Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See Information for Authors at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. Mathematics of Computation is published bimonthly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 91 (2022) are as follows: for paper delivery, US$846.00 list, US$676.80 institutional member, US$761.40 corporate member, US$507.60 individual member; for electronic delivery, US$744.00 list, US$595.20 institutional member, US$669.60 corporate member, US$446.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US$6 for delivery within the United States; US$31 for delivery outside the United States. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. All orders must be accompanied by payment. Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2213 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Requests for permission to reuse portions of AMS publication content are handled by the Copyright Clearance Center. For more information, please visit www.ams.org/publications/pubpermissions.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213 USA. Periodicals postage is paid at Providence, Rhode Island. # MA*EMATICS OF COMPUTATION

## CONTENTS

Vol. 91, No. 338  
November 2022

Dong Li, *Why large time-stepping methods for the Cahn-Hilliard equation is stable*  
2501

Bo Gong, Jiguang Sun, Tiara Turner, and Chunxiong Zheng, *Finite element/holomorphic operator function method for the transmission eigenvalue problem*  
2517

Chupeng Ma and Robert Scheichl, *Error estimates for discrete generalized FEMs with locally optimal spectral approximations*  
2539

Johnny Guzmán, Anna Lischke, and Michael Neilan, *Exact sequences on Worsey–Farin splits*  
2571

Wansheng Wang and Lijun Yi, *Delay-dependent elliptic reconstruction and optimal \( L^\infty(L^2) \) a posteriori error estimates for fully discrete delay parabolic problems*  
2609

Bruno Després, Maria El Ghaoui, and Toni Sayah, *A Trefftz method with reconstruction of the normal derivative applied to elliptic equations*  
2645

Assyr Abdulle, Marcus J. Grote, and Giacomo Rosilho de Souza, *Explicit stabilized multirate method for stiff differential equations*  
2681

David Krieg, Erich Novak, and Mathias Sonnleitner, *Recovery of Sobolev functions restricted to iid sampling*  
2715

Elisenda Feliu and AmirHosein Sadeghimanesh, *Kac-Rice formulas and the number of solutions of parametrized systems of polynomial equations*  
2739

Josef Dick, Takashi Goda, and Kosuke Suzuki, *Component-by-component construction of randomized rank-1 lattice rules achieving almost the optimal randomized error rate*  
2771

Sotirios E. Notaris, *Anti-Gaussian quadrature formulae of Chebyshev type*  
2803

Ariel Pacetti and Lucas Villagran Torcomian, *Q-Curves, Hecke characters and some Diophantine equations*  
2817

Thomas Rüd, *Explicit Tamagawa numbers for certain algebraic tori over number fields*  
2867

Colin Faverjon and Marina Poulet, *An algorithm to recognize regular singular Mahler systems*  
2905

James Rickards, *Improved computation of fundamental domains for arithmetic Fuchsian groups*  
2929

Guillem Blanco, *An algorithm for Hodge ideals*  
2955

Sandra Di Rocco, David Eklund, and Oliver Gåfvert, *Sampling and homology via bottlenecks*  
2969
INDEX TO VOLUME 91 (2022)

Abdulle, Assyr, Marcus J. Grote, and Giacomo Rosilho de Souza. Explicit stabilized multirate method for stiff differential equations, 2681
Abreu, Alex, Sally Andria, and Marco Pacini. Abel maps for nodal curves via tropical geometry, 1971
Akgün, Ö., M. Mereb, and L. Vendramin. Enumeration of set-theoretic solutions to the Yang–Baxter equation, 1469
Amzallag, Eli, Andrei Minchenko, and Gleb Pogudin. Degree bound for toric envelope of a linear algebraic group, 1501
Andria, Sally. See Abreu, Alex
Angelini, Elena, and Luca Chiantini. Minimality and uniqueness for decompositions of specific ternary forms, 973
Asif, Sualeh, Francesc Fité, and Dylan Pentland, contributor A. V. Sutherland. Computing L-polynomials of Picard curves from Cartier–Manin matrices, 943
Audet, Charles. See Bingane, Christian
Banjai, Lehel, and Charalambos G. Makridakis. A posteriori error analysis for approximations of time-fractional subdiffusion problems, 1711
Bao, Weizhu, Yue Feng, and Chunmei Su. Uniform error bounds of time-splitting spectral methods for the long-time dynamics of the nonlinear Klein–Gordon equation with weak nonlinearity, 811
Barakat, Mohamed, and Markus Lange-Hegermann. An algorithmic approach to Chevalley’s Theorem on images of rational morphisms between affine varieties, 451
Barbulescu, Razvan, and Sudarshan Shinde. A classification of ECM-friendly families of elliptic curves using modular curves, 1405
Bazan, Erick Rodriguez. See Hubert, Evelyne
Beltrán, Carlos, Laurent Bétermin, Peter Grabner, and Stefan Steinerberger. How well-conditioned can the eigenvector problem be?, 1237
Bender, Matías R., and Simon Telen. Toric eigenvalue methods for solving sparse polynomial systems, 2397
Benoit, Antoine. Stability of finite difference schemes approximation for hyperbolic boundary value problems in an interval, 1171
Bétermin, Laurent. See Beltrán, Carlos
Bingane, Christian, and Charles Audet. The equilateral small octagon of maximal width, 2027
Blanco, Guillel. An algorithm for Hodge ideals, 2955
Blanes, S., F. Casas, P. Chartier, and A. Escorihuela-Tomàs. On symmetric-conjugate composition methods in the numerical integration of differential equations, 1739
Bringmann, Kathrin, and Ben Kane. Class numbers and representations by ternary quadratic forms with congruence conditions, 295
Brinkmann, Gunnar, Jan Goedgebeur, and Brendan D. McKay. The minimality of the Georges–Kelmans graph, 1483
Calvo, María Cabrera, Frédéric Rousset, and Katharina Schratz. Time integrators for dispersive equations in the long wave regime, 2197
Cangiani, Andrea, Zhaonan Dong, and Emmanuil H. Georgoulis. hp-version discontinuous Galerkin methods on essentially arbitrarily-shaped elements, 1
Carrillo, José A. See Gutleb, Timon S.
Carstensen, Carsten, and Stefan A. Sauter. Crouzeix–Raviart triangular elements are inf-sup stable, 2041
Casas, F. See Blanes, S.
Chada, Neil K., and Xin T. Tong. Convergence acceleration of ensemble Kalman inversion in nonlinear settings, 1247
Chartier, P. See Blanes, S.
Chartier, Philippe, Mohammed Lemou, and Léopold Trémant. A uniformly accurate numerical method for a class of dissipative systems, 843
Chaumont-Frétet, T., A. Ern, and M. Vohralík. Stable broken H(curl) polynomial extensions and p-robust a posteriori error estimates by broken patchwise equilibration for the curl–curl problem, 37
Chen, Long, and Xuehai Huang. Finite elements for divdiv conforming symmetric tensors in three dimensions, 1107
Chen, Long. A finite element elasticity complex in three dimensions, 2009
Chen, Swaine L., and Nico M. Temme.  *A distribution function from population genetics statistics using Stirling numbers of the first kind: Asymptotics, inversion and numerical evaluation*, 871

