Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 79 (2010) are as follows: for paper delivery, US\$530 list, US\$424 institutional member, US\$477 corporate member, US\$345 member of CBMS organizations; US\$318 individual member; for electronic delivery, US\$477 list, US\$382 institutional member, US\$429 corporate member, US\$310 member of CBMS organizations, US\$286 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$30 for surface delivery outside the United States and India; US\$41 to India. Expedited delivery to destinations in North America is US\$30; elsewhere US\$77. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 79, No. 272

October 2010

J. M. Melenk and S. Sauter , Convergence analysis for finite element discretizations of the Helmholtz equation with Dirichlet-to-Neumann boundary conditions	1871
C.-C. Chu, I. G. Graham, and T.-Y. Hou , A new multiscale finite element method for high-contrast elliptic interface problems	1915
Ľubomír Bañas and Andreas Prohl , Convergent finite element discretization of the multi-fluid nonstationary incompressible magnetohydrodynamics equations	1957
Martin Vohralík , Unified primal formulation-based a priori and a posteriori error analysis of mixed finite element methods	2001
Dylan M. Copeland, Jayadeep Gopalakrishnan, and Minah Oh , Multigrid in a weighted space arising from axisymmetric electromagnetics	2033
Qiya Hu, Shi Shu, and Junxian Wang , Nonoverlapping domain decomposition methods with a simple coarse space for elliptic problems	2059
James H. Bramble, Joseph E. Pasciak, and Dimitar Trenev , Analysis of a finite PML approximation to the three dimensional elastic wave scattering problem	2079
José L. López and Ester Pérez Sinués , Two-point Taylor expansions and one-dimensional boundary value problems	2103
Benjamin Stamm and Thomas P. Wihler , hp -Optimal discontinuous Galerkin methods for linear elliptic problems	2117
Konstantinos Chrysafinos and Noel J. Walkington , Discontinuous Galerkin approximations of the Stokes and Navier-Stokes equations ..	2135
Thirupathi Gudi , A new error analysis for discontinuous finite element methods for linear elliptic problems	2169
Qinian Jin , On a class of frozen regularized Gauss-Newton methods for nonlinear inverse problems	2191
Xianjin Chen and Jianxin Zhou , A local min-max-orthogonal method for finding multiple solutions to noncooperative elliptic systems	2213
Guo Ben-yu and Jia Hong-li , Spectral method on quadrilaterals	2237
George Kvernadze , Approximation of the discontinuities of a function by its classical orthogonal polynomial Fourier coefficients	2265
A. López García and E. B. Saff , Asymptotics of greedy energy points ..	2287
Yingquan Wu , More on solving systems of power equations	2317
Terence Tao and Van Vu , Smooth analysis of the condition number and the least singular value	2333
Bartosz Żrałek , Using partial smoothness of $p - 1$ for factoring polynomials modulo p	2353
David Harvey , A multimodular algorithm for computing Bernoulli numbers ..	2361
Houria Baaziz , Equations for the modular curve $X_1(N)$ and models of elliptic curves with torsion points	2371
Qiang Wu , The smallest Perron numbers	2387

Yannick Saouter and Patrick Demichel, A sharp region where $\pi(x) - \text{li}(x)$ is positive	2395
Volker Ziegler, On a family of Thue equations of degree 16	2407
Thotsaphon Thongjunthug, Computing a lower bound for the canonical height on elliptic curves over number fields	2431
Graeme L. Cohen and Ronald M. Sorli, Odd harmonic numbers exceed 10^{24}	2451

INDEX TO VOLUME 79 (2010)

