**PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY**

**CONTENTS**

Vol. 131, No. 6 Whole No. 528 June 2003

**A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS**

Aurora Olivieri and Ángel del Río, Bicyclic units of $\mathbb{Z}_n$ .......................... 1649
G. Mashevitzky and Boris M. Schein, Automorphisms of the endomorphism semigroup of a free monoid or a free semigroup .......................... 1655
R. J. Simpson and R. Tijdeman, Multi-dimensional versions of a theorem of Fine and Wilf and a formula of Sylvester .......................... 1661
Emre Alkan, Nonvanishing of Fourier coefficients of modular forms .......................... 1673
Ákos Seress, A product decomposition of infinite symmetric groups .......................... 1681
Teimuraz Pirashvili, André-Quillen homology via functor homology .......................... 1687
Eva Maria Feichtner, Rational versus real cohomology algebras of low-dimensional toric varieties .......................... 1695
P. Corvaja and U. Zannier, On the greatest prime factor of $(ab + 1)(ac + 1)$ .......................... 1705

**B. ANALYSIS**

Young-Ho Ahn and Mariusz Lemańczyk, An algebraic property of joinings .......................... 1711
R. Feres and A. Zeghib, Leafwise holomorphic functions .......................... 1717
Vuk Milišić, Stability and convergence of discrete kinetic approximations to an initial-boundary value problem for conservation laws .......................... 1727
Rong-Qing Jia, Convergence rates of cascade algorithms .......................... 1739
Omri Sarig, Existence of Gibbs measures for countable Markov shifts .......................... 1751
Jochen Wengenroth, Hypercyclic operators on non-locally convex spaces .......................... 1759
Jose Barrionuevo and Michael T. Lacey, A weak–type orthogonality principle .......................... 1763
Leonid Golinskii, Mass points of measures on the unit circle and reflection coefficients .......................... 1771
Serguei Shimorin, On Beurling-type theorems in weighted $l^2$ and Bergman spaces .......................... 1777
Frédéric Bayart, Similarity to an isometry of a composition operator .......................... 1789
Nathan S. Feldman and Paul McGuire, On the spectral picture of an irreducible subnormal operator II .......................... 1793
M. H. Annaby, On sampling theory associated with the resolvents of singular Sturm-Liouville problems .......................... 1803
Ken Dykema and Florin Rădulescu, Rescalings of free products of II$_1$–factors .......................... 1813
Dan Marshall, The product of a nonsymmetric Jack polynomial with a linear function .......................... 1817
P. Lefèvre and L. Rodríguez-Piazza, $p$-Rider sets are $q$-Sidon sets .......................... 1829
Jongmin Han, Asymptotic limit for condensate solutions in the Abelian Chern-Simons Higgs model .......................... 1839
G. Fonseca, F. Linares, and G. Ponce, Global existence for the critical generalized KdV equation .......................... 1847
Daomin Cao and Shuangjie Peng, A global compactness result for singular elliptic problems involving critical Sobolev exponent .......................... 1857
Lajos Molnár, Local automorphisms of operator algebras on Banach spaces .......................... 1867
P. C. Fenton, $\cos \pi \lambda$ again .......................... 1875
Peter J. Wood, Invariant complementation and projectivity in the Fourier algebra .......................... 1881
E. N. Dancer and Yihong Du, Some remarks on Liouville type results for quasilinear elliptic equations .......................... 1891
Gady Kozma and Alexander Olevskiĭ, Random Menshov spectra .......................... 1901
G. TOPOLOGY

István Juhász, Saharon Shelah, Lajos Soukup, and Zoltán Szentmiklóssy,
A tall space with a small bottom ........................................ 1907

Varghese Mathai, Thomas Schick, and Stuart Yates, Approximating spectral
invariants of Harper operators on graphs II ............................ 1917

Felix Schlenk, Volume preserving embeddings of open subsets of $\mathbb{R}^n$ into manifolds 1925

