Journals Published by the
American Mathematical Society

Bulletin of the American Mathematical Society
This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, research problems and a department of research announcements.

One volume of six numbers is planned for 1963. The subscription price is $7.00. The prices of back volumes, insofar as they are available, are as follows: vols. 1–27, 29 (1894–1921, 1923), $23.50 each; vol. 28 (1922), $19.70; vols 30–35 (1924–1929), $20.00 each; vols. 36–55 (1930–1949), $28.00 each; vols. 56–68 (1950–1962), $14.00.

Proceedings of the American Mathematical Society
This journal is devoted entirely to research in pure and applied mathematics, and is devoted principally to the publication of original papers of moderate length. A department called Shorter Notes was established in 1961. The purpose of this department is to publish very short papers (maximum length, 1 printed page) of an unusually elegant and polished character, for which there is normally no other outlet. The definitive new proof of an important and long-known theorem, an illuminating new fact, or an interesting lemma used for proof of a theorem in a different field are examples of subjects suitable for publication in this department.

Articles for insertion in the PROCEEDINGS should be typewritten, double spaced. The maximum length of an acceptable paper is 8 printed pages. (A page of the PROCEEDINGS contains an average of 400 words; a typewritten page contains an average of 300 words. A rough rule of thumb, accordingly, is that under 10 typewritten pages is probably within the allowed limit, but over 11 typewritten pages is probably not.) The greatest possible care should be taken in preparing the manuscript and if necessary The Manual for Authors published by the Society should be consulted. The authors should keep a complete copy.

Papers in algebra and number theory should be sent to Alex Rosenberg, Department of Mathematics, Cornell University, Ithaca, New York or George Whaples, Department of Mathematics, Indiana University, Bloomington, Indiana; in probability, real variables, logic, and foundations to P. R. Halmos, Department of Mathematics, University of Michigan, Ann Arbor, Michigan; in abstract analysis to either P. R. Halmos or Alex Rosenberg; in geometry and topology to Eldon Dyer, Eckhart Hall, University of Chicago, Chicago 37, Illinois; in other branches of analysis, applied mathematics, and all other fields to M. H. Heins, Department of Mathematics, University of Illinois, Urbana, Illinois or Fritz John, Institute of Mathematical Sciences, 4 Washington Place, New York 3, New York. All other communications from authors regarding proofs and changes of address for mailing galley proof should be sent to the Editorial Department, American Mathematical Society, 190 Hope Street, Providence 6, Rhode Island.

One volume of six numbers is planned for 1963. The subscription price is $11.00. Vols. 1–13 (1950–1962) are available at the price of $14.00 each. Volume 1 was published in 1950.

Transactions of the American Mathematical Society
This journal is devoted entirely to research in pure and applied mathematics, and includes in general, longer memoirs than the PROCEEDINGS.

Four volumes of three numbers each will be published in 1964. The price per volume is $8.00. All inquiries for volumes 1–69 should be directed to Johnson Reprint Corporation, 111 Fifth Avenue, New York 3, New York. Orders for volumes 70–108 should be directed to the American Mathematical Society; the price for back issues insofar as they are available is $4.00 per issue (vols. 78–89 contain 2 issues, volumes 70–77 and 90–108 contain 3 issues).

The PROCEEDINGS of the AMERICAN MATHEMATICAL SOCIETY is published bi-monthly, in February, April, June, August, October, and December. Price per annual volume is $11.00. Subscriptions, orders for back numbers, and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, 190 Hope Street, Providence 6, R. I.

Second-class postage paid at Providence, Rhode Island and additional mailing offices. Authorization to mail under the authority of the act of August 24, 1912, as amended by the act of August 4, 1947 (sec. 34.21, P. L. & R.). Acceptance for mailing at the special rate of postage provided for in section 34.40, paragraph d., P. L. & R.

INDEX TO VOLUME 14

*Starred items are “Shorter Notes”

Adler, R. L. A note on the entropy of skew product transformations, 665, 1000.

Akiyoshi, E. J. An interpolation series, 559.

Andô, Tsuyoshi. On hyponormal operators, 290.

Artzy, R. Isotopy and parastrophy of quasigroups, 429.

Aumann, Georg. Approximation by step functions, 477.

Banks, Dallas. An integral inequality, 823.

Bateman, P. T., Kohlbecker, E. E. and Tull, J. P. On a theorem of Erdös and Fuchs in additive number theory, 278.

Bernstein, D. L. See Coon, G. A.

Berri, M. P. and Sorgenfrey, R. H. Minimal regular spaces, 454.

Bierstedt, R. G. and Mills, W. H. On the bound for a pair of consecutive quartic residues, 628.

Blackwell, David and Dubins, L. E. Sharp bounds on the distribution of the Hardy-Littlewood maximal function, 450.

Blattner, R. J. Positive definite measures, 423.

Blum, J. R. and Hanson, D. L. A note on ergodic transformations, 718.

Bolker, E. D. Inverse limits of solvable groups, 147.

Boyer, B. J. and Holder, L. I. A generalization of absolute Rieszian summability, 459.

