Proceedings of the American Mathematical Society

This Journal is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

Shorter notes. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Preparation of the manuscript. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary. Submission of two copies of the manuscript is helpful, but by no means necessary.

Form of manuscript. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

Submission of manuscripts, Reprints and Address changes. See the last page of this issue.

Subscription information. Five volumes are planned for 1972; the subscription price is $100. Back number prices are as follows: Volumes 1–16, $14 per volume; Volumes 17–19, $18 per volume; Volumes 20–26, $30 per volume; Volumes 27–32, $27 per volume.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions, orders for back numbers and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P.O. Box 6248, Providence, R.I. 02904. Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

INDEX TO VOLUME 32

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. ALGEBRA AND NUMBER THEORY

05. Combinatorics
Carlitz, L. and Subbarao, M. V. *A simple proof of the quintuple product identity*, 42.
Chartrand, Gary, Kaugars, Agnis and Lick, Don R. *Critically n-connected graphs*, 63.

06. Order, Lattices, Ordered Algebraic Structures
Bernau, S. J. *The Boolean ring generated by a distributive lattice*, 423.

08. General Mathematical Systems
Davis, Robert C. *Multivalued operations and universal coalgebra*, 385.
Iskander, A. A. *On subalgebra lattices of universal algebras*, 32.

10. Number Theory
Berndt, Bruce C. *Two new proofs of Lerch’s functional equation*, 403.
Hagis, Peter, Jr. and McDaniel, Wayne L. *A new result concerning the structure of odd perfect numbers*, 13.
Williams, Kenneth S. *Representation of a binary quadratic form as a sum of two squares*, 368.

12. Algebraic Number Theory, Field Theory and Polynomials
Lando, Barbara A. *Jacobi’s bound for first order difference equations*, 8.
Mordeson, J. N. and Vinograde, B. *On high order derivations of fields*, 421.

13. Commutative Rings and Algebras
Hinohara, Yukitoshi. *On semilocal OP-rings*, 16.
Levitz, Kathleen B. *A characterization of general Z.P.I.-rings*, 376.
Wehien, Joseph A. *Cohomological dimension and global dimension of algebras*, 75.

14. Algebraic Geometry
Bresinsky, H. *Semigroups corresponding to algebroid branches in the plane*, 381.

15. Linear and Multilinear Algebra, Matrix Theory (finite and infinite)
Kodama, Tetsuo. *On the group indices of parasymplectic group of level F*, 349.
Markham, T. L. *Factorizations of nonnegative matrices*, 45.
Sinkhorn, Richard. *Continuous dependence on A in the D_A D_B theorems*, 395.

637
16. Associative Rings and Algebras
Fein, Burton. Embedding rational division algebras, 427.
Fieldhouse, David J. Regular modules, 49.
Mason, G. R. On self-injective group rings, 85.
Putcha, Mohan S., Wilson, Robert S. and Yaqub, Adil. Structure of rings satisfying certain identities on commutators, 57.
Putcha, Mohan S. and Yaqub, Adil. Rings satisfying monomial identities, 52.
Rant, William H. Left perfect rings that are right perfect and a characterization of Steinitz rings, 81.
Wehlen, Joseph A. Cohomological dimension and global dimension of algebras, 75.

17. Nonassociative Rings and Algebras
Wilson, Robert Lee. A characterization of p-reductive Lie algebras, 89.

18. Category Theory, Homological Algebra
Hinohara, Yukitoshi. On semilocal OP-rings, 16.
Peake, E. James and Peters, Galen R. Extension of algebraic theories, 358.
Roberts, Leslie G. $K_1$ of a commutative von Neumann regular ring, 425.
Wehlen, Joseph A. Cohomological dimension and global dimension of algebras, 75.

20. Group Theory and Generalizations
Cohn, J. H. E. A condition for a finite group to be cyclic, 48.
Hempel, John. Residual finiteness of surface groups, 323.
Hill, Paul. The number of isotype and l-pure subgroups of an abelian p-group, 69.
Hogan, Guy T. Elements of maximal order in finite p-groups, 37.
Kodama, Tetsuo. On the group indices of parasymplectic group of level F, 349.
Searby, D. G. and Wamsley, J. W. Minimal presentations for certain metabelian groups, 342.
Sidki, Said. Automorphism of a finite group scalar on the cosets of a subgroup, 399.
Stebe, Peter F. Conjugacy separability of groups of integer matrices, 1.