Chen, Xiaojun.  *See* Li, Chao

Chiantini, Luca.  *See* Angelini, Elena

Cohn, Henry, and Nicholas Triantafillou.  *Dual linear programming bounds for sphere packing via modular forms*, 491

Cui, Jianbo, Luca Dieci, and Haomin Zhou.  *Time discretizations of Wasserstein–Hamiltonian flows*, 1019

Cui, Jianbo, Jialin Hong, and Derui Sheng.  *Density function of numerical solution of splitting AVF scheme for stochastic Langevin equation*, 2283

Cui, Tiangang.  *See* Zahm, Olivier

Dahmen, Wolfgang, Rob Stevenson, and Jan Westerdip.  *Accuracy controlled data assimilation for parabolic problems*, 557

Dembélé, Lassina.  *On the existence of abelian surfaces with everywhere good reduction*, 1381

Desprès, Bruno, Maria El Ghaoui, and Toni Sayah.  *A Trefftz method with reconstruction of the normal derivative applied to elliptic equations*, 2645

Di Rocco, Sandra, David Eklund, and Oliver Gafvert.  *Sampling and homology via bottlenecks*, 2969

Dick, Josef, Takashi Goda, and Kosuke Suzuki.  *Component-by-component construction of randomized rank-1 lattice rules achieving almost the optimal randomized error rate*, 2771

Dieci, Luca.  *See* Cui, Jianbo

Doerr, Benjamin.  *A sharp discrepancy bound for jittered sampling*, 1871

Dong, Zhaonan.  *See* Cangiani, Andrea

Dörich, Benjamin, and Jan Leibold.  *Full discretization error analysis of exponential integrators for semilinear wave equations*, 1687

Drake, Dow, Jay Gopalakrishnan, Joachim Schöberl, and Christoph Wintersteiger.  *Convergence analysis of some tent-based schemes for linear hyperbolic systems*, 699

Eklund, David.  *See* Di Rocco, Sandra

El Ghaoui, Maria.  *See* Desprès, Bruno

Ern, A.  *See* Chaumont-Frelet, T.

Ernvall-Hytyinen, Anne-Maria, and Neea Palojärvi.  *Explicit bound for the number of primes in arithmetic progressions assuming the Generalized Riemann Hypothesis*, 1317

Escorihuela-Tomás, A.  *See* Blanes, S.

Faverjon, Colin, and Marina Poulet.  *An algorithm to recognize regular singular Mahler systems*, 2905

Feireisl, Eduard, Mária Lukáčová-Medviďová, Simon Schneider, and Bangwei She.  *Approximating viscosity solutions of the Euler system*, 2129

Feischl, Michael.  *Inf-sup stability implies quasi-orthogonality*, 2059

Feliu, Elisenda, and AmirHosein Sadeghimanesh.  *Kac-Rice formulas and the number of solutions of parametrized systems of polynomial equations*, 2739

Feng, Yue.  *See* Bao, Weizhu

Fité, Francesc.  *See* Asif, Sualch

Frei, Christopher, and Rodolphe Richard.  *Constructing abelian extensions with prescribed norms*, 381

Führer, Thomas.  *Multilevel decompositions and norms for negative order Sobolev spaces*, 183

Gafvert, Oliver.  *See* Di Rocco, Sandra

Garde, Henrik, and Nuutti Hyvönen.  *Series reversion in Calderón’s problem*, 1925

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/mcom.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer-reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/mcom, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2213 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Mathematics of Computation and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in \LaTeX. To this end, the Society has prepared \LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \LaTeX style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for Mathematics of Computation from www.ams.org/mcom/mcomauthorpac.html. The AMS Author Handbook is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.
**After acceptance.** The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/authors/journals.html](http://www.ams.org/authors/journals.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

**AMS policy on making changes to articles after publication.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.
