PROVIDENCE, RHODE ISLAND USA
ISSN 0002-9939

Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Subscription information. *Proceedings of the American Mathematical Society* is published monthly. Subscription prices for Volumes 114–116 (1992) are $508 list; $406 institutional member; $305 individual member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmember after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of $25; subscribers in India must pay a postage surcharge of $38. Expedited delivery to destinations in North America—$38; elsewhere—$90.

Back number information. For back issues see the *AMS Catalog of Publications.*

Subscriptions and orders should be addressed to the American Mathematical Society, P. O. Box 1571, Annex Station, Providence, RI 02901-1571. *All orders must be accompanied by payment.* Other correspondence should be addressed to P. O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Manager of Editorial Services, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law, provided that a fee of $1.00 plus $.25 per page for each copy be paid directly to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

Proceedings of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Second-class postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Proceedings, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

Editorial Information

To be published in the *Proceedings*, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. *Proceedings* Editors solicit and encourage publication of worthy papers of length not exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

As of July 1, 1992, the backlog for this journal was approximately 16 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months.

A Copyright Transfer Agreement is required before a paper will be published in this journal. By submitting a paper to this journal, authors certify that the manuscript has not been submitted to nor is it under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

The first page of an article must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The *abstract* should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, there should be the 1991 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. This may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. A list of the numbers may be found in the annual index of *Mathematical Reviews*, published with the December issue starting in 1990, as well as from the electronic service e-MATH [**telnet e-MATH.ams.com** (or **telnet 130.44.1.100**). Login and password are **e-math**]. For journal abbreviations used in bibliographies, see the list of serials in the latest *Mathematical Reviews* annual index. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically-prepared manuscripts. The AMS encourages submission of electronically-prepared manuscripts in $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX because properly prepared electronic manuscripts save the author proofreading time and move more quickly through the production process. To this end, the Society

has prepared "preprint" style files, specifically the amsppt style of $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX and the amsart style of $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX, which will simplify the work of authors and of the production staff. Those authors who make use of these style files from the beginning of the writing process will further reduce their own effort.

Guidelines for Preparing Electronic Manuscripts provide additional assistance and are available for use with either $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX. Authors with FTP access may obtain these *Guidelines* from the Society's Internet node e-MATH.ams.com (130.44.1.100). For those without FTP access they can be obtained free of charge from the e-mail address guide-elec@math.ams.com (Internet) or from the Publications Department, P. O. Box 6248, Providence, RI 02940-6248. When requesting *Guidelines* please specify which version you want.

Electronic manuscripts should be sent to the Providence office only after the paper has been accepted for publication. Please send electronically prepared manuscript files via e-mail to pub-submit@math.ams.com (Internet) or on diskettes to the Publications Department address listed above. When submitting electronic manuscripts please be sure to include a message indicating in which publication the paper has been accepted.

Two copies of the paper should be sent directly to the appropriate Editor and the author should keep one copy. At that time authors should indicate if the paper has been prepared using $\mathcal{A}\mathcal{M}\mathcal{S}$-TEX or $\mathcal{A}\mathcal{M}\mathcal{S}$-LATEX. The *Manual for Authors of Mathematical Papers* should be consulted for symbols and style conventions. The *Manual* may be obtained free of charge from the e-mail address cust-serv@math.ams.com or from AMS, Customer Services Department, P. O. Box 6248, Providence, RI 02940-6248.

Any inquiries concerning a paper that has been accepted for publication should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, RI 02940-6248.

Editors

Authors are requested to send papers directly to the appropriate Editor (the one whose area of responsibility and expertise, as described below, most closely approximates the subject field of the manuscript). Only when in doubt about an appropriate Editor, should manuscripts be sent to the Coordinating Editor responsible for the area in mathematics most closely connected to the paper. If in doubt about the area, send manuscript to the Managing Editor, to whom all other communication about the journal should also be addressed. (All addresses should include the line "Department of Mathematics", unless another department is indicated.)

Managing Editor: Irwin Kra, SUNY at Stony Brook, Stony Brook, NY 11794–3651
email: irwin@math.sunysb.edu

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS
Coordinating Editor: Barbara Lee Keyfitz, University of Houston, Houston, TX 77204–3476
email: keyfitz@uh.edu

Partial differential equations
Barbara Lee Keyfitz

Dynamical systems and global analysis
Charles Pugh
University of California at Berkeley
Berkeley, CA 94720

Ordinary differential equations and special functions
Hal L. Smith
Arizona State University
Tempe, AZ 85287
email: athls@asuacad.bitnet

2. LIE GROUPS, TOPOLOGY, AND GEOMETRY
Coordinating Editor: Peter Li, University of California, Irvine, CA 92717
email: pli@orion.oac.uci.edu

Topological groups and Lie groups (symmetric spaces)
Roe Goodman
Rutgers University
New Brunswick, NJ 08903
email: goodman@math.rutgers.edu