Brodkey, J. S. A note on finite groups with an abelian Sylow group, 132.

Brunk, H. D. On an extension of the concept conditional expectation, 298.

Buckholtz, J. D. Concerning an approximation of Copson, 564.

Column sequences in Hausdorff matrices, 837.

Bush, G. C. Note on an embedding theorem of Adyan, 597.

Carlitz, L. A sequence of integers related to the Bessell functions, 1.

A note on a problem of Dickson, 98.

A note on permutations in an arbitrary field, 101.

Ceder, J. G. Compactness and semi-continuous carriers, 991.

Chao, C.-Y. On a problem of C. Berge, 80.

Cohen, H. J. and Supnick, Fred. Concerning real numbers whose powers have nonintegral differences, 626.

Cohn, J. H. E. On the value of determinants, 581.

Cross, George. The relation between two symmetric integrals, 185.

Crowell, R. H. Invertible isotopies, 658.

Curtis, P. C, Jr. Divergence of approximating polynomials, 713.

Darst, R. B. A remark on universal sigma integrability, 861.

Davis, A. S. Fixed point theorem for contractions of a well-chained topological space, 981.

The uniform continuity of continuous functions on a topological space, 977.
Dawson, D. F. *On certain sequence to sequence transformations which preserve convergence*, 542.

Deckard, Don and Pearcy, Carl. *On matrices over the ring of continuous complex valued functions on a Stonian space*, 322.

--- Another class of invertible operators without square roots, 445.

DeMar, R. F. *Vanishing central differences*, 64.

*Drobot, S. A note on continued fractions*, 197.

Dubins, L. E. See Blackwell, David.

Edwards, C. H., Jr. *Open 3-manifolds which are simply connected at infinity*, 391.

Epstein, I. J. *Conditions for a matrix to commute with its integral*, 266.

Erdös, Paul and Stein, Sherman. *Sums of distinct unit fractions*, 126.

Forelli, Frank. *Invariant subspaces in L1*, 76.

Fort, M. K., Jr. *A wild sphere which can be pierced at each point by a straight line segment*, 994.

Gilmer, R. W. *Rings in which the unique primary decomposition theorem holds*, 777.

Glicksberg, I. *Function algebras with closed restrictions*, 158.

Bishop's generalized Stone-Weierstrass theorem for the strict topology, 329.

Goldberg, Seymour and Thorp, E. O. *On some open questions concerning strictly singular operators*, 334.

Goodman, A. W. *Analytic functions that take values in a convex region*, 60.

Haddock, A. G. *Some theorems related to a theorem of E. Helly*, 636.

Hanson, D. L. See Blum, J. R.

Hayden, T. L. *A convergence problem for continued fractions*, 546.

Hedstrom, G. W. *Equi-absolute convergence of eigenfunction expansions*, 483.

Heerema, Nickolas. *Embeddings of a p-adic field and its residue field in their power series rings*, 574.

Hertzig, David. *Rational normal matrices satisfying the incidence equation*, 878.

Herz, C. S. *A class of negative definite functions*, 670.

Herzog, F. See Edelstein, M.

Hochschild, G. *Rationally injective modules for algebraic linear groups*, 880.

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Two volumes will be published in 1964, Volume 27 and Volume 28. Each volume will consist of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Subscription price per volume of 7 issues is $50.00; 2 volumes per year $100.00. Back issues: volumes 1–16 (1940–1955) $42.00 per volume; volumes 17–25 (1956–1963) $50.00 per volume.

This journal contains the entire pure mathematics section of the Doklady Akademii Nauk SSSR in translation. It appears six times a year, each bimonthly issue corresponding to one volume of the Soviet Doklady. (The Doklady Akademii Nauk SSSR is issued three times a month, six issues constituting a volume.) Subscription price per volume $35.00. Single issues are $7.00. Volumes 1, 2, 3, and 4 (1960–1963) are available at $40.00 per volume, or $7.00 per issue.

This is a cover to cover translation into English of Acta Mathematica Sinica, published by Academia Sinica Peking, People's Republic of China. Acta Mathematica Sinica contains current research in all fields of pure mathematics. Two volumes, Vols. 2 and 3, are published in 1963. Volumes 1, 2, and 3 are available at $30.00 per volume; single issue price at one-third of the volume price.

This journal announces the programs of the meetings of the Society. It carries the abstracts of all contributed papers presented at the meetings of the Society and publishes news items of interest to mathematical scientists. The subscription price is $7.00 per annual volume of seven numbers. A single copy is $2.00. Orders for back volumes (back issues of the last two years only are available) are $14.00 per volume.

All communications should be addressed to the Editor, 190 Hope Street, Providence 6, Rhode Island. News items and insertions for each issue must be in the hands of the editor on or before the deadline for the abstracts for the papers to be presented in the meetings announced in that issue. These deadlines are published regularly on the back of the title page.

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields. Published by the Society for the National Academy of Sciences-National Research Council. Subscription price is $8.00 per volume of 4 issues. Single copies are $2.50. Back issues insofar as they are available are $3.00 per issue; $12.00 per volume. Write for specific information.
