Proceedings of the American Mathematical Society
This journal is devoted entirely to research in pure
and applied mathematics.

Editorial Policy

1. On January 22, 1975, the Council of the American Mathematical Society voted:

"To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

"Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department."

2. On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

Subscription Information. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 78–80 (1980) are $150.00 list; $75.00 member. Combination paper and microform (microfiche or microfilm) subscription prices are $200.00 list; $100.00 member. Microfiche of each issue will be mailed the fastest way before the camera copy is sent to the printer.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–53, $30.00 list, $22.50 member; for Volumes 54–67, $34.00 list, $25.50 member; for Volumes 68–72, $42.00 list, $31.50 member; for Volumes 73–77, $45.00 list, $33.75 member. Back volumes are also available on 16mm positive or negative microfilm. The microfilm may be mounted on spools or in Kodak or 3M cartridges. Only current subscribers are eligible to purchase back volumes on microfilm. Write to the AMS for a detailed price list.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

PROCEEDINGS of the American Mathematical Society (USPS 445600) is published monthly by the American Mathematical Society at the address below. Second-class postage is paid at Providence, Rhode Island, and additional mailing offices. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, RI 02940

Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 11 (8½" x 11") pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The 1980 Mathematics Subject Classification with instructions for its use can be found in the 1978 Subject Index to Mathematical Reviews.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

REPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $40.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the Notices of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

BACKLOG. 100 pages. Papers currently being received by the editors will be published in 10–12 months.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the 1980 Mathematics Subject Classification and describe the fields being handled by the editor.

LOGIC AND FOUNDATIONS (03 04)
Thomas J. Jech, Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802

COPYING AND REPRINTING

Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner’s consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale.
## CONTENTS

### A. ALGEBRA AND NUMBER THEORY

- One-variable equational compactness in partially distributive semilattices with pseudocomplementation. By SYDNEY BULMAN-FLEMING and ISIDORE FLEISCHER .................................................. 505
- A comparison of Chehata's and Clifford's ordinally simple ordered groups. By TODD FEIL .................................................. 512
- Goldie conditions in finite normalizing extensions. By CHARLES LANSKI .................................................. 515
- Subgroups of $ax + b$ and the splitting of triangular group schemes. By WILLIAM C. WATERHOUSE .................................................. 520
- The Greenspan bound for the order of differential systems. By RICHARD M. COHN .................................................. 523
- Frobenius extensions of $QF$-3 rings. By YOSHIMI KITAMURA .................................................. 527
- Conformal transformations and Clifford algebras. By PERTTI LOUNESTO and ESKO LATVAMAA .................................................. 533

### B. ANALYSIS

- Algebras with unconditional orthogonal bases. By TAQDIR HUSAIN and SALEEM WATSON .................................................. 539
- Local algebraicity of some analytic hypersurfaces. By WILLIAM A. ADKINS .................................................. 546
- A construction of ergodic BMO functions. By KARL PETERSEN .................................................. 549
- Convex domains and Kobayashi hyperbolicity. By THEODORE J. BARTH .................................................. 556
- Approximating maps and a Stone-Weierstrass theorem for $C^*$-algebras. By JOHN W. BUNCE .................................................. 559
- A measure-theoretic proof of the Stone-Weierstrass approximation theorem. By SURJIT SINGH KHURANA .................................................. 564
- On the integrability of the maximal ergodic function. By NGHIỆM Đặng-NgOC .................................................. 565
- On dominated extensions in function algebras. By J. GLOBEVIK .................................................. 571
- On the boundary of reduced Teichmüller space. By JUDITH C. WASON .................................................. 577
- Quotients of $C^0 \setminus \{0\}$ by diagonal $C^*$-actions. By KUNIO TAKIJIMA .................................................. 581
- A remark on the F. and M. Riesz theorem. By LOUIS PIGNO and BRENT SMITH .................................................. 585
- On a certain $C^*$-crossed product inside a $W^*$-crossed product. By DORTE OLESEN and GERT K. PEDERSEN .................................................. 587
- A characterization of the range of a bounded linear transformation in Hilbert space. By GEORGE O. GOLIGHTLY .................................................. 591
- Normality can be relaxed in the asymptotic Fugled-Putnam theorem. By TAKAYUKI FURUTA .................................................. 593
- The Zygmund condition for Bloch functions in the ball in $C^n$. By JOSEPH A. CIMA and BARNET M. WEINSTOCK .................................................. 597
- A remark on complemented subspaces of unitary matrix spaces. By JONATHAN ARAZY .................................................. 601
- The equality of unilateral derivatives. By M. J. EVANS and P. D. HUMKE .................................................. 609

### D. GEOMETRY

- A normal form for a special class of curvature operators. By STANLEY M. ZOLTEK .................................................. 614
- Slicing convex bodies—Bounds for slice area in terms of the body's covariance. By DOUGLAS HENSLEY .................................................. 619

### E. LOGIC AND FOUNDATIONS

- The existence of $g$-sets is equivalent to the existence of strong $Q$-sets. By TEODOR C. PRZYMUŚIŃSKI .................................................. 626
- Decomposition of recursively enumerable degrees. By A. H. LACHLAN .................................................. 629
- Ultraproduct invariant logics. By J. SGRO .................................................. 635

### G. TOPOLOGY

- Relations among characteristic classes of $n$-manifolds imbedded in $R^{n+k}$. By STAVROS PAPASTAVRIDIS .................................................. 639
- On the distribution of Alexander polynomials of alternating knots and links. By SHIN'TICHI KINOSHITA .................................................. 644
- Planar polynomial foliations. By STEPHEN SCHECTER and MICHAEL F. SINGER .................................................. 649
- Having a small weight is determined by the small subspaces. By A. HAJNAL and I. JUHÁSZ .................................................. 657

Index to Volume 79 .................................................. 659