Riemannian geometry (including affine pseudo-Riemannian, contact, classical, and Lorentzian geometries)
Christopher Croke
University of Pennsylvania
Philadelphia, PA 19104
email: ccroke@msri.org

Geometric analysis (geometric PDE, minimal surfaces, harmonic maps) and Kahler geometry
Peter Li

Algebraic topology (higher dimensional topology)
Thomas Goodwillie
Brown University
Box 1917
Providence, RI 02912
email: tomg@brownvm.bitnet

Metric and geometric topology
James West
Cornell University
White Hall
Ithaca, NY 14853–7901
email: west@mssun7.msi.cornell.edu

Set-theoretic and general topology
Franklin D. Tall
University of Toronto
Toronto, Ontario, Canada M5S 1A1
email: tall@math.toronto.edu

Low dimensional topology and differential topology (knot theory, 3- and 4-manifolds, Gauge-theory)
Ronald Stern
University of California
Irvine, CA 92717
email: rstern@oac.uci.edu

3. ANALYSIS AND OPERATOR THEORY
Coordinating Editor: Clifford J. Earle, Jr., Cornell University, White Hall, Ithaca, NY 14853
email: cliff@math.cornell.edu

One complex variable and potential theory
Albert Baernstein II
Washington University
St. Louis, MO 63130
email: C31801AB@WUVMD.BITNET

Several complex variables
Eric Bedford
Indiana University
Swain Hall East
Bloomington, IN 47401
email: BEDFORD@ucs.indiana.edu

Functional analysis and operator theory
Palle E. T. Jorgensen
University of Iowa
Iowa City, IA 52242

Functional analysis
Dale Alspach
Oklahoma State University
Stillwater, OK 74078
email: alspach@hilbert.math.okstate.edu

Complex variables, functional analysis, and operator theory
Theodore W. Gamelin
UCLA
Los Angeles, CA 90024
email: twg@math.ucla.edu

Real analysis
Andrew Bruckner
University of California
Santa Barbara, CA 93106
email: bruckner%henri@hub.ucsb.edu

Harmonic and general analysis
J. Marshall Ash
DePaul University
Chicago, IL 60614
email: MATJMA@DEPAUL.BITNET

Analytic number theory and automorphic forms
Dennis A. Hejhal
School of Mathematics
University of Minnesota
Minneapolis, MN 55455
email: mf10402@uc.msc.umn.edu

4. ALGEBRA, NUMBER THEORY, AND COMBINATORICS
Coordinating Editor: M. Susan Montgomery, University of Southern California, DRB 155, Los Angeles, CA 90089–1113
email: smontgom@math.usc.edu

General number theory
William Adams
University of Maryland
College Park, MD 20742
email: wwa@nina.umd.edu

General algebra
Lance W. Small
University of California San Diego
La Jolla, CA 92093-0112
email: lwsmall@ucsd.edu

Group theory
Ronald M. Solomon
Ohio State University
Columbus, OH 43210
email: solomon@function.mps.ohio-state.edu

Commutative algebra, *K*-theory, algebraic groups
Eric Friedlander
Northwestern University
Evanston, IL 60208
email: eric@math.nwu.edu

Combinatorics
Jeffry N. Kahn
Rutgers University
New Brunswick, NJ 08903
email: jkahn@elbereth.rutgers.edu

Analytic number theory and automorphic forms
Dennis A. Hejhal
School of Mathematics
University of Minnesota
Minneapolis, MN 55455
email: mf10402@uc.msc.umn.edu

Logic and foundations
Andreas R. Blass
University of Michigan
Ann Arbor, MI 48109–1003
email: Andreas_R._Blass@ub.cc.umich.edu

Lie algebras and Lie groups
Roe Goodman
Rutgers University
New Brunswick, NJ 08903
email: goodman@math.rutgers.edu

5. APPLIED MATHEMATICS, PROBABILITY, AND STATISTICS
Coordinating Editor: James Glimm, Department of Applied Mathematics and Statistics, SUNY at Stony Brook, Stony Brook, NY 11794–3600
email: glimm@ams.sunysb.edu

Probability
Lawrence Gray
School of Mathematics
University of Minnesota
Minneapolis, MN 55455
email: gray@math.umn.edu

Statistics
Wei Y. Loh
Department of Statistics
University of Wisconsin
1210 W. Dayton Street
Madison, WI 53706
email: loh@stat.wisc.edu

Applied mathematics
David Sharp
Theoretic Division
Los Alamos National Laboratory MSB285
Los Alamos, NM 87545
email:dhs@lanl.gov
or
John Trangenstein
Duke University
Durham, NC 27706
email: johnt@math.duke.edu

Operations research
Joseph S. B. Mitchell
Department of Applied Mathematics and Statistics
SUNY at Stony Brook
Stony Brook, NY 11794–3600
email: jsbm@ams.sunysb.edu

