero  $|x^3 - y^2|$  values*, 2435
- Čermák, J., and J. Janský. *On the asymptotics of the trapezoidal rule for the pantograph equation*, 2107
- Chapdelaine, Hugo. *Computation of  $p$ -units in ray class fields of real quadratic number fields*, 2307
- Chen, Long, Michael Holst, and Jinchao Xu. *Convergence and optimality of adaptive mixed finite element methods*, 35
- Chen, William Y. C., and Ernest X. W. Xia. *The ratio monotonicity of the Boros-Moll polynomials*, 2269
- Chu, Moody T., and Shu-Fang Xu. *Spectral decomposition of real symmetric quadratic  $\lambda$ -matrices and its applications*, 293
- Cockburn, Bernardo, Johnny Guzmán, and Haiying Wang. *Superconvergent discontinuous Galerkin methods for second-order elliptic problems*, 1
- Coffey, Mark W. *Asymptotic estimation of  $\xi^{(2n)}(1/2)$ : On a conjecture of Farmer and Rhoades*, 1147
- Cohen, Graeme L. *Superharmonic numbers*, 421
- Coutinho, S. C., and Marcos da Silva Ferreira. *Algebraic solutions of Jacobi equations*, 2427
- Cruz-Barroso, Ruymán. *See Bultheel, Adhemar*
- Cullinan, John. *A computational approach to the 2-torsion structure of abelian threefolds*, 1825
- Cuyt, Annie. *See Zhou, Ping*
- Debussche, Arnaud, and Jacques Printems. *Weak order for the discretization of the stochastic heat equation*, 845
- Deckelnick, Klaus, and Gerhard Dziuk. *Error analysis for the elastic flow of parametrized curves*, 645
- Deckers, Karl. *See Bultheel, Adhemar*
- Dick, Josef. *See Liu, Kwong-IP*

- Didenko, Victor D., and Bernd Silbermann. *Computational approach to solvability of refinement equations*, 1435
- Dolean, Victorita, Frédéric Nataf, and Gerd Rapin. *Deriving a new domain decomposition method for the Stokes equations using the Smith factorization*, 789
- Driver, Eric D., and John W. Jones. *A targeted Martinet search*, 1109
- Du, Jinyuan. *On the collocation methods for singular integral equations with Hilbert kernel*, 891
- Dubickas, Artūras, and Jonas Jankauskas. *On Newman polynomials which divide no Littlewood polynomial*, 327
- Dubickas, Artūras, and Michael J. Mossinghoff. *Lower bounds for Z-numbers*, 1837
- Dupont, Todd F., and Itir Mogultay. *A symmetric error estimate for Galerkin approximations of time-dependent Navier-Stokes equations in two dimensions*, 1919
- Dziuk, Gerhard. *See* Deckelnick, Klaus
- Eisermann, Michael. *Bimonotone enumeration*, 591
- Elsenhans, Andreas-Stephan, and Jörg Jahnel. *New sums of three cubes*, 1227
- Enge, Andreas. *The complexity of class polynomial computation via floating point approximations*, 1089
- . *Computing modular polynomials in quasi-linear time*, 1809
- Engquist, Bjorn. *See* Ariel, Gil
- Erricolo, D. *See* Larsen, T. M.
- Ezquerro, J. A., and M. A. Hernández. *An improvement of the region of accessibility of Chebyshev's method from Newton's method*, 1613
- Faou, Erwan. *Analysis of splitting methods for reaction-diffusion problems using stochastic calculus*, 1467
- Faou, Erwan, and Tony Lelièvre. *Conservative stochastic differential equations: Mathematical and numerical analysis*, 2047
- Farrell, P. A., E. O'Riordan, and G. I. Shishkin. *A class of singularly perturbed quasilinear differential equations with interior layers*, 103
- Flammang, V. *Trace of totally positive algebraic integers and integer transfinite diameter*, 1119
- Fukuda, Takashi, and Keiichi Komatsu. *On the Iwasawa  $\lambda$ -invariant of the cyclotomic  $\mathbb{Z}_2$ -extension of  $\mathbb{Q}(\sqrt{p})$* , 1797
- Fuselier, Edward J., Francis J. Narcowich, Joseph D. Ward, and Grady B. Wright. *Error and stability estimates for surface-divergence free RBF interpolants on the sphere*, 2157
- Gallouët, T., R. Herbin, and J.-C. Latché. *A convergent finite element-finite volume scheme for the compressible Stokes problem. Part I: The isothermal case*, 1333
- Gander, M. J. *See* Bennequin, D.
- Gao, Shuhong, Daqing Wan, and Mingsheng Wang. *Primary decomposition of zero-dimensional ideals over finite fields*, 509
- Gibson, Donald Jason. *A covering system with least modulus 25*, 1127
- Glushkov, Evgeny. *See* Axelsson, Owe
- Glushkova, Natalya. *See* Axelsson, Owe
- Goh, Say Song, Tim N. T. Goodman, and S. L. Lee. *Hybrid spline frames*, 1537
- González, Josep, and Jordi Guàrdia. *Genus two curves with quaternionic multiplication and modular Jacobian*, 575
- González-Vera, Pablo. *See* Bultheel, Adhemar
- Goodman, Tim N. T. *See* Goh, Say Song
- Griebel, M., and S. Knapek. *Optimized general sparse grid approximation spaces for operator equations*, 2223
- Grigorov, Grigor, Andrei Jorza, Stefan Patrikis, William A. Stein, and Corina Tarniță. *Computational verification of the Birch and Swinnerton-Dyer conjecture for individual elliptic curves*, 2397
- Grubišić, Luka, and Jeffrey S. Owall. *On estimators for eigenvalue/eigenvector approximations*, 739
- Guàrdia, Jordi. *See* González, Josep
- Guo, Ben-yu, and Tian-jun Wang. *Composite generalized Laguerre-Legendre spectral method with domain decomposition and its application to Fokker-Planck equation in an infinite channel*, 129
- Guzmán, Johnny. *See* Cockburn, Bernardo

