PROCEEDINGS OF THE AMERICAN MATHEMATICAl SOCIETY

CONTENTS

Vol. 134, No. 12 Whole No. 570 December 2006

A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

J. C. Rosales, Symmetric modular Diophantine inequalities 3417
Toshihiko Matsuki, Equivalence of domains arising from duality of orbits on flag manifolds II 3423
Ann Lemahieu, Dirk Segers, and Willem Veys, On the poles of topological zeta functions 3429
Y. Kinoshita, K. Nishida, Y. Yamanaka, and A. Yoneda, On Burch's inequality and a reduction system of a filtration 3437
D. Choi, A simple proof of Zagier duality for Hilbert modular forms 3445
Adam Korányi and Róbert Szőke, On Weyl group equivariant maps 3449
E. A. O'Brien, Carlo M. Scoppola, and M. R. Vaughan-Lee, Not every $p$-group can be generated by elements of the same order 3457
Desmond Sheiham, Universal localization of triangular matrix rings 3465
Giuliana Fatabbi, Brian Harbourne, and Anna Lorenzini, Resolutions of ideals of fat points with support in a hyperplane 3475
Robert L. Snider, Periodic groups whose simple modules have finite central endomorphism dimension 3485

B. ANALYSIS

Paul Binding, Lyonell Boulton, Jan Čepička, Pavel Drábek, and Petr Girg, Basis properties of eigenfunctions of the $p$-Laplacian 3487
Martin G. Grigorian and Robert E. Zínk, Greedy approximation with respect to certain subsystems of the Walsh orthonormal system 3495
Arne Ledet and Alexander Yu. Solynin, Conformal mapping and ellipses 3507
Belmesnaoui Aqzzouz and Redouane Nouira, Sur l'ideal d'ordre des operateurs AM-compacts 3515
Alexander Schuster, The maximum principle for the Bergman space and the Möbius pseudodistance for the annulus 3525
Zhijian Wu, Ruhan Zhao, and Nina Zorboska, Toeplitz operators on Bloch-type spaces 3531
Rareş Răsdeaconu, The Kodaira dimension of diffeomorphic Kähler threefolds 3543
Gábor Kun, A surprising covering of the real line 3555
L. de Michele and D. Roux, Gibbs' phenomenon and surface area 3561
El Maati Ouhabaz, Sharp Gaussian bounds and $L^p$-growth of semigroups associated with elliptic and Schrödinger operators 3567
D. Azé and J.-N. Corvellec, A variational method in fixed point results with inwardness conditions 3577
Thomas Bieske and Jason Gong, The $P$-Laplace equation on a class of Grushin-type spaces 3585
David Marín, Rigidity of certain holomorphic foliations 3595
Gerald Schmieder, Fixed points of univalent functions II 3605
S. Boulite, L. Maniar, and G. M. N’Guérékata, Almost automorphic solutions for semilinear boundary differential equations 3613
Miroslav Pavlović, A short proof of an inequality of Littlewood and Paley 3625

C. APPLIED MATHEMATICS

Helmut Linde, A lower bound for the ground state energy of a Schrödinger operator on a loop 3629
D. GEOMETRY
Nobukazu Otsuki and Sintaro Suzuki, On a certain class of linear Hamiltonian maps ................................................................. 3637
Andrzej Derdzinski, A Myers-type theorem and compact Ricci solitons .... 3645
Dimitri Leemans, Almost simple groups of Suzuki type acting on polytopes ... 3649

E. LOGIC AND FOUNDATIONS
Christina Brech, On the density of Banach spaces $C(K)$ with the Grothendieck property ...................................................... 3653

F. STATISTICS AND PROBABILITY
Y. Gordon, A. E. Litvak, C. Schütt, and E. Werner, On the minimum of several random variables .................................................. 3665
Yoon Tae Kim and Jong Woo Jeon, An Itô formula for a fractional Brownian sheet with arbitrary Hurst parameters .............................. 3677

