Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Editorial Policy

To be published in the Proceedings, a paper must be correct, new, nontrivial and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors shall solicit, and encourage publication of, worthy papers of length not exceeding 15 typed pages.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

On January 23, 1979, the Council of the American Mathematical Society abolished blind refereeing as a policy for the Proceedings, but decided that any author who so requests and who provides a blind copy of a manuscript will have the manuscript refereed blind.

Two copies of a manuscript should be submitted. If blind refereeing is intended, one should be complete and one blind, and then the latter will be sent to the referee without disclosure of the author's name or institution.

SUBSCRIPTION INFORMATION. PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscription prices for Volumes 108–110 (1990) are $432 list; $346 institutional member; $259 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25: subscribers in India must pay a postage surcharge of $38. Expedited delivery to destinations in North America—$30; elsewhere—$67. Combination paper and microfiche subscription prices are $575 list; $460 institutional member. Microfiche of each issue will be mailed the fastest way possible before the camera copy is sent to the printer. Microfilm subscriptions may be purchased from University Microfilms International, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

BACK NUMBER INFORMATION. Back number prices per volume are for Volumes 1–89, $117 list, $93 institutional; for Volumes 90–92, $134 list; $107 institutional member; for Volumes 93–95, $179 list; $143 institutional member; for Volumes 96–98, $198 list; $158 institutional members; for Volumes 99–104, $209 list; $168 institutional member; for Volumes 105–107, $214 list; $171 institutional member.

Subscriptions and orders for publications of the American Mathematical Society should be addressed to American Mathematical Society, P. O. Box 1571, Annex Station, Providence, R. I. 02901-1571. All orders must be accompanied by payment. Other correspondence should be addressed to P. O. Box 6248, Providence, R. I. 02940-6248.

PROCEEDINGS of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, R. I. 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to PROCEEDINGS, American Mathematical Society, P. O. Box 6248, Providence, R. I. 02940-6248.

Printed in the United States of America

Information on Copying and Reprinting can be found at the back of this journal.

The paper used in this journal is acid-free and falls within the guidelines established to ensure permanence and durability. ☞

This publication was typeset using $\LaTeX$, the American Mathematical Society's $\TeX$ macro system.
Manuscript Information

1. Articles submitted for publication should be typewritten, double spaced, and no more than 15 (8½" × 11") pages long. The Manual for Authors, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet. Authors must keep complete copies of their manuscripts, and editors will acknowledge receipt. To encourage the submission of manuscripts in electronic form using TEx and the AMSTeX macro package, the Executive Committee of the Council has adopted a policy that allows for accelerating the publication date of such manuscripts by as much as 20 weeks, which is approximately equal to the time normally needed by the Society for copyediting, typesetting, and proofreading an average manuscript.

2. The first page should consist of a descriptive title, followed by an abstract which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the 1980 Mathematics Subject Classification (1985 Revision) representing the primary and secondary subjects of the article. This may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual subject index of Mathematical Reviews, published with the December issue starting in 1984.

3. A Copyright Transfer Agreement is required before a paper will be published in the Proceedings. A copy of the form is sent with the acknowledgement of receipt of manuscript from the Providence office of the Society. Authors are urged to return the forms immediately to prevent delays in processing and publishing of the manuscript.

OFFPRINTS AND ADDRESS CHANGES. Any inquiries concerning a paper which has been accepted for publication, including information regarding offprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate on the original manuscript which of them should receive galley proof in the event that the manuscript is accepted for publication.

BACKLOG. 150 pages. Papers currently being accepted by the editors will be published in 12–14 months.

COPYING AND REPRINTING. Individual readers of this publication, and nonprofit libraries acting for them are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that the fee of $1.00 plus $.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 27 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.
Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper. The numbers in parentheses are the first two digits of major classification from the 1980 Mathematics Subject Classification (1985 Revision) and describe the fields being handled by the editor.