- Gyöngy, István, and Nicolai Krylov. *First derivatives estimates for finite-difference schemes*, 2019
- Hagedorn, Thomas R. *Computation of Jacobsthal's function  $h(n)$  for  $n < 50.$* , 1073
- Hajdu, L., and T. Kovács. *Parallel LLL-reduction for bounding the integral solutions of elliptic Diophantine equations*, 1201
- Hakkarainen, Tuomas. *On the computation of class numbers of real abelian fields*, 555
- Halpern, L. *See* Bennequin, D.
- Halpern, Laurence, and Jérémie Szeftel. *Nonlinear nonoverlapping Schwarz waveform relaxation for semilinear wave propagation*, 865
- Hansen, Eskil, and Alexander Ostermann. *Exponential splitting for unbounded operators*, 1485
- Harada, Masaaki, Akihiro Munemasa, and Boris Venkov. *Classification of ternary extremal self-dual codes of length 28*, 1787
- Hare, Kevin G. *Tiles in quasicrystals with quartic irrationality*, 405
- Heim, Bernhard. *Congruences for the Ramanujan function and generalized class numbers*, 431
- Herbin, R. *See* Gallouët, T.
- Hernández, M. A. *See* Ezquerro, J. A.
- Herranz, J. *See* Calvo, I. Jiménez
- Hickernell, Fred J. *See* Liu, Kwong-IP
- Holst, Michael. *See* Chen, Long
- Hu, Jun, and Zhong-Ci Shi. *Analysis for quadrilateral MITC elements for the Reissner-Mindlin plate problem*, 673
- Jahnel, Jörg. *See* Elsenhans, Andreas-Stephan
- Jankauskas, Jonas. *See* Dubickas, Artūras
- Jánský, J. *See* Čermák, J.
- Jones, John W. *See* Driver, Eric D.
- Jorza, Andrei. *See* Grigorov, Grigor
- Juntunen, Mika, and Rolf Stenberg. *Nitsche's method for general boundary conditions*, 1353
- Karlsen, Kenneth Hvistendahl, Siddhartha Mishra, and Nils Henrik Risebro. *Well-balanced schemes for conservation laws with source terms based on a local discontinuous flux formulation*, 55
- Karpenkov, O. N. *Constructing multidimensional periodic continued fractions in the sense of Klein*, 1687
- Ketcheson, David I. *Computation of optimal monotonicity preserving general linear methods*, 1497
- Kim, Hyun Kwang. *Errata to "Evaluation of zeta function of the simplest cubic field at negative odd integers"*, 617
- Kim, Seungil, and Joseph E. Pasciak. *The computation of resonances in open systems using a perfectly matched layer*, 1375
- Kitaev, Alexander V. *See* Vidūnas, Raimundas
- Kitaoka, Yoshiyuki. *A statistical relation of roots of a polynomial in different local fields*, 523
- Klyve, Dominic. *See* Bach, Eric
- Knapek, S. *See* Griebel, M.
- Komatsu, Keiichi. *See* Fukuda, Takashi
- Kós, Géza, Péter Ligeti, and Péter Sziklai. *Reconstruction of matrices from submatrices*, 1733
- Kouznetsov, Dmitrii. *Solution of  $F(z+1) = \exp(F(z))$  in complex  $z$ -plane*, 1647
- Kovács, T. *See* Hajdu, L.
- Krylov, Nicolai. *See* Gyöngy, István
- Lagomasino, G. López. *See* de la Calle Ysern, B.
- Languasco, A., and A. Zaccagnini. *On the constant in the Mertens product for arithmetic progressions. II: Numerical values*, 315
- Larsen, T. M., D. Erricolo, and P. L. E. Uslenghi. *New method to obtain small parameter power series expansions of Mathieu radial and angular functions*, 255
- Latché, J.-C. *See* Gallouët, T.
- Le Gia, Q. T., I. H. Sloan, and T. Tran. *Overlapping additive Schwarz preconditioners for elliptic PDEs on the unit sphere*, 79
- Lee, S. L. *See* Goh, Say Song
- Lelièvre, Tony. *See* Faou, Erwan
- Leykin, Anton, and Frank Sottile. *Galois groups of Schubert problems via homotopy computation*, 1749

