Page 836, Equation (2.7). The right hand member should be changed from "1" to "exp $\{-2\lambda/\gamma^{1/2}\}$."

ERRATA, VOLUME 9

R. E. Edwards, *Bounded functions and Fourier transforms*, pp. 440–446.

The conclusion of Proposition 1 is in general false. When corrected it should read that h is essentially integrable for σ; and in equation (2) $\int |h|\, d\sigma$ should be interpreted as the essential upper integral $\bar{\sigma}*(|f|)$. See Bourbaki, *Elêments de mathématique*, XXI, *Intégration*, Chapter 5, §2, Actualités Sci. Ind., no. 1244, Paris, 1956. The original statement of the proposition is valid if Y is either σ-finite or discrete, the latter situation obtaining in the main theorem. Only trivial modifications are needed to adapt the proof to the general situation.

R. M. Robinson, *A report on primes of the form* $k \cdot 2^n + 1$ *and on factors of Fermat numbers*, pp. 673–681.