CONTENTS—*Continued from back cover*

A converse of Lotz's theorem on uniformly continuous semigroups. By J. M. A. M. VAN NEERVEN 525

E. LOGIC AND FOUNDATIONS

Uniqueness of unbounded Loeb measure using Choquet's theorem. By BOŠKO ŽIVALJEVIĆ 529

G. TOPOLOGY

G-transversality revisited. By S. R. COSTENOBLE and S. WANER 535
Representing knot groups into SL(2, C). By D. COOPER and D. D. LONG 547
A two-point set must be zero-dimensional. By JOHN KULESZA 551
On the inverse of Mañé's projection. By H. MOVAHEDI-LANKARANI 555
On the mapping class group of spherical 3-orbifolds. By SCIPIO CUCCAGNA and BRUNO ZIMMERMANN 561
On the Thom spectra over $\Omega(SU(n)SO(n))$ and Mahowald's X_k spectra. By DUNG YUNG YAN 567
Nielsen numbers of periodic maps on solvmanifolds. By KYUNG BAI LEE 575

ERRATA

Errata to "On induced covariant systems". By SEIGFRIED ECHTERHOFF 581

ADDENDUM

Addendum to "On the equation $\operatorname{div}(|\nabla u|^{p-2}\nabla u) + \lambda|u|^{p-2}u = 0$". By PETER LINDQVIST 583

PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY

CONTENTS

Vol. 116, No. 2 October 1992 Whole No. 400

A. ALGEBRA AND NUMBER THEORY

The field of definition of a real representation of a quiver Q. By AIDAN SCHOFIELD 293
Epimorphic adjunction of a weak order unit to an archimedean lattice-ordered group. By RICHARD N. BALL, ANTHONY W. HAGER, and ANN KIZANIS 297
Non-Cohen-Macaulay symbolic blow-ups for space monomial curves. By MAYUMI MORIMOTO and SHIRO GOTO 305
Finite exponential series and Newman polynomials. By BART GODDARD 313
Crossed products of semisimple cocommutative Hopf algebras. By WILLIAM CHIN 321
Simple restricted modules for the restricted contact lie algebras. By RANDALL R. HOLMES 329
Free subsemigroups of domains. By A. A. KLEIN 339
Varieties attached to an $SL_2(2^k)$-module. By GEOFFREY MASON 343
Projections in Kac-Moody Lie algebras. By KAILASH C. MISRA and MOHAN S. PUTCHA . 351

B. ANALYSIS

The Hausdorff dimension of elliptic measure— a counterexample to the Oksendahl conjecture in $\mathbb{R}^2$. By CAROLINE SWEEZY 361
On Archimedean ordered vector spaces and a characterization of simplices. By GERHARD GIERZ and BORIS SHEKHTMAN 369
On some property of functions defined on R^2 that are $\mathcal{S}$-approximately continuous with respect to one variable. By R. CARRESE and E. ŁAZAROW 377
Interpolation between weighted Hardy spaces. By MICHAEL CWIKEL, JOHN E. MCCARTHY, and THOMAS H. WOLFF 381
On Hausdorff dimension of recurrent net fractals. By SERGIO STELLA 389
Graph theoretic bound on number of A.C.I.M. for random transformation. By PAWEŁ GÓRA 401
A smooth holomorphically convex disc in $\mathbb{C}^2$ that is not locally polynomially convex. By FRANC FORSTNERIČ 411
Hardy integral estimates for the Laplace transform. By STEVEN BLOOM 417
The differential equation $Q = 0$ in which Q is a quadratic form in y'', y', y having meromorphic coefficients. By ROGER CHALKLEY 427
Complex sequences whose "moments" all vanish. By W. M. PRIESTLEY 437
Linear transformations of Wiener integrals. By CHULL PARK and DAVID SKOUG 445
Two notes on convergence and divergence a.e. of Fourier series with respect to some orthogonal systems. By J. J. GUADALUPE, M. PEREZ, F. J. RUIZ, and J. L. VARONA 457
The Hausdorff mean of a Fourier-Stieltjes transform. By CONSTANTINE GEORGAKIS 465
Remarks on weak compactness of operators defined on certain injective tensor products. By G. EMMANUELE 473
Maximal Douglas subalgebras and minimal support points. By CARROLL GUILLORY and KEIJI IZUCHI 477
Finitely generated radical ideals in H^∞. By ULRICH DAEPP, PAMELA GORKIN, and RAYMOND MORTINI 483
Distance to invertible linear operators without separability. By RICHARD BOULDIN 489
Uniqueness of the uniform norm with an application to topological algebras. By S. J. BHATT and D. J. KARIA 499
Compact weighted composition operators on L^p. By HIROYUKI TAKAGI 505
Nontrivial solutions of semilinear elliptic equations with continuous or discontinuous nonlinearities. By NORIKO MIZOGUCHI 513
Sur la structure des composantes connexes semi-fredholm de $B(H)$. By M. MBEKHTA .. 521