G. TOPOLOGY
Kokoro Tanaka, Khovanov-Jacobsson numbers and invariants of surface-knots derived from Bar-Natan’s theory .............................. 3685
Inkang Kim, Length spectrum in rank one symmetric space is not arithmetic ... 3691
Hiroshi Matsuda, Links in an open book decomposition and in the standard contact structure ...................................................... 3697
Alexander Engström, A short proof of a conjecture on the connectivity of graph coloring complexes .............................................. 3703
Malkhaz Bakuradze and Vladimir Vershinin, Morava $K$-theory rings for the dihedral, semidihedral and generalized quaternion groups in Chern classes . 3707
Shuji Yamamoto and Atsushi Yamashita, A counterexample related to topological sums ......................................................... 3715
INDEX TO VOLUME 134 (2006)

Abdenur, Flavio, Christian Bonatti, and Sylvain Crovisier.  
Global dominated splittings and the $C^1$ Newhouse phenomenon, 2229

Abreu, Luis Daniel.  
Functions $q$-orthogonal with respect to their own zeros, 2695

Acker, Andrew.  
On the non-starlikeness of solutions to the starlike interior wake problem, 749

Agarwal, Ravi P., Kanishka Perera, and Donal O'Regan.  
Multiple positive solutions of singular problems by variational methods, 817

Ageev, Oleg N.  
Spectral rigidity of group actions: Applications to the case $gr(t,s; ts = st^2)$, 1331

Agrafeuil, Cyril.  
A Beurling-Carleson set which is a uniqueness set for a given weighted space of analytic functions, 3287

Agranovsky, Mark L., and E. K. Narayanan.  
Isotopic families of contact manifolds for elliptic PDE, 2117

Aizpuru, Antonio, and Francisco Javier García-Pacheco.  
$L^2$-summand vectors in Banach spaces, 2109

Akbar, Amir.  
Simultaneous non-vanishing of twists, 3143

Akbar, Amir, and Qiang Wang.  
A generalized Lucas sequence and permutation invariants, 15

Akin, Hasan.  
See Mukhamedov, Farruh

A selection theorem in metric trees, 2957

Alvarez, Ivana.  
Semi-classical behavior of the spectral function, 2295

Extreme contractions on continuous vector-valued function spaces, 2661

Alkan, Emre, Florin Stan, and Alexandru Zaharescu.  
Lehmer k-tuples, 2807

Allcock, Daniel.  
Hyperbolic surfaces with prescribed infinite symmetry groups, 3057

Alday, Christopher, and John Oprea.  
A c-symplectic free $S^1$-manifold with contractible orbits and $cat = \frac{1}{2} \dim$, 599

Allen, Stephen, David Pask, and Aidan Sims.  
A dual graph construction for higher-rank graphs, and $K$-theory for finite 2-graphs, 455

Andres, Jan, and Tomáš Fürst.  
An example of application of the Nielsen theory to integro-differential equations, 1985

Antezana, J., G. Corach, M. Ruiz, and D. Stojanoff.  
Oblique projections and frames, 1031

Anton, Marian F.  
A stability property for linear groups, 93

Aqzzouz, Belmesnaoui, and Redouane Nouira.  
Sur l’ideal d’ordre des operateurs AM-Compacts, 3515

Aqzzouz, Belmesnaoui, Redouane Nouira, and Larbi Zraoula.  
Sur les operateurs de Dunford-Pettis postifs qui sont faiblement compacts, 1161

Arone, Greg.  
See Kuhn, Nicholas J.

Artstein-Avidan, S., O. Friedland, and V. Milman.  
Geometric applications of Chernoff-type estimates and a ZigZag approximation for balls, 1735

Arvanitakis, Alexander D.  
Weakly null sequences with an unconditional subsequence, 67

Asadi, Mohammad B., and A. Khooshravi.  
An elementary proof of the characterization of isomorphisms of standard operator algebras, 3255

Uniqueness for multiple trigonometric and Walsh series with convergent rearranged square partial sums, 1681

Astengo, Francesca, and Bianca Di Blasio.  
Sobolev spaces and the Cayley transform, 1319

Avdispahić, Muharem, and Lejla Smajlović.  
On maximal operators on $k$-spheres in $\mathbb{Z}^n$, 2125

Azé, D., and J.-N. Corvellec.  
A variational method in fixed point results with inwardness conditions, 3577

Bailey, David H., and Michał Misiurewicz.  
A strong hot spot theorem, 2495

Bağ, Włodzimierz, and Andrzej Hulanicki.  
Remarks on spectra and $L^1$ multipliers for convolution operators, 1467