Paweł Krupski, Means on solenoids ........................................ 1931

M. Bakuradze, M. Jibladze, and V. V. Vershinin, Characteristic classes and
transfer relations in cobordism ........................................... 1935

Robert W. Donley, Jr., A cocycle formula for the quaternionic discrete series . 1943

Adrian Butscher, Deformations of minimal Lagrangian submanifolds with
boundary ............................................................................ 1953

Witold Marciszewski, A function space $C_p(X)$ without a condensation onto a
$\sigma$-compact space ............................................................ 1965

Ilijas Farah and Sławomir Solecki, Two $F_{\sigma\delta}$ ideals .................... 1971
Editorial Information

To be published in the *Proceedings*, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. *Proceedings* Editors solicit and encourage publication of worthy papers of length not exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for \texttt{AMS-LATEX} or \texttt{AMS-TEX}.

Very short notes not to exceed two printed pages are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

As of January 31, 2003, the backlog for this journal was approximately 7 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in four months (the time necessary for editing and composing a typical issue). In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

**Initial submission.** Two copies of the paper should be sent directly to the appropriate Editor and the author should keep a copy.

**IF an editor is agreeable,** an electronic manuscript prepared in \texttt{TEX} or \texttt{LATEX} may be submitted by pointing to an appropriate URL on a preprint or e-print server.

The first page of an article must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper should be the 2000 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The list of classifications is also available in print starting with the 1999 annual index of Mathematical Reviews. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from \url{www.ams.org/publications/}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

**Electronically prepared manuscripts.** The AMS encourages electronically prepared manuscripts, with a strong preference for \texttt{AMS-LATEX}. To this end, the Society has prepared \texttt{AMS-LATEX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication.
series. Articles properly prepared using the \texttt{AMS-L\LaTeX} style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \TeX, using \texttt{AMS-L\LaTeX} also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. \texttt{AMS-L\LaTeX} papers also move more efficiently through the production stream, helping to minimize publishing costs.

\texttt{AMS-L\LaTeX} is the highly preferred format of \TeX, but author packages are also available in \texttt{AMS-\TeX}. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \texttt{\LaTeX} or plain \TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. \texttt{\LaTeX} users will find that \texttt{AMS-L\LaTeX} is the same as \texttt{\LaTeX} with additional commands to simplify the typesetting of mathematics, and users of plain \TeX should have the foundation for learning \texttt{AMS-L\LaTeX}.

Authors may retrieve an author package from the AMS website starting from \url{www.ams.org/tex/} or via FTP to \url{ftp.ams.org} (login as \emph{anonymous}, enter username as password, and type \texttt{cd pub/author-info}). The \textit{AMS Author Handbook} and the \textit{Instruction Manual} are available in PDF format following the author packages link from \url{www.ams.org/tex/}. The author package can also be obtained free of charge by sending email to \texttt{pub@ams.org} (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{AMS-L\LaTeX} or \texttt{AMS-\TeX}, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

At the time of submission, authors should indicate if the paper has been prepared using \texttt{AMS-L\LaTeX} or \texttt{AMS-\TeX} and provide the Editor with a paper manuscript that matches the electronic manuscript. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via email to \texttt{pub-submit@ams.org} (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

\textbf{Electronic graphics.} Comprehensive instructions on preparing graphics are available starting from \url{www.ams.org/jourhtml/authors.html}. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15\% and 85\%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10\%.
AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article to the Editor. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web and via email. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/ or via email sent to mstrack-query@ams.org. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word all on the subject line. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

\TeX\ files available. Beginning with the January 1992 issue of the Bulletin and the January 1996 issues of Transactions, Proceedings, Mathematics of Computation, and the Journal of the AMS, \TeX\ files can be downloaded from the AMS website, starting from www.ams.org/journals/. Authors without Web access may request their files at the address given below after the article has been published. For Bulletin papers published in 1987 through 1991 and for Transactions, Proceedings, Mathematics of Computation, and the Journal of the AMS papers published in 1987 through 1995, \TeX\ files are available upon request for authors without Web access by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The \TeX\ file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. Note: Because \TeX\ production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, \TeX\ files cannot be guaranteed to run through the author’s version of \TeX\ without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author’s \TeX\ environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

