Proceedings of the American Mathematical Society
This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

1. On January 22, 1975, the Council of the American Mathematical Society voted:
   "To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 11 typed pages.

   "Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department."

2. On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

   Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

Subscription Information. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 90–92 (1984) are $250.00 list; $125.00 member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $10.00; subscribers in India must pay a postage surcharge of $28.00. Combination paper and microfiche subscription prices are $333.00 list; $167.00 member. Microfiche of each issue will be mailed the fastest way possible before the issue is mailed by the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

Back Number Information. Back number prices per volume are: for Volumes 1–89, $110.00 list, $83.00 member. Back volumes may be purchased on microfilm or microfiche from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940.

Proceedings of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904.
Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940.

Information on Copying and Reprinting can be found at the back of this journal.
Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 11 (8½” × 11”) pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. The 1980 Mathematics Subject Classification with instructions for its use can be found in the 1978 Subject Index to Mathematical Reviews.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

REPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

PUBLICATION CHARGES. The research journals of the American Mathematical Society carry a page charge of $50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author’s paper for publication dependent upon payment of the page charge.

BACKLOG. 50 pages. Papers currently being received by the editors will be published in 9–11 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner’s consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classifications from the 1980 Mathematics Subject Classification and describe the fields being handled by the editor.

LOGIC AND FOUNDATIONS (03 04)
Thomas J. Jech, Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802

COMBINATORICS AND DISCRETE MATHEMATICS (05 15)
Thomas H. Brylawski, Department of Mathematics, University of North Carolina, Chapel Hill, North Carolina 27514

COMMUTATIVE ALGEBRA (06 12 13 14 15 18)
William C. Waterhouse, Department of Mathematics, Pennsylvania State University, University Park, Pennsylvania 16802

GENERAL ALGEBRA (16 17 18 08)
Donald Passman, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

GROUP THEORY (20)
Bhama Srinivasan, Department of Mathematics, University of Illinois, Chicago, Illinois 60680

ALGEBRAIC AND DIFFERENTIAL TOPOLOGY (55 57 58)
Haynes R. Miller, Department of Mathematics, University of Washington, Seattle, Washington 98195

REAL VARIABLES (26 28 40)
J. Jerry Uhl, Jr., Department of Mathematics, University of Illinois, Urbana, Illinois 61801

COMPLEX VARIABLES (30 31 32)
Irwin Kra, Department of Mathematics, State University of New York at Stony Brook, Stony Brook, New York 11794

NUMBER THEORY (10)
Larry J. Goldstein, Department of Mathematics, University of Maryland, College Park, Maryland 20742

ORDINARY DIFFERENTIAL EQUATIONS AND DYNAMICAL SYSTEMS (33 34 39 49 58)
George R. Sell, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

PARTIAL DIFFERENTIAL EQUATIONS (35 49)
Walter Littman, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

GENERAL ANALYSIS (41 42 43 44 45)
Richard R. Goldberg, Department of Mathematics, Vanderbilt University, Nashville, Tennessee 37235

FUNCTIONAL ANALYSIS AND OPERATOR THEORY (46 47)
Catherine L. Olsen, Department of Mathematics, State University of New York at Buffalo, Buffalo, New York 14214

FUNCTIONAL ANALYSIS AND CONVEXITY (46 52)
William J. Davis, Department of Mathematics, Ohio State University, Columbus, Ohio 43210

COMPLEX VARIABLES, FUNCTIONAL ANALYSIS AND OPERATOR THEORY (30 46 47)
Paul S. Muhly, Department of Mathematics, University of Iowa, Iowa City, Iowa 52242

LIE GROUPS AND GEOMETRY (22 51 53)
David G. Ebin, Department of Mathematics, University of California, Los Angeles, California 90024

GENERAL TOPOLOGY (54)
Dennis Burke, Department of Mathematics, Miami University of Ohio, Oxford, Ohio 45056
Doug W. Curtis, Department of Mathematics, Louisiana State University, Baton Rouge, Louisiana 70803

PROBABILITY AND CERTAIN OTHER FIELDS (60–99 inclusive)
Bert E. Fristedt, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455
Daniel W. Stroock, University of Colorado, Box 426, Boulder, Colorado 80309

All other communications should be addressed to the Managing Editor, Richard R. Goldberg, at the above address.