**LOGIC AND FOUNDATIONS (03 04)**

Yet another proof of the Lyapunov convexity theorem.  By Zvi Artstein ....... 89
Relatively open mappings.  By Woo Young Lee ................................ 93
Compact weighted composition operators on Banach lattices.  By William Feldman .... 95
Inverse \ast-semigroups \ast-generated by families of isometries.  By Wacław Szymanski ... 101
Positive solutions of difference equations.  By Ch. G. Philos and Y. G. Sficas .. 107
Conjugate convex functions and the epi-distance topology.  By Gerald Beer ..... 117
Projections, the weighted Bergman spaces, and the Bloch space.  By Boo Rim Choe .... 127
Stable rank of subalgebras of the disc algebra.  By Rudolf Rupp ............. 137
A simple example of a normal operator T on a Banach space such that r(T) < ∥T∥.  
By Muneo Chô and Hiroyasu Yamaguchi ........................................... 143
On twisted Fréchet and (LB)-spaces.  By G. Metafune and V. B. Moscatelli ... 145
The death of an index theorem.  By Manuel Gonzales and Robin Harte ......... 151
Iterated fine limits.  By Kohur Gowrisankaran .................................. 157
Classification of skew symmetric matrices.  By Berndt Brenken .............. 163
Dieudonné-Schwartz theorem in inductive limits of metrizable spaces II.  
By Qu Jing Hui ..................................................... 171
Mixed and directional derivatives.  By W. Chen and Z. Ditzian .................. 177
On a problem of G. G. Lorentz regarding the norms of Fourier projections.  
By Boris Shekhtman .................................................. 187
A note on Fréchet-Montel spaces.  By Mikael Lindström ....................... 191

D. GEOMETRY

Gaussian curvatures of Lorentzian metrics on the plane and punctured planes.  
By Jiangfan Li ...................................................... 197
Generic properties of compact starshaped sets.  
By Peter M. Gruber and Tudor I. Zamfirescu ..................................... 207
Conformal circles and parametrizations of curves in conformal manifolds.  
By T. N. Bailey and M. G. Eastwood ....................................... 215
E. LOGIC AND FOUNDATIONS
On extensions of models of strong fragments of arithmetic. By Roman Kossak 223

F. STATISTICS AND PROBABILITY
Bounds on the expectation of functions of martingales and sums of positive RV's in terms of norms of sums of independent random variables. By Victor H. de la Peña 233

G. TOPOLOGY
Two classes of Fréchet-Urysohn spaces. By Alan Dow 241
On the cohomological dimension of the localization functor. By Henryk Hecht and Dragana Miličić 249
An easy example of a 0-space not almost rimcompact. By Beverly Diamond 255
A simple construction of Stein's complementary series representations. By Siddhartha Sahi 257
The nonexistence of expansive homeomorphisms on 1-dimensional compact ANRs. By Hisao Kato 267
Chaotic numerics from an integrable Hamiltonian system. By Kevin Hockett 271

SHORTER NOTES
Two-dimensional representations of groups with property FA. By Roger C. Alperin 283
Note on “The logically simplest form of the infinity axiom”. By Franco Parlamento and Alberto Policriti 285

Vol. 108, No. 2 February 1990 Whole No. 368

A. ALGEBRA AND NUMBER THEORY
On automorphisms of free pro-p-groups I. By Wolfgang N. Herfort and Luis Ribes 287
Splitting theorem for homology of GL(R). By Stanislaw Betley 297
Consecutive units. By Morris Newman 303
Multiplicative functions on arithmetic progressions. By Adolf Hildebrand 307
Zeros of differentials along one-fibered ideals. By R. Fedder, C. Huneke, and R. Hübl 319
Integral group rings with trivial central units. By Jürgen Ritter and Sudarshan K. Sehgal 327
Generating functions for the numbers of abelian extensions of a local field. By Artur Travesa 331