- Alfonsi, Aurélien. *High order discretization schemes for the CIR process: Application to affine term structure and Heston models*, 209
- Alkauskas, Giedrius. *The Minkowski question mark function: explicit series for the dyadic period function and moments*, 383
- Ammari, Habib, Elena Beretta, Elisa Francini, Hyeonbae Kang, and Mikyoung Lim. *Optimization algorithm for reconstructing interface changes of a conductivity inclusion from modal measurements*, 1757
- Ash, Avner, Paul E. Gunnells, and Mark McConnell. *Cohomology of congruence subgroups of $SL_4(\mathbb{Z})$. III*, 1811
- Baaziz, Houria. *Equations for the modular curve $X_1(N)$ and models of elliptic curves with torsion points*, 2371
- Bailey, D. H., J. M. Borwein, and R. E. Crandall. *Advances in the theory of box integrals*, 1839
- Bañas, Ľubomír, and Andreas Prohl. *Convergent finite element discretization of the multi-fluid nonstationary incompressible magnetohydrodynamics equations*, 1957
- Bao, Gang, Peijun Li, and Haijun Wu. *An adaptive edge element method with perfectly matched absorbing layers for wave scattering by biperiodic structures*, 1
- Bartels, Sören. *Numerical analysis of a finite element scheme for the approximation of harmonic maps into surfaces*, 1263
- Ben-yu, Guo, and Jia Hong-li. *Spectral method on quadrilaterals*, 2237
- Beretta, Elena. *See* Ammari, Habib
- van den Berg, Jan Bouwe, Jean-Philippe Lessard, and Konstantin Mischaikow. *Global smooth solution curves using rigorous branch following*, 1565
- Bernardi, Christine, Monique Dauge, and Yvon Maday. *The lifting of polynomial traces revisited*, 47
- Berrizbeitia, Pedro, and Boris Iskra. *Gaussian Mersenne and Eisenstein Mersenne primes*, 1779
- Billerey, Nicolas, and Luis V. Dieulefait. *Solving Fermat-type equations $x^5 + y^5 = dz^p$* , 535
- Bini, Dario A., Beatrice Meini, and Federico Poloni. *An effective matrix geometric mean satisfying the Ando–Li–Mathias properties*, 437
- Bokanowski, Olivier, Nicolas Forcadel, and Hasnaa Zidani. *L^1 -error estimates for numerical approximations of Hamilton-Jacobi-Bellman equations in dimension 1*, 1395
- Bornemann, Folkmar. *On the numerical evaluation of Fredholm determinants*, 871
- Borwein, J. M. *See* Bailey, D. H.
- Bramble, James H., Joseph E. Pasciak, and Dimitar Trenev. *Analysis of a finite PML approximation to the three dimensional elastic wave scattering problem*, 2079
- Bremner, A., and Jean-Joël Delorme. *On equal sums of ninth powers*, 603
- Burton, Benjamin A. *Optimizing the double description method for normal surface enumeration*, 453
- Capparelli, Stefano, Alberto Del Fra, and Carlo Scìò. *On the span of polynomials with integer coefficients*, 967
- Castro, Manuel J., Alberto Pardo, Carlos Parés, and E. F. Toro. *On some fast well-balanced first order solvers for nonconservative systems*, 1427
- Chen, Jiazhe. *See* Cheng, Qi
- Chen, Xianjin, and Jianxin Zhou. *A local min-max-orthogonal method for finding multiple solutions to noncooperative elliptic systems*, 2213
- Chen, Yanping, and Tao Tang. *Convergence analysis of the Jacobi spectral-collocation methods for Volterra integral equations with a weakly singular kernel*, 147
- Cheng, Qi, Xianmeng Meng, Celi Sun, and Jiazhe Chen. *Bounding the sum of square roots via lattice reduction*, 1109
- Christlieb, Andrew, Benjamin Ong, and Jing-Mei Qiu. *Integral deferred correction methods constructed with high order Runge–Kutta integrators*, 761
- Chrysafinos, Konstantinos, and Noel J. Walkington. *Discontinuous Galerkin approximations of the Stokes and Navier-Stokes equations*, 2135
- Chu, C.-C., I. G. Graham, and T.-Y. Hou. *A new multiscale finite element method for high-contrast elliptic interface problems*, 1915
- Cockburn, Bernardo, Jayadeep Gopalakrishnan, and Johnny Guzmán. *A new elasticity element made for enforcing weak stress symmetry*, 1331
- Cockburn, Bernardo, Jayadeep Gopalakrishnan, and Francisco-Javier Sayas. *A projection-based error analysis of HDG methods*, 1351