- Li, Hengguang. *A-priori analysis and the finite element method for a class of degenerate elliptic equations*, 713
- Li, Huiyuan, and Yuan Xu. *Discrete Fourier analysis on a dodecahedron and a tetrahedron*, 999
- Li, Jiequan, Huazhong Tang, Gerald Warnecke, and Lumei Zhang. *Local oscillations in finite difference solutions of hyperbolic conservation laws*, 1997
- Ligeti, Péter. *See* Kós, Géza
- Lin, Gui-Hua. *Combined Monte Carlo sampling and penalty method for stochastic nonlinear complementarity problems*, 1671
- Liu, Kwong-Ip, Josef Dick, and Fred J. Hickernell. *A multivariate fast discrete Walsh transform with an application to function interpolation*, 1573
- Logan, Adam, and Ronald van Luijk. *Nontrivial elements of Sha explained through K3 surfaces*, 441
- Lubich, Christian. *See* Bartels, Sören
- van Luijk, Ronald. *See* Logan, Adam
- van de Lune, J. *See* de Reyna, J. Arias
- Luo, Qiu-Ming. *Fourier expansions and integral representations for the Apostol-Bernoulli and Apostol-Euler polynomials*, 2193
- Madureira, Alexandre L. *A multiscale finite element method for partial differential equations posed in domains with rough boundaries*, 25
- Maes, Jan, and Peter Oswald. *Multilevel finite element preconditioning for  $\sqrt{3}$  refinement*, 1869
- Mahale, Pallavi, and M. Thamban Nair. *A simplified generalized Gauss-Newton method for nonlinear ill-posed problems*, 171
- Maset, S., and M. Zennaro. *Unconditional stability of explicit exponential Runge-Kutta methods for semi-linear ordinary differential equations*, 957
- Matthews, Keith R., John P. Robertson, and Jim White. *Corrigenda to “Calculation of the regulator of  $\mathbf{Q}(\sqrt{D})$  by use of the nearest integer continued fraction algorithm”*, 615
- McLean, William. *See* Mustapha, Kassem

## Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

**Submission information.** See **Information for Authors** at the end of this issue.

**Publisher Item Identifier.** The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

**Postings to the AMS website.** Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

**Subscription information.** *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from [www.ams.org/journals/](http://www.ams.org/journals/). Subscription prices for Volume 78 (2009) are as follows: for paper delivery, \$530 list, \$424 institutional member, \$477 corporate member, \$345 member of CBMS organizations; \$318 individual member; for electronic delivery, \$477 list, \$382 institutional member, \$429 corporate member, \$310 member of CBMS organizations, \$286 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$28 for surface delivery outside the United States and India; \$41 to India. Expedited delivery to destinations in North America is \$30; elsewhere \$77. For paper delivery a late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year.

