ERRATUM TO VOLUME 27

Page 540, line 22, reads “... and \( h_2(t, k) \) in \( C^\omega(R) \) such that ...”. It should read

“... and \( h_2(t, k), h_1 \) in \( C^\omega([0, \infty)) \) and \( h_2 \) in \( C^\omega((-\infty, 4\lambda]) \) such that ...”.

ERRATUM TO VOLUME 31

The first statement of Theorem 2 in the above article is incorrect. In particular one can construct square matrices \( A \geq 0 \) having no zero rows or columns with the Moore-Penrose generalized inverse \( A^+ \geq 0 \), which is not diagonally equivalent to a doubly stochastic matrix. As an example take

\[
A = \begin{pmatrix}
1 & 1 & 0 \\
0 & 0 & 1 \\
0 & 0 & 1
\end{pmatrix}.
\]

Then \( A^+ = \frac{1}{3} A^T \), while \( A \) is clearly not diagonally equivalent to a doubly stochastic matrix. This item is not directly related to the main topic of the paper and the mistake affects no other results in the paper.

The authors wish to thank Professor D. J. Hartfiel for informing them of the error.