B. ANALYSIS
Nevanlinna-Pick interpolation on Sobolev space. By Jim Agler 341
Complete monotonicity of modified Bessel functions. By Mourad E. H. Ismail 353
Embedding subspaces of $L_1$ into $l_1^n$. By Michel Talagrand 363
A measure which is singular and uniformly locally uniform. By David Freedman and Jim Pitman 371
A note on Tong paper: The asymptotic behavior of a class of nonlinear differential equations of second order. By Fan Wei Meng 383
Monotonicity in terms of order of the zeros of the derivatives of Bessel functions. By Lee Lorch 387
Differentiable restrictions of real functions. By Jack B. Brown 391
Characterizations of Tauberian operators and other semigroups of operators. By M. Gonzalez and V. M. Onieva 399
A remark on a paper by C. Fefferman. By Filippo Chiarenza and Michele Frasca 407
Wiener transformation on functions with bounded averages. By Yong-Zhuo Chen and Ka-Sing Lau 411
Real analytic boundary regularity of the Cauchy kernel on convex domains.
By SO-CHIN CHEN ............................................................. 423

Almost everywhere convergence of Vilenkin-Fourier series of $H^1$ functions.
By WO-SANG YOUNG ............................................................ 433

Compact composition operators on $L^1$. By JOEL H. SHAPIRO and CARL SUNDBERG .... 443
On two function spaces which are similar to $L_0$. By S. J. DILWORTH and D. A. TRAUTMAN 451
Harmonic functions having no tangential limits. By HIROAKI AKAWA ............................. 457
$L^{\infty}$-BMO boundedness for a singular integral operator. By JAVAD NAMAZI .......... 465
Functional representation of vector lattices. By ISIDORE FLEISCHER ......................... 471
On the modulus of cone absolutely summing operators and vector measures of bounded variation. By BORIS LAVRIĆ ............................................. 479

D. GEOMETRY
A characterization of compact surfaces with constant mean curvature.
By MASAHIKU UMEMURA ................................................... 483
A remark on the Gromov convergence theorem. By YUKIO OTSU .................................. 491
On asymptotic behavior of the mass of rays. By TAKASHI SHIOYA .............................. 495

E. LOGIC AND FOUNDATIONS
On Sierpinski sets. By TOMEK BARTOSZYNSKI and HAIM JUDAH ................................. 507

G. TOPOLOGY
Paracompact product spaces defined by ultrafilters over the index set.
By L. BRIAN LAWRENCE .................................................... 513
On the harmonic maps from $R^2$ into $H^2$. By JUN-MIN LIN .................................. 521
A characterization of smooth Cantor bouquets. By Witold D. BULA and
LEX G. OVERSTEEGEN ..................................................... 529
Some properties of $K$-semistratifiable spaces. By T. MIZOKAMI ............................... 535
Minimal compactifications and their associated function spaces. By GARY D. FAULKNER 541
A function space triple of a compact polyhedron into an open set in Euclidean space.
By KATSURO SAKAI ......................................................... 547
Tychonoff reflection in products and the $\omega$-topology on function spaces.
By STEPHEN WATSON ....................................................... 557

H. COMBINATORICS
Finite projective planes and a question about primes. By WALTER FEIT .................... 561

SHORTER NOTES
On common fixed points of linear contractions. By ZOLTÁN SASVÁRI ......................... 565
Groups with cyclic derived factor-group. By HERMANN HEINEKEN, JOHN C. LENNOX,
A. G. R. STEWART, and JAMES WIEGOLD .................................. 567
Dirichlet-finite analytic and harmonic functions are BMO. By J. L. SCHIFF ................ 569
Erratum. By J. MARSHALL ASH ........................................... 571
A note on the number of primes in short intervals.  By D. A. Goldston and S. M. Gonek 613
A note on the quaternion group as Galois group.  By Roger Ware .......................... 621
The symmetry of the Weierstrass generalized semigroups and affine embeddings.
By Felix Delgado .................................................. 627
A remark on finitely presented infinite dimensional algebras.  By Gilbert Baumslag and
Peter B. Shalen ................................................. 633
Defining Bernoulli polynomials in $\mathbb{Z}/p\mathbb{Z}$ (a generic regularity condition).
By Andrew Granville and H. S. Shank ........................................... 637
On the surjectivity criterion for Buchsbaum modules.  By Shiro Goto ........................... 641
On compositions of derivations of prime rings.  By Chen-Lian Chuang .......................... 647
The semisimplicity problem for $p$-adic group algebras.  By Kathryn E. Hare and
Maziar Shirvani .................................................. 653
Relative Lie algebra cohomology revisited.  By Mark Muzere ................................. 665
The ring of integer-valued polynomials of a Dedekind domain.  By Robert Gilmer,
William Heinzer, David Lantz, and William Smith ........................................... 673