- Coclite, G. M., S. Mishra, and N. H. Risebro. *Convergence of an Engquist-Osher scheme for a multi-dimensional triangular system of conservation laws*, 71
- Cohen, Graeme L., and Ronald M. Sorli. *Odd harmonic numbers exceed 10^{24}* , 2451
- Connors, J., and W. Layton. *On the accuracy of the finite element method plus time relaxation*, 619
- Copeland, Dylan M., Jayadeep Gopalakrishnan, and Minah Oh. *Multigrid in a weighted space arising from axisymmetric electromagnetics*, 2033
- Coquel, Frédéric, Quang Long Nguyen, Marie Postel, and Quang Huy Tran. *Entropy-satisfying relaxation method with large time-steps for Euler IBVPs*, 1493
- Corn, Patrick. *Tate-Shafarevich groups and K3 surfaces*, 563
- Cosset, Romain. *Factorization with genus 2 curves*, 1191
- Crandall, R. E. *See* Bailey, D. H.
- Curtis, Christopher W., and Bernard Deconinck. *On the convergence of Hill's method*, 169
- Dabbaghian, Vahid, and John D. Dixon. *Computing matrix representations*, 1801

13-01 <i>Instructional exposition (textbooks, tutorial papers, etc.)</i>			
SHOUP, VICTOR	4	A computational introduction to number theory and algebra	1231
35-XX Partial differential equations			
35Kxx <i>Parabolic equations and systems</i>			
ASCHER, URI M.	1	Numerical methods for evolutionary differential equations	613
35Lxx <i>Partial differential equations of hyperbolic type</i>			
ASCHER, URI M.	1	Numerical methods for evolutionary differential equations	613

INDEX OF REVIEWS BY SUBJECT OF WORK REVIEWED

65-XX Numerical analysis

65-01 *Instructional exposition (textbooks, tutorial papers, etc.)*

ASCHER, URI M. 1 Numerical methods for evolutionary differential equations 613

65G20 *Algorithms with automatic result verification*

MOORE, RAMON E., R. BAKER 2 Introduction to interval analysis 615
KEARFOTT, & MICHAEL J.
CLOUD (EDITORS)

65G30 *Interval and finite arithmetic*

MOORE, RAMON E., R. BAKER 2 Introduction to interval analysis 615
KEARFOTT, & MICHAEL J.
CLOUD (EDITORS)

65G40 *General methods in interval analysis*

MOORE, RAMON E., R. BAKER 2 Introduction to interval analysis 615
KEARFOTT, & MICHAEL J.
CLOUD (EDITORS)

65G50 *Roundoff error*

MOORE, RAMON E., R. BAKER 2 Introduction to interval analysis 615
KEARFOTT, & MICHAEL J.
CLOUD (EDITORS)

65K05 *Mathematical programming algorithms*

CONN, ANDREW R., KATYA 5 Introduction to derivative-free optimization 1867
SCHEINBERG, & LUIS N.
VICENTE

ITO, KAZUFUMI, & KARL 3 Lagrange multiplier approach to variational problems and applications 617
KUNISCH (EDITORS)

65K10 *Optimization and variational techniques*

CONN, ANDREW R., KATYA 5 Introduction to derivative-free optimization 1867
SCHEINBERG, & LUIS N.
VICENTE

ITO, KAZUFUMI, & KARL 3 Lagrange multiplier approach to variational problems and applications 617
KUNISCH (EDITORS)

