Differential Equations: From Calculus to Dynamical Systems

Virginia W. Noonburg, *University of Hartford,
West Hartford, CT*

A thoroughly modern textbook for the sophomore-level differential equations course, its examples and exercises emphasize modeling not only in engineering and physics but also in applied mathematics and biology. There is an early introduction to numerical methods and, throughout, a strong emphasis on the qualitative viewpoint of dynamical systems.

This second edition of Noonburg's best-selling textbook includes two new chapters on partial differential equations, making the book usable for a two-semester sequence in differential equations. It includes exercises, examples, and extensive student projects taken from the current mathematical and scientific literature.

AMS/MAA Textbooks, Volume 43; 2019;
402 pages; Hardcover; ISBN: 978-1-4704-4400-6;