B. Analysis

26. Real Functions
Vasudeva, Harkrishan. On a characterisation of matrix functions which are differences of two monotone matrix functions, 531.

28. Measure and Integration
Akcoğlu, M. A. and Chacon, R. V. Approximation of commuting transformations, 111.
Kuelbs, J. and Mandrekar, V. The Wiener closure theorems for abstract Wiener spaces, 169.
Lewis, D. R. A vector measure with no derivative, 535.
Mukherjee, A. On the convolution equation $P = P*Q$ of Choquet and Deny for probability measures on semigroups, 457.
Pachl, Jan. An elementary proof of a Radon-Nikodým theorem for finitely additive set functions, 225.
Zander, Vernon. Fubini theorems for Orlicz spaces of Lebesgue-Bochner measurable functions, 102.
30. Functions of a Complex Variable
Barth, K. F. and Schneider, W. J. On a problem of Erdős concerning the zeros of the derivatives of an entire function, 229.
Davie, A. M. Bounded limits of analytic functions, 127.
Hag, Kari. A convergence theorem for limitärperiodisch T-fractions of rational functions, 491.
Noonan, J. W. On functions of bounded rotation, 91.
O'Malla, Heppé. Dirichlet finite biharmonic functions on the unit disk with distorted metrics, 521.

31. Potential Theory
Newman, James M. Coercive inequalities for certain classes of bounded regions, 120.
O'Malla, Heppé. Dirichlet finite biharmonic functions on the unit disk with distorted metrics, 521.
Singer, Ivan J. Dirichlet finite solutions of \( \Delta u = Pu \), 464.

32. Several Complex Variables and Analytic Spaces
Range, R. M. A small boundary for \( H^\infty \) on the polydisc, 253.

33. Special Functions
Gasper, George. An inequality of Turán type for Jacobi polynomials, 435.
Khan, I. A. Generating functions for Jacobi and related polynomials, 179.
Rowe, Paul P. Partially-orthogonal polynomials, 215.

34. Ordinary Differential Equations
Grimmer, R. Stability of a scalar differential equation, 452.
Hartman, Philip. On invariant sets and on a theorem of Ważewski, 511.
Hinton, Don. Solutions of \( r \left( y^{(m)} \right)^{n} + qy = 0 \) of class \( \mathcal{L}_{p}[0, \infty) \), 134.
Schrader, Keith. Second and third order boundary value problems, 247.
Sharma, R. R. An abstract measure differential equation, 503.

35. Partial Differential Equations
Arena, O. A strong maximum principle for quasilinear parabolic differential inequalities, 497.
Kazdan, Jerry L. and Warner, Frank W. Surfaces of revolution with monotonic increasing curvature and an application to the equation \( \Delta u = 1 - Ke^{2u} \) on \( S^2 \), 139.
Rosencrans, S. I. Derivation of the Hopf-Cole solution to Burgers' equation by stochastic integrals, 147.
Widder, D. V. Time-variable singularities for solutions of the heat equation, 209.

40. Sequences, Series, Summability
Isaacs, Godfrey L. The abscissa of absolute summability of Laplace integrals, 142.
Mazhar, S. M. On the absolute \( Nörlund \) summability factors of infinite series, 233.

41. Approximations and Expansions
Lambert, Joseph M. Simultaneous approximation and interpolation in \( l_{1} \), 150.
### Subject Index

#### 42. Fourier Analysis
- Kaufman, R. *Sets of multiplicity and differentiable functions*, 472.

#### 43. Abstract Harmonic Analysis
- Blozinski, Anthony P. *Convolution of L(p,q) functions*, 237.
- Dunkl, Charles F. and Ramirez, Donald E. *Existence and nonuniqueness of invariant means on L∞(G)*, 525.
- Ragozin, David L. and Rothschild, Linda Preiss. *Central measures on semisimple Lie groups have essentially compact support*, 585.
- Renaud, P. F. *Centralizers of the Fourier algebra of an amenable group*, 539.

#### 44. Integral Transforms, Operational Calculus
- Widder, D. V. *Time-variable singularities for solutions of the heat equation*, 209.

#### 46. Functional Analysis
- Blumenthal, Robert G. *The closed ideals of some Dirichlet and hypo-Dirichlet algebras*, 469.
- Conway, John B. *The compact operators are not complemented in L²(L²)*, 549.
- Eifler, Larry Q. *Peano curves in function algebras*, 537.
- Kaufman, R. *Sets of multiplicity and differentiable functions*, 472.
- Lewis, D. R. *A vector measure with no derivative*, 535.
- Roth, B. *Submodules of C(X) x ... x C(X)*, 543.