**Back number information.** For back issues see the [www.ams.org/bookstore](http://www.ams.org/bookstore).

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

**Copying and reprinting.** Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to [reprint-permission@ams.org](mailto:reprint-permission@ams.org).

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

---

*Mathematics of Computation* (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 78, No. 265

January 2009

<b>Bernardo Cockburn, Johnny Guzmán, and Haiying Wang,</b> Superconvergent discontinuous Galerkin methods for second-order elliptic problems .....	1
<b>Alexandre L. Madureira,</b> A multiscale finite element method for partial differential equations posed in domains with rough boundaries .....	25
<b>Long Chen, Michael Holst, and Jinchao Xu,</b> Convergence and optimality of adaptive mixed finite element methods .....	35
<b>Kenneth Hvistendahl Karlsen, Siddhartha Mishra, and Nils Henrik Risebro,</b> Well-balanced schemes for conservation laws with source terms based on a local discontinuous flux formulation .....	55
<b>Q. T. Le Gia, I. H. Sloan, and T. Tran,</b> Overlapping additive Schwarz preconditioners for elliptic PDEs on the unit sphere .....	79
<b>P. A. Farrell, E. O’Riordan, and G. I. Shishkin,</b> A class of singularly perturbed quasilinear differential equations with interior layers .....	103
<b>Ben-yu Guo and Tian-jun Wang,</b> Composite generalized Laguerre- Legendre spectral method with domain decomposition and its application to Fokker-Planck equation in an infinite channel .....	129
<b>Owe Axelsson, Evgeny Glushkov, and Natalya Glushkova,</b> The local Green’s function method in singularly perturbed convection-diffusion problems .....	153
<b>Pallavi Mahale and M. Thamban Nair,</b> A simplified generalized Gauss- Newton method for nonlinear ill-posed problems .....	171
<b>D. Bennequin, M. J. Gander, and L. Halpern,</b> A homographic best approximation problem with application to optimized Schwarz waveform relaxation .....	185
<b>Wenchang Sun,</b> Local sampling theorems for spaces generated by splines with arbitrary knots .....	225
<b>Avram Sidi,</b> Asymptotic expansions of Gauss-Legendre quadrature rules for integrals with endpoint singularities .....	241
<b>T. M. Larsen, D. Erricolo, and P. L. E. Uslenghi,</b> New method to obtain small parameter power series expansions of Mathieu radial and angular functions .....	255
<b>Robert Osburn and Carsten Schneider,</b> Gaussian Hypergeometric series and supercongruences .....	275
<b>Moody T. Chu and Shu-Fang Xu,</b> Spectral decomposition of real symmetric quadratic $\lambda$ -matrices and its applications .....	293
<b>A. Languasco and A. Zaccagnini,</b> On the constant in the Mertens product for arithmetic progressions. II: Numerical values .....	315
<b>Artūras Dubickas and Jonas Jankauskas,</b> On Newman polynomials which divide no Littlewood polynomial .....	327
<b>Laurent Busé and Bernard Mourrain,</b> Explicit factors of some iterated resultants and discriminants .....	345
<b>Kanat Abdukhalikov and Rudolf Scharlau,</b> Unimodular lattices in dimensions 14 and 15 over the Eisenstein integers .....	387

<b>Kevin G. Hare</b> , Tiles in quasicrystals with quartic irrationality .....	405
<b>Graeme L. Cohen</b> , Superharmonic numbers .....	421
<b>Bernhard Heim</b> , Congruences for the Ramanujan function and generalized class numbers .....	431
<b>Adam Logan and Ronald van Luijk</b> , Nontrivial elements of Sha explained through K3 surfaces .....	441
<b>Andrew V. Sutherland</b> , A generic approach to searching for Jacobians ..	485
<b>Shuhong Gao, Daqing Wan, and Mingsheng Wang</b> , Primary decomposition of zero-dimensional ideals over finite fields .....	509
<b>Yoshiyuki Kitaoka</b> , A statistical relation of roots of a polynomial in different local fields .....	523
<b>Jordi Quer</b> , Fields of definition of building blocks .....	537
<b>Tuomas Hakkarainen</b> , On the computation of class numbers of real abelian fields .....	555
<b>Josep González and Jordi Guàrdia</b> , Genus two curves with quaternionic multiplication and modular Jacobian .....	575
<b>Michael Eisermann</b> , Bimonotone enumeration .....	591
<b>Keith R. Matthews, John P. Robertson, and Jim White</b> , Corrigenda to “Calculation of the regulator of $\mathbf{Q}(\sqrt{D})$ by use of the nearest integer continued fraction algorithm” .....	615
<b>Hyun Kwang Kim</b> , Errata to “Evaluation of zeta function of the simplest cubic field at negative odd integers” .....	617