65Lxx *Ordinary differential equations*

ASCHER, URI M. 1 Numerical methods for evolutionary differential equations 613

65Mxx *Partial differential equations, initial value and time-dependent initial-boundary value problems*

ASCHER, URI M. 1 Numerical methods for evolutionary differential equations 613

90-XX Operations research, mathematical programming

90C48 *Programming in abstract spaces*

ITO, KAZUFUMI, & KARL 3 Lagrange multiplier approach to variational problems and applications 617
KUNISCH (EDITORS)

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 79 (2010) are as follows: for paper delivery, US\$530 list, US\$424 institutional member, US\$477 corporate member, US\$345 member of CBMS organizations; US\$318 individual member; for electronic delivery, US\$477 list, US\$382 institutional member, US\$429 corporate member, US\$310 member of CBMS organizations, US\$286 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$30 for surface delivery outside the United States and India; US\$41 to India. Expedited delivery to destinations in North America is US\$30; elsewhere US\$77. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation (ISSN 0025-5718) is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 79, No. 269

January 2010

Gang Bao, Peijun Li, and Haijun Wu , An adaptive edge element method with perfectly matched absorbing layers for wave scattering by bi-periodic structures	1
Ziqing Xie and Zhimin Zhang , Uniform superconvergence analysis of the discontinuous Galerkin method for a singularly perturbed problem in 1-D	35
Christine Bernardi, Monique Dauge, and Yvon Maday , The lifting of polynomial traces revisited	47
G. M. Coclite, S. Mishra, and N. H. Risebro , Convergence of an Engquist–Osher scheme for a multi-dimensional triangular system of conservation laws	71
Jérôme Droniou , A numerical method for fractal conservation laws	95
Aurélien Monteillet , Convergence of approximation schemes for nonlocal front propagation equations	125
Yanping Chen and Tao Tang , Convergence analysis of the Jacobi spectral-collocation methods for Volterra integral equations with a weakly singular kernel	147
Christopher W. Curtis and Bernard Deconinck , On the convergence of Hill’s method	169
Jonas Haehnle and Andreas Prohl , Approximation of nonlinear wave equations with nonstandard anisotropic growth conditions	189
Aurélien Alfonsi , High order discretization schemes for the CIR process: Application to affine term structure and Heston models	209
N. S. Hoang and A. G. Ramm , Dynamical systems method for solving nonlinear equations with monotone operators	239
Xiaoming Wang , Approximation of stationary statistical properties of dissipative dynamical systems: Time discretization	259
Othmar Koch, Roswitha März, Dirk Praetorius, and Ewa Weinmüller , Collocation methods for index 1 DAEs with a singularity of the first kind	281
Gašper Jaklič, Jernej Kozak, Marjeta Krajnc, Vito Vitrih, and Emil Žagar , On interpolation by Planar cubic G^2 pythagorean-hodograph spline curves	305
G. Mastroianni and I. Notarangelo , A Lagrange-type projector on the real line	327
Heping Wang and Sofiya Ostrovska , The norm estimates for the q-Bernstein operator in the case $q > 1$	353
Guillermo López Lagomasino, Domingo Pestana, José M. Rodríguez, and Dmitry Yakubovich , Computation of conformal representations of compact Riemann surfaces	365
Giedrius Alkauskas , The Minkowski question mark function: explicit series for the dyadic period function and moments	383
Ren-Cang Li , Sharpness in rates of convergence for the symmetric Lanczos method	419