B. ANALYSIS
A characterization of the Mackey topology $\tau(L^\infty, L^1)$.  By Marian Nowak ........... 683
A general chain rule for distributional derivatives.  By L. Ambrosio and G. Dal Maso 691
On induced covariant systems.  By Siegfried Echterhoff ........................................ 703
A generalization of Brendsted's results and its applications.  By Noriko Mizoguchi .... 707
Norms of Hankel operators on a bidisc.  By Takahiko Nakazi .................................. 715
Closure of invertible operators on a Hilbert space.  By Richard Bouldin ........................ 721
Fixed point theorems in product spaces.  By Tadeusz Kuczumow .................................. 727
Sequences in the maximal ideal space of $H^\infty$.  By Sheldon Axler and Pamela Gorkin
Convergence of difference approximations and nonlinear semigroups.  By Shigeo Kanda ... 741
On nilpotent groups of automorphisms of Klein surfaces.  By Emilio Bujalance and
Grzegorz Gromadzki ............................................. 749
A problem in electrical prospection and a $n$-dimensional Borg-Levinson theorem.
By Sagun Chanillo .................................................. 761
_locally bounded noncontinuous linear forms on strong duals of nondistinguished Köthe
_echelon spaces.  By Françoise Bastin and José Bonet ........................................... 769
The parameters of a chain sequence.  By T. S. Chihara .......................................... 775
Mean ergodic theorems for nonlinear operators.  By Rainer Wittmann ........................... 781
On unitary invariant ideals in the algebra of compact operators.  By József V. Varga ... 789

C. APPLIED MATHEMATICS
The Matheron representation theorem for gray-scale morphological filters.  By G. Crombez 795
On clustering in central configurations.  By Gregory Buck ........................................ 801

D. GEOMETRY
On totally geodesic spheres in Grassmannians and $O(n)$.  By Qi-Ming Wang ................... 811
Starshaped unions and nonempty intersections of convex sets in $R^d$.  By Marilyn Breen ... 817
A Trüdinger inequality on surfaces with conical singularities.  By Wenxiong Chen ................ 821

E. LOGIC AND FOUNDATIONS
Sequences of reals to sequences of zeros and ones.  By Steven Kalikow ......................... 833

F. STATISTICS AND PROBABILITY
A finite-energy bound on the approach of a diffusion to the zeros of its density.
By Timothy C. Wallstrom ........................................... 839

G. TOPOLOGY
$10_{101}$ has no period 7: a criterion for periodic links.  By Paweł Traczyk .................... 845
Fixed points of unitary $\mathbb{Z}/p^n$-manifolds.  By Stefan Waner and Yihren Wu ... .... 847
Analogues of Treybig's product theorem.  By H. Murat Tuncali ................................... 855
A. ALGEBRA AND NUMBER THEORY

Semiderivations of prime rings. By Matej Brešar ........................................ 859
On rational reciprocity. By Charles Helou ..................................................... 861
On the structure of semiderivations in prime rings. By Chen-Lian Chuang ......... 867
Algebraic elements in group rings. By I.B.S. Passi and D. S. Passman ............. 871
The Schur product theorem in the block case. By D. Choudhury ...................... 879

B. ANALYSIS

A totally real three-sphere in \( C^3 \) bounding a family of analytic disks.
By Franc Forstnerič ................................................................. 887
Two generalizations of Titchmarsh’s convolution theorem. By Raouf Doss ........ 893
On dual Banach algebras. By Pak-Ken Wong .................................................. 899
Daugavet’s equation and orthomorphisms. By Klaus D. Schmidt ...................... 905
A uniqueness condition for finite measures. By J. E. Nymann ....................... 913
The Hausdorff dimension of the graphs of continuous self-affine functions.
By M. Urbański .............................................................. 921
Invariant subspace of strictly singular operators. By Ruan Ji-Shou ............... 931
A generalization of a theorem of J. Holub. By Yuri Abramovich .................... 937
The \( C^* \)-algebras of Reeb foliations are not AF-embeddable. By Thierry Fack and
Xiaolu Wang .............................................................. 941
The hereditary Dunford–Pettis property for \( l_1(F) \). By Pilar Cembranos .......... 947
A nonzero complex sequence with vanishing power-sums. By Andrew Lenard ....... 951