Vol. 78, No. 266

April 2009

<b>Rob Stevenson and Manuel Werner</b> , A multiplicative Schwarz adaptive wavelet method for elliptic boundary value problems .....	619
<b>Klaus Deckelnick and Gerhard Dziuk</b> , Error analysis for the elastic flow of parametrized curves .....	645
<b>Jun Hu and Zhong-Ci Shi</b> , Analysis for quadrilateral MITC elements for the Reissner-Mindlin plate problem .....	673
<b>Hengguang Li</b> , A-priori analysis and the finite element method for a class of degenerate elliptic equations .....	713
<b>Luka Grubišić and Jeffrey S. Owall</b> , On estimators for eigenvalue/eigenvector approximations .....	739
<b>Zhiqiang Cai and Yanqiu Wang</b> , An error estimate for two-dimensional Stokes driven cavity flow .....	771
<b>Victorita Dolean, Frédéric Nataf, and Gerd Rapin</b> , Deriving a new domain decomposition method for the Stokes equations using the Smith factorization .....	789
<b>Jie Shen and Li-Lian Wang</b> , On spectral approximations in elliptical geometries using Mathieu functions .....	815

<b>Arnaud Debussche and Jacques Printems</b> , Weak order for the discretization of the stochastic heat equation .....	845
<b>Laurence Halpern and Jérémie Szeftel</b> , Nonlinear nonoverlapping Schwarz waveform relaxation for semilinear wave propagation .....	865
<b>Jinyuan Du</b> , On the collocation methods for singular integral equations with Hilbert kernel .....	891
<b>Gil Ariel, Bjorn Engquist, and Richard Tsai</b> , A multiscale method for highly oscillatory ordinary differential equations with resonance .....	929
<b>S. Maset and M. Zennaro</b> , Unconditional stability of explicit exponential Runge-Kutta methods for semi-linear ordinary differential equations ..	957
<b>B. de la Calle Ysern, G. López Lagomasino, and L. Reichel</b> , Stieltjes-type polynomials on the unit circle .....	969
<b>Huiyuan Li and Yuan Xu</b> , Discrete Fourier analysis on a dodecahedron and a tetrahedron .....	999
<b>Adhemar Bultheel, Ruymán Cruz-Barroso, Karl Deckers, and Pablo González-Vera</b> , Rational Szegő quadratures associated with Chebyshev weight functions .....	1031
<b>Kevin A. Broughan</b> , Evaluating Jacquet's $GL(\mathbf{n})$ Whittaker function ....	1061
<b>Thomas R. Hagedorn</b> , Computation of Jacobsthal's function $h(n)$ for $n < 50$ . .....	1073
<b>Andreas Enge</b> , The complexity of class polynomial computation via floating point approximations .....	1089
<b>Eric D. Driver and John W. Jones</b> , A targeted Martinet search .....	1109
<b>V. Flammang</b> , Trace of totally positive algebraic integers and integer transfinite diameter .....	1119
<b>Donald Jason Gibson</b> , A covering system with least modulus 25 .....	1127
<b>Mark W. Coffey</b> , Asymptotic estimation of $\xi^{(2n)}(1/2)$ : On a conjecture of Farmer and Rhoades .....	1147
<b>John Voight</b> , Shimura curves of genus at most two .....	1155
<b>Roger Oyono</b> , Non-hyperelliptic modular Jacobians of dimension 3 .....	1173
<b>A. Paszkiewicz</b> , A new prime $p$ for which the least primitive root (mod $p$ ) and the least primitive root (mod $p^2$ ) are not equal .....	1193
<b>Richard P. Brent and Paul Zimmermann</b> , Ten new primitive binary trinomials .....	1197
<b>L. Hajdu and T. Kovács</b> , Parallel LLL-reduction for bounding the integral solutions of elliptic Diophantine equations .....	1201
<b>M. Bullejos and J. C. Rosales</b> , Proportionally modular diophantine inequalities and the Stern-Brocot tree .....	1211
<b>Andreas-Stephan Elsenhans and Jörg Jahnel</b> , New sums of three cubes	1227
<b>Reviews and Descriptions of Tables and Books</b> .....	1231
Raymond Hon-Fu Chan and Xiao-Qing Jin, Editors <b>1</b> , P.-A. Absil, R. Mahony and R. Sepulchre <b>2</b>	