Authors are requested to send papers directly to the appropriate Editor (the one whose area of responsibility and expertise, as described below, most closely approximates the subject field of the manuscript). Only when in doubt about an appropriate Editor, should manuscripts be sent to the Coordinating Editor responsible for the area in mathematics most closely connected to the paper. If in doubt about the area, send the manuscript to the Managing Editor, to whom all other communication about the journal should also be addressed. (All addresses should include the line “Department of Mathematics”, unless another department is indicated.)

Managing Editor: Eric Bedford, Indiana University, Bloomington, IN 47405-5701 USA; e-mail: bedford@indiana.edu

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS
   Coordinating Editor: Linda Keen, CUNY-Lehman College, Bronx, NY 10468 USA; e-mail: linda@alpha.lehman.cuny.edu; keen@bers.gc.cuny.edu
   Dynamical systems and ergodic theory, Michael Handel, Department of Mathematics and Computer Science, Herbert Lehman College (CUNY), Bronx, NY 10468-1589 USA; e-mail: michael@alpha.lehman.cuny.edu
   Global analysis, Jozef Dodziuk, Ph.D. Program in Mathematics, Graduate School and University Center (CUNY), 365 Fifth Avenue, New York, NY 10016-4309 USA; e-mail: jdodziuk@gc.cuny.edu
   Ordinary differential equations and special functions, Carmen C. Chicone, University of Missouri, Columbia, MO 65211-0001 USA; e-mail: carmen@chicone.math.missouri.edu
   Partial differential equations, David S. Tartakoff, University of Illinois at Chicago, Chicago, IL 60607 USA; e-mail: dst@uic.edu

2. LIE GROUPS, TOPOLOGY, AND GEOMETRY
   Coordinating Editor: Ronald A. Fintushel, Michigan State University, East Lansing, MI 48824-1027 USA; e-mail: ronfint@math.msu.edu
   Algebraic topology, Paul Goerss, Northwestern University, Evanston, IL 60208-2730 USA; e-mail: pgoerss@math.nwu.edu
   Complex and Kähler geometry, Mohan Ramachandran, State University of New York at Buffalo, Buffalo, NY 14260-2900 USA; e-mail: ramac-m@newton.math.buffalo.edu
   Differential geometry (Riemannian, symplectic, contact, Kähler, and complex geometries), Jon G. Wolfson, Michigan State University, East Lansing, MI 48824-1027 USA; e-mail: wolfson@math.msu.edu
   Geometric analysis (geometric PDE, minimal surfaces, and harmonic maps), Richard A. Wentworth, Johns Hopkins University, Baltimore, MD 21218 USA; e-mail: wentworth@jhu.edu
   Low dimensional topology, gauge theory, 4-manifolds, Ronald A. Fintushel
   Riemannian geometry (including affine, pseudo-Riemannian, contact, classical, and Lorentzian geometries), Wolfgang Ziller, University of Pennsylvania, Philadelphia, PA 19104-6317 USA; e-mail: wziller@math.upenn.edu
   Set-theoretic and general topology, Alan Dow, University of North Carolina at Charlotte, Charlotte, NC 28223-0001 USA; e-mail: adow@math.uncc.edu
   Topological groups and Lie groups (symmetric spaces), Rebecca Herb, University of Maryland, College Park, MD 20742 USA; e-mail: rah@math.umd.edu

3. ANALYSIS AND OPERATOR THEORY
   Coordinating Editor: Christopher D. Sogge, Johns Hopkins University, Baltimore, MD 21218 USA; e-mail: sogge@jhu.edu
Banach spaces and linear functional analysis, N. Tomczak-Jaegermann, University of Alberta, Edmonton, AB, Canada T6G 2G1; e-mail: ntomczak@math.ualberta.ca; nicole.tomczak@ualberta.ca