CONTENTS—Continued from back cover

Minimax theorems for ANR’s. By J. F. McClendon ......................................................... 149
Almost-quaternion $(M - 1)$-substructures on $S^{4M-3}$. By Turgut Önder .......................... 155
Resolving acyclic images of nonorientable three-manifolds. By Dušan Repovš and
R. C. Lacher ........................................................................................................ 157
Virtual permutations of $Z[Z^m]$ complexes. By Michael Maller and Jennifer Whitehead 162
Orientable products in $N$. By Howard Osborn .............................................................. 167

SHORTER NOTES

An elementary proof of the Russo-Dye theorem. By L. Terrell Gardner ......................... 171

ERRATA

Erratum to “A simple proof of the extension theorem of sequences of divided powers in
characteristic $p$”. By Mitsuhiro Takeuchi ................................................................. 172
CONTENTS

Vol. 90, No. 1 January 1984 Whole No. 295

A. ALGEBRA AND NUMBER THEORY

Gelfand-Kirillov dimension of rings of formal differential operators on affine varieties. By S. P. Smith ......................................................... 1
Lie ideals and Jordan derivations of prime rings. By Ram Awtar ................................................................. 9
Terminal quotient singularities in dimensions three and four. By David R. Morrison and Glenn Stevens .................. 15
On Sylow intersections in finite groups. By Geoffrey R. Robinson ................................................................. 21
On the derivation of $x^n$ in a ring. By Douglas Bridges and Jeffrey Bergen .................................. 25
On Noetherianness of Nash rings. By Fulvio Mora and Mario Raimondo ......................................................... 30
Quotient groups of finite groups. By Pamela A. Ferguson .............................................................................. 35
Relative Barr-Rinehart and cotriple cohomology groups are isomorphic. By D. H. Van Osdol ......................... 40
Mullin's sequence of primes is not monotonic. By Thorkil Naur ........................................................................ 43
Co-well-powered reflective subcategories. By Rudolf-E. Hoffmann ................................................................. 45

B. ANALYSIS

On the generalized potential problem for a surface of revolution. By V. I. Fabrikant, T. S. Sankar and M. N. S. Swamy ......................................................... 47
Tales about tails. By Haakon Waadeland ........................................................................................................ 57
Oscillation theorems for nth order nonlinear differential equations with deviating arguments. By S. R. Grace and B. S. Lalli ................................................................. 65
Weighted group algebra as an ideal in its second dual space. By F. Ghahramani .............................................. 71
On a problem of Erdős on sequences and measurable sets. By K. J. Falconer .................................................. 77
Tarski's extension theorem for group-valued charges. By Vincenzo Aversa and K. P. S. Bhaskara Rao ................................................................. 79
A stronger metric for closed operators in Hilbert space. By William E. Kaufman ........................................ 83
A test for holomorphy in the unit ball of $C^n$. By Carlos A. Berenstein ......................................................... 88
Analyticity preserving properties of resolvents for degenerate diffusion operators in one dimension. By Masaaki Tsuchiya ......................................................... 91
A remark on the Hardy-Littlewood inequality. By John R. McMullen and Bernice Sharp ......................................................... 95

D. GEOMETRY

Killing vector fields and holonomy algebras. By Carlos Currás-Bosch ......................................................... 97

E. LOGIC AND FOUNDATIONS

A technique for proving uniformity. By Howard Becker .............................................................................. 103

F. STATISTICS AND PROBABILITY

Reversing the Berry-Esseen inequality. By Peter Hall and A. D. Barbour ......................................................... 107

G. TOPOLOGY

A fixed point theorem for simplicial complexes whose fundamental groups are free products. By Frank Raymond ......................................................... 111
Property C and fine homotopy equivalences. By Jan van Mill and Jerzy Mogilski ........................................ 118
On countable compactness and sequential compactness. By Zhou Hao-Xuan .................................................. 121
A generalization of Altman's ordering principle. By Mihai Turinici ................................................................. 128
The equivalence of zero span and zero semispan. By James Francis Davis ......................................................... 133
Embedding phenomena based upon decomposition theory: Locally spherical but wild co-dimension one spheres. By Robert J. Daverman ......................................................... 139
The Gelfand subalgebra of real or nonarchimedean valued continuous functions. By Jesus M. Dominguez ......................................................... 145