Alexander Weiss and Barbara I. Wohlmuth, A posteriori error estimator and error control for contact problems .....	1237
Sören Bartels, Christian Lubich, and Andreas Prohl, Convergent discretization of heat and wave map flows to spheres using approximate discrete Lagrange multipliers .....	1269
Christoph Schwab and Rob Stevenson, Space-time adaptive wavelet methods for parabolic evolution problems .....	1293
Ian H. Sloan and Holger Wendland, Inf-sup condition for spherical polynomials and radial basis functions on spheres .....	1319
T. Gallouët, R. Herbin, and J.-C. Latché, A convergent finite element-finite volume scheme for the compressible Stokes problem. Part I: The isothermal case .....	1333
Mika Juntunen and Rolf Stenberg, Nitsche's method for general boundary conditions .....	1353

<b>Reviews and Descriptions of Tables and Books</b> .....	2445

## Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

## Information for Authors

**Initial submission.** The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at [www.ams.org/peer-review-submission](http://www.ams.org/peer-review-submission), or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from [www.ams.org/msc/](http://www.ams.org/msc/). The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from [www.ams.org/msnhtml/serials.pdf](http://www.ams.org/msnhtml/serials.pdf). To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at [www.ams.org/mrlookup/](http://www.ams.org/mrlookup/).

**Electronically prepared manuscripts.** For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ . To this end, the Society has prepared  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of  $\mathcal{T}\mathcal{E}\mathcal{X}$ , using  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time.  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  is the highly preferred format of  $\mathcal{T}\mathcal{E}\mathcal{X}$ , but author packages are also available in  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ . Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  or plain  $\mathcal{T}\mathcal{E}\mathcal{X}$  are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. L<sup>A</sup>T<sub>E</sub>X users will find that  $\mathcal{A}\mathcal{M}\mathcal{S}$ -L<sup>A</sup>T<sub>E</sub>X is the same as L<sup>A</sup>T<sub>E</sub>X with additional commands to simplify the typesetting of mathematics, and users of plain T<sub>E</sub>X should have the foundation for learning  $\mathcal{A}\mathcal{M}\mathcal{S}$ -L<sup>A</sup>T<sub>E</sub>X.

Authors may retrieve an author package for *Mathematics of Computation* from [www.ams.org/mcom/mcomauthorpac.html](http://www.ams.org/mcom/mcomauthorpac.html) or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to [tech-support@ams.org](mailto:tech-support@ams.org) (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify  $\mathcal{A}\mathcal{M}\mathcal{S}$ -L<sup>A</sup>T<sub>E</sub>X or  $\mathcal{A}\mathcal{M}\mathcal{S}$ -T<sub>E</sub>X and the publication in which your paper will appear. Please be sure to include your complete email address.

**After acceptance.** The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to [pub-submit@ams.org](mailto:pub-submit@ams.org) (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/authors/journals.html](http://www.ams.org/authors/journals.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

**AMS policy on making changes to articles after posting.** Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata

article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to [mcom-query@ams.org](mailto:mcom-query@ams.org).

**T<sub>E</sub>X files available upon request.** T<sub>E</sub>X files are available upon request for authors by sending email to [file-request@ams.org](mailto:file-request@ams.org) or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T<sub>E</sub>X file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T<sub>E</sub>X production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T<sub>E</sub>X files cannot be guaranteed to run through the author's version of T<sub>E</sub>X without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T<sub>E</sub>X environment.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to [mcom-query@ams.org](mailto:mcom-query@ams.org) or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