#### 47. Operator Theory
- Akcoglu, M. A. and Chacon, R. V. *Approximation of commuting transformations*, 111.
- Conway, John B. *The compact operators are not complemented in L²(L²)*, 549.
  * Deddens, James A. *A necessary condition for quasitriangularity*, 630.
- Dowson, H. R. and Spain, P. G. *An example in the theory of well-bounded operators*, 205.
  * Embry, Mary R. *An invariant subspace theorem*, 331.
- McIntosh, Alan. *On the comparability of A¹/² and A*¹/²*, 430.
  * Ruston, Anthony F. *On operators with rational resolvent*, 329.
- Simon, Barry. *A remark on groups with the fixed point property*, 623.
C. Applied Mathematics

94. Information and Communication, Circuits, Automata
   Roberson, Fred A. Recurrence and almost periodicity in a generative transformation group, 596.

D. Geometry

50. Geometry
   Narayana Rao, M. L. A flag transitive plane of order 49, 256.

53. Differential Geometry
   Kazdan, Jerry L. and Warner, Frank W. Surfaces of revolution with monotonic increasing curvature and an application to the equation $\Delta u = 1 - Ke^{2u}$ on $S^2$, 39.
   Vilms, Jaak. Submanifolds of Euclidean space with parallel second fundamental form, 263.

F. Statistics and Probability

60. Probability Theory and Stochastic Processes
   Brown, B. M. Erratum to “A general three-series theorem”, 634.
   LePage, Raoul D. Note relating Bochner integrals and reproducing kernels to series expansions on a Gaussian Banach space, 285.
   Mandrekar, V. A characterization of oscillatory processes and their prediction, 280.
   Mukherjea, A. On the convolution equation $P = P*Q$ of Choquet and Deny for probability measures on semigroups, 457.
   Park, W. J. On the equivalence of Gaussian processes with factorable covariance functions, 275.
   Tomkins, R. J. A generalization of Kolmogorov’s law of the iterated logarithm, 268.
   Wilkins, J. Ernest., Jr. The bold strategy in presence of house limit, 567.

G. Topology

22. Topological Groups, Lie Groups
   * Ragozin, David L. A normal subgroup of a semisimple Lie group is closed, 632.
   Ragozin, David L. and Rothschild, Linda Preiss. Central measures on semisimple Lie groups have essentially compact support, 585.
   Roberson, Fred A. Recurrence and almost periodicity in a generative transformation group, 596.
   Simon, Barry. A remark on groups with the fixed point property, 623.

54. General Topology
   Bennett, Donald E. A sufficient condition for countable-set aposyndesis, 578.
   Canfell, M. J. An algebraic characterization of dimension, 619.
   Chandler, Richard E. An alternative construction of $\beta X$ and $\nu X$, 315.
   Coppin, C. A. Continuous functions from a connected locally connected space into a connected space with a dispersion point, 625.
   D’Aristotle, Anthony J. A note on $\mathcal{L}$-realcompactifications, 615.
Hempel, John. *Residual finiteness of surface groups*, 323.
Kent, Joseph F. *A characterization of distal and point-distal minimal transformation groups*, 304.
Potoczny, H. B. *A nonparacompact space which admits a closure-preserving cover of compact sets*, 309.
Rice, M. D. *A short proof that metric spaces are realcompact*, 313.
Roberson, Fred A. *Recurrence and almost periodicity in a generative transformation group*, 596.

55. **Algebraic Topology**

Copeland, Arthur H., Jr. *H*-structures on products, 611.
* Feder, S. *On the embedding CP^n<=CP^m*, 327.
Gilbert, William J. *Homotopical nilpotence of the seven sphere*, 621.
Gutiérrez, M. A. *An exact sequence calculation for the second homotopy of a knot*, 571.

Vogt, R. M. *A note on homotopy equivalences*, 627.

57. **Manifolds and Cell Complexes**

* Feder, S. *On the embedding CP^n<=CP^m*, 327.
Gutiérrez, M. A. *An exact sequence calculation for the second homotopy of a knot*, 571.

Miller, John David. *Finite groups acting on spheres*, 289.
Roberson, Fred A. *Recurrence and almost periodicity in a generative transformation group*, 596.
* Stern, Ronald J. *The tangent microbundle of a suitable manifold*, 324.