Bakuradze, Malkhaz, and Vladimir Vershinin.  
Morava K-theory rings for the dihedral, semidihedral and generalized quaternion groups in Chern classes, 3707

Balogh, Zoltán M., and Marianna Csörnyei.  
Scaled-oscillation and regularity, 2667

Bandt, Christoph, Nguyen Viet Hung, and Hui Rao.  
On the open set condition for self-similar fractals, 1369

Baranov, A. D.  
On $L^1$-norms of meromorphic functions with fixed poles, 3003

Bartoszyński, Tomek, and Boaz Tsaban.  
Hereditary topological diagonalizations and the Menger-Hurewicz Conjectures, 605
INDEX TO VOLUME 134 (2006)

Proceedings of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Submission information. See Information for Authors at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Back number information. For back issues see www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. All orders must be accompanied by payment. Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Proceedings of the American Mathematical Society is published monthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Proceedings, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

© 2006 by the American Mathematical Society. All rights reserved.

This journal is indexed in Mathematical Reviews, Zentralblatt MATH, Science Citation Index®️, Science Citation Index™️–Expanded, ISI Alerting Services™️, CompuMath Citation Index®, and Current Contents®️/Physical, Chemical & Earth Sciences.

Printed in the United States of America.

The paper used in this journal is acid-free and falls within the guidelines established to ensure permanence and durability.

Editorial Information

To be published in the *Proceedings*, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. *Proceedings* Editors solicit and encourage publication of worthy papers of length not exceeding 10 published pages. Published pages are the same size as those generated in the style files provided for *AMS-\LaTeX* or *AMS-\TeX*.

Information on the backlog for this journal can be found on the AMS website starting from [http://www.ams.org/proc](http://www.ams.org/proc).

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

**Initial submission.** The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at [www.ams.org/cgi-bin/peertrack/submission.pl](http://www.ams.org/cgi-bin/peertrack/submission.pl), or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Proceedings* and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper should be the 2000 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from [www.ams.org/msc/](http://www.ams.org/msc/). The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from [www.ams.org/publications/](http://www.ams.org/publications/). To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at [www.ams.org/mrlookup/](http://www.ams.org/mrlookup/).

**Electronically prepared manuscripts.** The AMS encourages electronically prepared manuscripts, with a strong preference for *AMS-\LaTeX*. To this end, the Society has prepared *AMS-\LaTeX* author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the *AMS-\LaTeX* style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of \TeX, using *AMS-\LaTeX* also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time.*AMS-\LaTeX*
papers also move more efficiently through the production stream, helping to minimize publishing costs.

\texttt{AMSTeX} is the highly preferred format of \TeX, but author packages are also available in \texttt{AMSTeX}. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \texttt{AMSTeX} or plain \TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. \texttt{AMSTeX} users will find that \texttt{AMSLaTeX} is the same as \texttt{AMSTeX} with additional commands to simplify the typesetting of mathematics, and users of plain \TeX should have the foundation for learning \texttt{AMSLaTeX}.

Authors may retrieve an author package from the AMS website starting from \url{www.ams.org/tex/} or via FTP to \url{ftp.ams.org} (login as \texttt{anonymous}, enter username as password, and type \texttt{cd pub/author-info}). The \texttt{AMS Author Handbook} and the \texttt{Instruction Manual} are available in PDF format following the author packages link from \url{www.ams.org/tex/}. The author package can also be obtained free of charge by sending email to \texttt{tech-support@ams.org} (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{AMSLaTeX} or \texttt{AMSTeX} and the publication in which your paper will appear. Please be sure to include your complete email address.

\textbf{After acceptance.} The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at \url{www.ams.org/submit-book-journal/}, sent via email to \texttt{pub-submit@ams.org} (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via e-mail or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

\textbf{Electronic graphics.} Comprehensive instructions on preparing graphics are available starting from \url{www.ams.org/jourhtml/authors.html}. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15\% and 85\%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10\%.

\textbf{AMS policy on making changes to articles after posting.} Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type
of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web and via email. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/ or via email sent to mstrack-query@ams.org. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word all on the subject line. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

\TeX\ files available upon request. \TeX\ files are available upon request for authors by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The \TeX\ file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. Note: Because \TeX\ production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, \TeX\ files cannot be guaranteed to run through the author’s version of \TeX\ without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author’s \TeX\ environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
