Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics. The following statement was adopted by order of the Council of the American Mathematical Society on January 22, 1975.

Statement of Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

Blind Refereeing: Author's Responsibility

In January, 1975, the Council of the Society selected the Proceedings for a two-year experiment with "blind refereeing". Policy now in effect is that an author submitting a paper to the Proceedings shall send two manuscripts: one containing all pertinent personal data and the other not containing the author's name or institutional affiliation. This second copy will be refereed, and the Editor shall not reveal the name or institution of the author to the referee. It is not the responsibility of the Editor to suppress evidence internal to the paper, including the bibliography, from which the referee might determine the author's identity.

Authors are cautioned that the Editor may not initiate the refereeing process until two copies of the manuscript have been received from the author.

PUBLICATION CHARGES: The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

SUBSCRIPTION INFORMATION: Subscription prices for Volumes 54–61 (1976) are list $176.00, member $88.00. Back number prices per volume for Volumes 1–53 (1950–1975) are list $30.00, member $22.50.

BACKLOG: None. Papers currently being received by the editors will be published in 9–11 months.

MICROFILM EDITIONS: Back volumes of PROCEEDINGS are also available on 16 mm microfilm, either negative or positive, and may be mounted on spools or in Eastman or 3M cartridges. Volumes 1–46 (1950–1974) are mounted on 9 spools and cost $310.00 for spools or $337.00 for cartridges. Only current subscribers are eligible to purchase back volumes on microfilm.

THE PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions and orders for publications of the American Mathematical Society should be addressed to the American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Second class postage paid at Providence, Rhode Island, and additional mailing offices.

Printed in the United States of America
Preparation and Submission of Manuscript

1. Articles for insertion should be typewritten, double spaced, and no more than 11 pages (8½" x 11") long. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

3. Very short notes not to exceed 1 printed page are also accepted, and appear under the heading Shorter Notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940.

Galley Proof

When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the AMS (MOS) Subject Classification Scheme (1970) and describe the fields being handled by the editor.

CONTENTS—Continued from back cover

E. LOGIC AND FOUNDATIONS

Characterizing $C_3$ (the largest countable $\Pi^1_3$ set). By DAVID GUASPARI and LEO HARRINGTON ................................................................. 127

G. TOPOLOGY

Uniform distribution on locally compact groups. By HARALD RINDLER .......... 130
A remark on irreducible spaces. By J. C. SMITH ...................................... 133
On the problems of determining knots by their complements and knot complements by their groups. By JONATHAN SIMON ........................................... 140
A new proof of the Reidemeister-Singer theorem on stable equivalence of Heegaard splittings. By ROBERT CRAGGS .................................................. 143
On the density character of closed subgroups. By JOHN GINSBURG, M. RAJAGOPALAN, and VICTOR SAKS .......................................................... 148
On the cellularity of $\beta X - X$. By JOHN GINSBURG and R. GRANT WOODS .... 151
Central approximate units in a certain ideal of $L^1(G)$. By ERNST KOTZMANN and HARALD RINDLER ................................................................. 155
Locally compact subgroups of metrizable topological abelian groups. By R. C. HOOPER 159
The signature and arithmetic genus of certain aspherical manifolds. By F. THOMAS FARRELL ................................................................. 165
A note on the ergodic properties of homeomorphisms. By ROBERT SINE .......... 169
Small sets of homeomorphisms which control manifolds. NORMAN LEVITT .......... 173
Relating group topologies by their continuous points. By KEVIN J. SHARPE .......... 179
Countable paracompactness, normality, and Moore spaces. By MICHAEL L. WAGE ... 183
CONTENTS

Vol. 57, No. 1 MAY 1976 Whole No. 203

A. ALGEBRA AND NUMBER THEORY

Implicitly elementary integrals. By ROBERT H. RISCH .......... 1
Primitive ideals in group rings of polycyclic groups. By ROBERT L. SNIDER .......... 8
A sheaf representation of distributive pseudocomplemented lattices. By WILLIAM H. CORNISH .................................................. 11
Kernels in lattice-ordered groups. By RICHARD D. BYRD and JUSTIN T. LLOYD .... 16
On a problem of G. Grätzer. By TIBOR KATRINÁK ........................... 19
The largest proper variety of lattice ordered groups. By W. CHARLES HOLLAND ..... 25
Diophantine inequalities with mixed powers (mod 1). By R. J. COOK .................. 29
Artin root numbers for real characters. By JERRY GECHTER ......................... 35
Ext à la Yoneda without the Schanuel Lemma. By RUDOLF FRITSCH ............... 39
Lower Frattini series in finitely generated soluble groups. By JOHN C. LENNOX and JAMES WIEGOLD ............................................. 43
Partitions with congruence conditions. By M. M. ROBERTSON ...................... 45

B. ANALYSIS

Ergodic theorems of weak mixing type. By LEE K. JONES and MICHAEL LIN .......... 50
On functions with summable approximate Peano derivative. By CHENG-MING LEE .... 53
One dimensional perturbations of compact operators. By HARKRISHAN VASUDEVAN .. 58
The structure of regulated functions. By CASPER GOFFMAN, GADI MORAN and DANIEL WATERMAN .. ............................................. 61
A short proof of Schoenberg's theorem. By PAUL RESSEL .......................... 66
Sur les fonctions de deux variables dont les coupes sont des dérivées. By ZBIIGNIEW GRANDE .................................................. 69
On univalent polynomials. By J. R. QUINE ..................................... 75
Nonatomic Banach lattices can have $l_1$ as a dual space. By E. LACEY and P. WOJTASZCZYK .................................................. 79
Extreme operators in the unit ball of $L(C(X), C(Y))$ over the complex field. By ALAN GENDLER ..................................................... 85
A compactness condition for solutions of ordinary differential equations. By L. K. JACKSON ...................................................... 89
A Nagumo condition for ordinary differential equations. By L. K. JACKSON ........ 93
A characterization of $F^+ \cap N$. By M. STOLL .................................. 97
A class of spectral sets. By C. ROBERT WARNER .................................. 99
Solvability of convolution equations in $K_1$. By S. SZNAJDER and Z. ZIELEZNY .. 103
Subnormal shifts with operator-valued weights. By P. GHATAGE ...................... 107
A generalization of the Wiener-Lévy theorem applicable to some Volterra equations. By G. S. JORDAN and ROBERT L. WHEELER .......................... 109
A generalization of a theorem by Bochner. By DORTE OLESON ....................... 115
Strongly strictly cyclic weighted shifts. By JAMES H. HEDLUND .................... 119

D. GEOMETRY

A geometric inequality for plane curves with restricted curvature. By G. D. CHAKERIAN H. H. JOHNSON and A. VOGT ........................................... 122
