Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics. The following statement was adopted by order of the Council of the American Mathematical Society on January 22, 1975.

Statement of Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading Shorter notes. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the Shorter Notes department.

Blind Refereeing: Author's Responsibility

In 1975 The Council of the Society selected the Proceedings for an experiment with “blind refereeing.” The policy now in effect is that an author submitting a paper to the Proceedings shall send two manuscripts: one containing all pertinent personal data and the other not containing the author’s name or institutional affiliation. This second copy will be refereed, and the Editor shall not reveal the name or institution of the author to the referee. It is not the responsibility of the Editor to suppress evidence internal to the paper, including the bibliography, from which the referee might determine the author’s identity.

Authors are cautioned that the Editor may not initiate the refereeing process until two copies of the manuscript have been received from the author.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 73–77 (1979) are $150.00 list; $75.00 member. Combination paper and microform (microfiche or microfilm) subscription prices are $200.00 list; $100.00 member. Microfiche of each issue will be mailed the fastest way before the camera copy is sent to the printer.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–53, $30.00 list, $22.50 member; for Volumes 54–67, $34.00 list, $25.50 member; for Volumes 68–72, $42.00 list, $31.50 member. Back volumes are also available on 16mm positive or negative microfilm. The microfilm may be mounted on spools or in Kodak or 3M cartridges. Only current subscribers are eligible to purchase back volumes on microfilm. Write to the AMS for a detailed price list.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Second class postage paid at Providence, Rhode Island, and additional mailing offices.

U. S. Postal Service Publication No. 445600.

Printed in the United States of America
Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 11 (8½" × 11") pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) subject classification numbers representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. See page 109 of the February 1978 NOTICES of the American Mathematical Society for a statement concerning copyright policy. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

---

REPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

BACKLOG. None. Papers currently being received by the editors will be published in 9–11 months.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the AMS (MOS) Subject Classification Scheme (1970) and describe the fields being handled by the editor.

CONTENTS

Vol. 73, No. 2  February 1979  Whole No. 236

A. ALGEBRA AND NUMBER THEORY

On Baker's finite basis theorem for congruence distributive varieties.  By STANLEY BURRIS ................................................................. 141
Tensor product of commutative unions of groups.  By JAMES A. ANDERSON and NAOKI KIMURA ................................................................. 149
On the successive derived sets of the Pisot numbers.  By DAVID W. BOYD .......... 154
Products of reflections in the unitary group.  By DRAGOMIR Ž. DJOKOVIĆ and JERRY MALZAN ................................................................. 157
Karoubi-Villamayor $K$-theory is not homotopy Quillen theory.  By JAN R. STROOKER 161
Two applications of change of rings theorems for Poincaré-series.  By JÜRGEN HER-
ZOG and MANFRED STEURICH .......................................................... 163
Recursive determination of the sum-of-divisors function.  By JOHN A. EWELL ....... 169

B. ANALYSIS

Expansions associated with non-self-adjoint boundary-value problems.  By ROBERT CARLSON ................................................................. 173
On a theorem of Duren, Shapiro and Shields.  By SHINJI YAMASHITA ............... 180
On univalent functions convex in one direction.  By A. W. GOODMAN and E. B. SAFF .. 183
On Weyl fractional calculus.  By R. K. RAINA and C. L. KOUL .......................... 188
On the existence of fundamental solutions of certain boundary value problems.  By R. S. PATHAK .............................................................. 193
A note on generating relations for Lauricella's function of several variables.  By D. P. SHUKLA ................................................................. 199
Some remarks on the sequences of exhaustive measures and uniform boundedness of measures.  By SURJIT SINGH KHURANA ............................... 207
Minimal primitive ideals of GCR $C^*$-algebras.  By PHILIP GREEN .................... 209
On the existence of maximal and minimal solutions for parabolic partial differential equations.  By J. W. BEBERNES and K. SCHMITT ................. 211
On the commutative properties of boundary integral operators.  By G. F. ROACH .... 219

D. GEOMETRY

Recession cones of nonconvex sets and increasing functions.  By GERALD BEER ........ 228
A Helly-type theorem for the dimension of the kernel of a starshaped set.  By MARILYN BRENN ................................................................. 233
On subvarieties of a Hermitian manifold.  By CARLOS J. FERRARIS ..................... 237

G. TOPOLOGY

Paracompactness, metacompactness and semi-open covers.  By HEIKKI J. K. JUNNILA 244
Unsmoothable diffeomorphisms on higher dimensional manifolds.  By JENNY HARRISON ... 249
Compactification of a convergence space.  By VINODKUMAR .............................. 256
Isogeny restrictions of irreducible admissible representations are finite direct sums of irreducible admissible representations.  By ALLAN J. SILBERGER ....... 263
Equivalence and slice theory for symplectic forms on closed manifolds.  By R.C. SWAN-
SON and C. C. CHICONE ................................................................. 265
Crystallisations of 2-fold branched coverings of $S^3$.  By MASSIMO FERRI ............. 271

SHORTER NOTES

A short proof of a version of Asplund's norm averaging theorem.  By K. JOHN and V. ZIZLER ............................................................................. 277
ANR's admitting an interval factor are $Q$-manifolds.  By TERRY L. LAY and JOHN J.
WALSH ....................................................................................... 279
A generalization of a theorem of S. Picard.  By WOLFGANG SANDER ................. 281