Geometric measure theory and classical real analysis, David Preiss, Department of Mathematics, University College London, Gower Street, London WC1E 6BT, United Kingdom; e-mail: dp@math.ucl.ac.uk

Harmonic analysis, Andreas Seeger, University of Wisconsin, Madison, WI 53706 USA; e-mail: seeeger@math.wisc.edu

Linear and nonlinear functional analysis, Jonathan M. Borwein, Department of Mathematics and Statistics, Simon Fraser University, Burnaby, BC, Canada V5A 1S6; e-mail: jborwein@cecm.sfu.ca

One complex variable and potential theory, Juha M. Heinonen, University of Michigan, Ann Arbor, MI 48109-1109 USA; e-mail: PAMS1@math.lsa.umich.edu

Operator algebras and wavelets, David R. Larson, Texas A&M University, College Station, TX 77843-3368 USA; e-mail: larson@math.tamu.edu

Operator theory, Joseph A. Ball, Virginia Polytechnic Institute and State University, Blacksburg, VA 24061 USA; e-mail: ball@math.vt.edu

Several complex variables, Mei-Chi Shaw, University of Notre Dame, Notre Dame, IN 46556-0398 USA; e-mail: mei-chi.shaw.1@nd.edu

4. ALGEBRA, NUMBER THEORY, COMBINATORICS, AND LOGIC

Coordinating Editor: Lance W. Small, University of California San Diego, La Jolla, CA 92093-0112 USA; e-mail: lwsmall@ucsd.edu

Algebraic geometry, Michael Stillman, Cornell University, Malott Hall, Ithaca, NY 14853-4201 USA; e-mail: mike@math.cornell.edu

Automorphic forms, number theory, and applications of number theory, Wen-Ching Winnie Li, Pennsylvania State University, University Park, PA 16802-6401 USA; e-mail: wli@math.psu.edu

Combinatorics, John R. Stembridge, University of Michigan, Ann Arbor, MI 48109-1109 USA; e-mail: jrs@umich.edu

Commutative algebra, Bernd Ulrich, Purdue University, West Lafayette, IN 47907-1395 USA; e-mail: ulrich@math.purdue.edu

General number theory, David E. Rohrlich, Boston University, Boston, MA 02215-2411 USA; e-mail: rohrlich@math.bu.edu

Group theory, Jonathan I. Hall, Michigan State University, East Lansing, MI 48824-1027 USA; e-mail: jhall@math.msu.edu

Lie algebras, Dan M. Barbasch, Cornell University, Malott Hall, Ithaca, NY 14853-4201 USA; e-mail: barbasch@math.cornell.edu

Logic and foundations, Carl G. Jockusch, Jr., University of Illinois, 1409 W. Green St., Urbana, IL 61801-2917 USA; e-mail: jockusch@math.uiuc.edu

Noncommutative rings, Martin Lorenz, Temple University, Philadelphia, PA 19122-6094 USA; e-mail: lorenz@math.temple.edu

5. APPLIED MATHEMATICS, PROBABILITY, AND STATISTICS

Coordinating Editor: Mark J. Ablowitz, Department of Applied Mathematics, Campus Box 526, University of Colorado, Boulder, CO 80309-0526 USA; e-mail: markjab@newton.colorado.edu

Applied mathematics, David Sharp, Theoretical Division, Los Alamos National Laboratory MSB285, Los Alamos, NM 87545 USA; e-mail: dhs@lanl.gov

Hyperbolic partial differential equations, Suncica Canic, University of Houston, Houston, TX 77204-3476 USA; e-mail: canic@math.uh.edu
Probability, Richard C. Bradley, Indiana University, Bloomington, IN 47405-4301 USA; e-mail: bradleyr@indiana.edu

Statistics, Richard A. Davis, Department of Statistics, Colorado State University, Fort Collins, CO 80523-1877 USA; e-mail: rdcollstat.colostate.edu
