

ADDENDUM TO "THE INTERSECTION  
OF SYLOW SUBGROUPS"

AVINOAM MANN

The main result of the paper is not new, but appears as Corollary 2.5(i) in *Groups with normal solvable Hall  $p'$ -subgroups*, by D. S. Passman (Trans. Amer. Math. Soc. **123** (1966), 99–111). Indeed, Passman has sharper results. These results imply, e.g., the following statement: "In any finite solvable group there exist three nilpotent injectors,  $R$ ,  $S$  and  $T$ , such that  $R \cap S \cap T = F(G)$ ."