D. GEOMETRY

Liapunov’s and related theorems. By Daniel Wulbert ................................. 955
Neumann eigenvalue estimate on a compact Riemannian manifold. By Roger Chen ...... 961
Kähler structures on compact solvmanifolds. By Chal Benson and Carolyn S. Gordon 971
Some rigidity phenomena for Einstein metrics. By Zhongmin Shen .................. 981
Minimal surfaces with low index in the three-dimensional sphere. By Francisco Urbano 989
A new family of Enneper type minimal surfaces. By Yi Fang ........................ 993

F. STATISTICS AND PROBABILITY

Nonmetric compact spaces and nonmeasurable processes. By R. M. Dudley ....... 1001
The semimartingale structure of reflecting Brownian motion. By Richard F. Bass and
Pei Hsu .............................................................. 1007

G. TOPOLOGY

Cell-like maps that are shape equivalences. By Jung-In K. Choi .................. 1011
Products of infinite-dimensional spaces. By Dale M. Rohm .......................... 1019
The topological entropy of homeomorphisms on one-dimensional continua.
By Gerald T. Seidler ................................................... 1025
On the Morava \( K \)-theories of \( SO(2n + 1) \). By Vidhyanath K. Rao ........... 1031
Global \( C^* \) structural stability of vector fields on open surfaces with finite genus.
By Janina Kotus ...................................................... 1039
Seifert fibered surgery manifolds of composite knots. By John Kalliongis and
Chichen M. Tsau .................................................. 1047
Ribbon concordance does not imply a degree one map. By Katura Miyazaki ....... 1055
Simply cyclic homogeneous non-tree-like curves decompose to solenoids.
By James T. Rogers, Jr. .................................................. 1059
Higher \( p \)-torsion in the \( \beta \)-family. By Hal Sadofsky ......................... 1063
Computability, homotopy, and twisted Cartesian products. By Kathryn Weld ....... 1073
A noncompletely regular quiet quasi-uniformity. By P. Fletcher, J. Hejcman, and
W. Hunsaker .................................................. 1077
A remark on \( \lambda_{2n-2} \). By Burton Randol ........................................ 1081
Compact and compactly generated subgroups of locally compact groups. By R. W. Bagley, T. S. Wu, and J. S. Yang ................................................................. 1085
Hodge theory of singular algebraic curves. By Masayoshi Nagase ......... 1095
Congruence and dimension of non-separable metric spaces. By Yasunao Hattori .... 1103
On a characterization of trees. By Witold D. Bula and E. D. Tymchatyn .... 1107
On the fixed point index of iterates of planar homeomorphisms. By Morton Brown . 1109
Countable paracompactness of Pixley–Roy hyperspaces. By Hidenori Tanaka .... 1115
A note on equivariant eta invariants. By Zhang Weiping .................................. 1121
The Corwin–Greenleaf parity result fails for completely solvable Lie groups.
By Ronald L. Lipsman .............................................................. 1131

H. COMBINATORICS
Unimodal polynomials arising from symmetric functions. By Francesco Brenti ...... 1133

SHORTER NOTES
A short proof of Rohlin’s theorem for complex surfaces. By Donu Arapura ........ 1143
CONTENTS—Continued from back cover

A noncompletely regular quiet quasi-uniformity. By P. Fletcher, J. Hejcman, and W. Hunsaker ................................................................. 1077
A remark on $\lambda_{2k-2}$. By Burton Randol ........................................ 1081
Compact and compactly generated subgroups of locally compact groups. By R. W. Bagley, T. S. Wu, and J. S. Yang .................................................. 1085