Dario A. Bini, Beatrice Meini, and Federico Poloni , An effective matrix geometric mean satisfying the Ando–Li–Mathias properties	437
Benjamin A. Burton , Optimizing the double description method for normal surface enumeration	453
Keith Matthews, John Robertson, and Jim White , Midpoint criteria for solving Pell’s equation using the nearest square continued fraction	485
Alina Ostafe and Igor E. Shparlinski , On the degree growth in some polynomial dynamical systems and nonlinear pseudorandom number generators	501
Bartosz Żrałek , A deterministic version of Pollard’s $p - 1$ algorithm	513
Nicolas Billerey and Luis V. Dieulefait , Solving Fermat-type equations $x^5 + y^5 = dz^p$	535
K. Rubin and A. Silverberg , Choosing the correct elliptic curve in the CM method	545
Patrick Corn , Tate-Shafarevich groups and $K3$ surfaces	563
Oliver Schirokauer , The number field sieve for integers of low weight	583
A. Bremner and Jean-Joël Delorme , On equal sums of ninth powers ..	603
Reviews and Descriptions of Tables and Books	613
Uri M. Ascher 1 , Ramon E. Moore, R. Baker Kearfott, and Michael J. Cloud, Editors 2 , Kazufumi Ito and Karl Kunisch, Editors 3	

Vol. 79, No. 270

April 2010

J. Connors and W. Layton , On the accuracy of the finite element method plus time relaxation	619
R. Eymard, T. Gallouët, R. Herbin, and J. C. Latché , A convergent finite element-finite volume scheme for the compressible Stokes problem. Part II: the isentropic case	649
Peter K. Moore and Marina Rangelova , A posteriori error estimation for hp-adaptivity for fourth-order equations	677
Mo Mu and Xiaohong Zhu , Decoupled schemes for a non-stationary mixed Stokes-Darcy model	707
Howard C. Elman, Darran G. Furnival, and Catherine E. Powell , $H(\text{div})$ preconditioning for a mixed finite element formulation of the diffusion problem with random data	733
Andrew Christlieb, Benjamin Ong, and Jing-Mei Qiu , Integral deferred correction methods constructed with high order Runge–Kutta integrators	761
Etienne Emmrich and Mechthild Thälhammer , Stiffly accurate Runge–Kutta methods for nonlinear evolution problems governed by a monotone operator	785
Li-Lian Wang , Analysis of spectral approximations using prolate spheroidal wave functions	807
Shuhuang Xiang and Haiyong Wang , Fast integration of highly oscillatory integrals with exotic oscillators	829

D. S. Lubinsky and A. Sidi , Positive interpolatory quadrature rules generated by some biorthogonal polynomials	845
H. Monien , Gaussian quadrature for sums: A rapidly convergent summation scheme	857
Folkmar Bornemann , On the numerical evaluation of Fredholm determinants	871
Bin Han , The structure of balanced multivariate biorthogonal multiwavelets and dual multiframelets	917
F. Y. Kuo, I. H. Sloan, G. W. Wasilkowski, and H. Woźniakowski , On decompositions of multivariate functions	953
Stefano Capparelli, Alberto Del Fra, and Carlo Sciò , On the span of polynomials with integer coefficients	967
Grzegorz W. Wasilkowski and Henryk Woźniakowski , On the exponent of discrepancies	983
Josef Dick and Peter Kritzer , Duality theory and propagation rules for generalized digital nets	993
Ibrahim Kirat , Disk-like tiles and self-affine curves with noncollinear digits	1019
Chang Heon Kim and Ja Kyung Koo , Generators of function fields of the modular curves $X_1(5)$ and $X_1(6)$	1047
T. Recio, J. R. Sendra, L. F. Tabera, and C. Villarino , Generalizing circles over algebraic extensions	1067
Carlos Rito , On equations of double planes with $p_g = q = 1$	1091
Qi Cheng, Xianmeng Meng, Celi Sun, and Jiazhe Chen , Bounding the sum of square roots via lattice reduction	1109
Byeong Moon Kim, Ji Young Kim, and Poo-Sung Park , The fifteen theorem for universal Hermitian lattices over imaginary quadratic fields	1123
Luis Dieulefait, Lucio Guerberoff, and Ariel Pacetti , Proving modularity for a given elliptic curve over an imaginary quadratic field	1145
Siguna Müller , On the existence and non-existence of elliptic pseudoprimes	1171
Romain Cosset , Factorization with genus 2 curves	1191
Jaap Korevaar and Herman te Riele , Average prime-pair counting formula	1209
Reviews and Descriptions of Tables and Books	1231
Victor Shoup	4