58. **Global Analysis, Analysis on Manifolds**

Marsden, J. *Darboux's theorem fails for weak symplectic forms*, 590.
Singer, Ivan J. *Dirichlet finite solutions of \( \Delta u = Pu \)*, 464.

Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper.

**Algebra and algebraic number theory.**
Joseph J. Rotman, Department of Mathematics, University of Illinois, Urbana, Illinois 61801
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

**Modern or classical analysis and analytic number theory.**
Jacob Feldman, Department of Mathematics, University of California, Berkeley, California 94720
Lee A. Rubel, Department of Mathematics, University of Illinois, Urbana, Illinois 61801
Allen L. Shields, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104

**Algebraic geometry.**
George B. Seligman, Department of Mathematics, Yale University, New Haven, Connecticut 06520

**Set-theoretic and general topology.**
W. Wistar Comfort, Department of Mathematics, Wesleyan University, Middletown, Connecticut 06457

**Algebraic topology and all other types of geometry.**
Glen E. Bredon, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903.

**Applied mathematics, differential equations, and related areas of analysis.**
Fred G. Brauer, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

**Probability, statistics, and related fields.**
James D. Kuelbs, Department of Mathematics, 213 Van Vleck Hall, University of Wisconsin, Madison, Wisconsin 53706

**Logic, set theory, and related areas.**
Robert I. Soare, Department of Mathematics, University of Illinois at Chicago Circle, Chicago, Illinois 60680

All other communications should be addressed to the Managing Editor, Joseph J. Rotman, at the above address.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904.
Contents—Continued from back cover

A strong maximum principle for quasilinear parabolic differential inequalities. By O. Arena .................. 497
An abstract measure differential equation. By R. R. Sharma .................. 503
On invariant sets and on a theorem of Ważewski. By Philip Hartman ........ 511
Dirichlet finite biharmonic functions on the unit disk with distorted metrics. By Héppé O’Malla .................. 521
Existence and nonuniqueness of invariant means on L^0(G). By Charles F. Dunkl and Donald E. Ramirez .................. 525
On a characterization of matrix functions which are differences of two monotone matrix functions. By Harkrishan Vasudeva .................. 531
A vector measure with no derivative. By D. R. Lewis .................. 535
Peano curves in function algebras. By Larry Q. Eifler .................. 537
Centralizers of the Fourier algebra of an amenable group. By P. F. Renaud ... 539
Submodules of C(Y) x ... x C(Y). By B. Roth .................. 543
The compact operators are not complemented in L(H). By John B. Conway ... 549
Closed ideals in subalgebras of Banach algebras. I. By J. T. Burnham ........ 551

D. Geometry

On characterization of Riemannian manifolds by growth of tubular neighborhoods. By Nathaniel Grossman .................. 556
Riemann surfaces in complex projective spaces. By Bang-yen Chen and Gerald D. Ludden .................. 561

F. Statistics and Probability

The bold strategy in presence of house limit. By J. Ernest Wilkins, Jr. .... 567

G. Topology

An exact sequence calculation for the second homotopy of a knot. By M. A. Gutierrez .................. 571
A sufficient condition for countable-set aposyndesis. By Donald E. Bennett ... 578
Central measures on semisimple Lie groups have essentially compact support. By David L. Ragozin and Linda Preiss Rothschild .................. 585
Darboux’s theorem fails for weak symplectic forms. By J. Marsden ........ 590
Recurrence and almost periodicity in a generative transformation group. By Fred A. Roberson .................. 596
Skeleta of complexes with low $MU_5$ projective dimension. By David Copeland Johnson .................. 599
Maximal independent collections of closed sets. By Harvey Lee Baker, Jr. 605
$H$-structures on products. By Arthur H. Copeland, Jr. .................. 611
A note on $\mathcal{X}$-realcompactifications. By Anthony J. D’Aristotle .................. 615
An algebraic characterization of dimension. By M. J. Canfell .................. 619
Homotopical nilpotence of the seven sphere. By William J. Gilbert ........ 621
A remark on groups with the fixed point property. By Barry Simon .................. 623
Continuous functions from a connected locally connected space into a connected space with a dispersion point. By C. A. Coppin .................. 625
A note on homotopy equivalences. By R. M. Vogt .................. 627

Shorter Notes

A necessary condition for quasitriangularity. By James A. Deddens .................. 630
A normal subgroup of a semisimple Lie group is closed. By David L. Ragozin .................. 632
Erratum to Volume 28 .................. 634
AMS (MOS) Major Subject Headings .................. 635
Index to Volume 32 .................. 637
