## Nonlinear Functional Analysis: A First Course Second Edition

**S. Kesavan**, *Institute of  
Mathematical Sciences,  
Chenna, India*

The purpose of this book is to provide an introduction to the theory of the topological

degree and to some variational methods used in the solution of some nonlinear equations formulated in Banach or Hilbert spaces. While the choice of topics and the treatment have been kept sufficiently general so as to interest all students of higher mathematics, the material presented will be particularly useful for students aspiring to work in the applications of mathematics, especially in the area of partial differential equations.