Alan Demlow and Charalambos Makridakis , Sharply local pointwise a posteriori error estimates for parabolic problems	1233
Sören Bartels , Numerical analysis of a finite element scheme for the approximation of harmonic maps into surfaces	1263
Daniele A. Di Pietro and Alexandre Ern , Discrete functional analysis tools for Discontinuous Galerkin methods with application to the incompressible Navier–Stokes equations	1303

Bernardo Cockburn, Jayadeep Gopalakrishnan, and Johnny Guzmán, A new elasticity element made for enforcing weak stress symmetry	1331
Bernardo Cockburn, Jayadeep Gopalakrishnan, and Francisco-Javier Sayas, A projection-based error analysis of HDG methods ...	1351
Gabriel N. Gatica, Norbert Heuer, and Francisco–Javier Sayas, A direct coupling of local discontinuous Galerkin and boundary element methods	1369
Olivier Bokanowski, Nicolas Forcadel, and Hasnaa Zidani, L^1 -error estimates for numerical approximations of Hamilton-Jacobi-Bellman equations in dimension 1	1395
Manuel J. Castro, Alberto Pardo, Carlos Parés, and E. F. Toro, On some fast well-balanced first order solvers for nonconservative systems	1427
Zhen-Huan Teng, Error bound between monotone difference schemes and their modified equations	1473
Frédéric Coquel, Quang Long Nguyen, Marie Postel, and Quang Huy Tran, Entropy-satisfying relaxation method with large time-steps for Euler IBVPs	1493
A. Ghorbel and R. Monneau, Well-posedness and numerical analysis of a one-dimensional non-local transport equation modelling dislocations dynamics	1535
Jan Bouwe van den Berg, Jean-Philippe Lessard, and Konstantin Mischaikow, Global smooth solution curves using rigorous branch following	1565
Veerle Ledoux, Simon J. A. Malham, and Vera Thümmler, Grassmannian spectral shooting	1585
Huiyuan Li and Jie Shen, Optimal error estimates in Jacobi-weighted Sobolev spaces for polynomial approximations on the triangle	1621
H. N. Mhaskar, F. J. Narcowich, J. Prestin, and J. D. Ward, L^p Bernstein estimates and approximation by spherical basis functions	1647
Avram Sidi, Asymptotic analysis of a generalized Richardson extrapolation process on linear sequences	1681

Volker Ziegler , On a family of Thue equations of degree 16	2407
Thotsaphon Thongjunthug , Computing a lower bound for the canonical height on elliptic curves over number fields	2431
Graeme L. Cohen and Ronald M. Sorli , Odd harmonic numbers exceed 10^{24}	2451

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submit/mcom, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of $\mathcal{T}\mathcal{E}\mathcal{X}$, using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the highly preferred format of $\mathcal{T}\mathcal{E}\mathcal{X}$, but author packages are also available in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ or plain $\mathcal{T}\mathcal{E}\mathcal{X}$ are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ users will find that $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the same as $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ with additional

commands to simplify the typesetting of mathematics, and users of plain T_EX should have the foundation for learning $\mathcal{A}\mathcal{M}\mathcal{S}$ -L^AT_EX.

Authors may retrieve an author package for *Mathematics of Computation* from www.ams.org/mcom/mcomauthorpac.html or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter your complete email address as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify $\mathcal{A}\mathcal{M}\mathcal{S}$ -L^AT_EX or $\mathcal{A}\mathcal{M}\mathcal{S}$ -T_EX and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

T_EX files available upon request. T_EX files are available upon request for authors by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate the postal address to which a CD should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T_EX files cannot be guaranteed to run through the author's version of T_EX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T_EX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
