A. Melman, Comment on a result by Alpin, Chien, and Yeh .......................... 775
Douglas Bowman and Alon Regev, Counting equivalence classes of vertex pairs modulo the dihedral action on the associahedron .......... 779
Bo-Hae Im, Concordant numbers within arithmetic progressions and elliptic curves .................................................................................. 791
Amanda Knecht, Weak approximation for general degree two del Pezzo surfaces 801
Hatice Şahinoğlu, On the independence of Heegner points on CM elliptic curves associated to distinct quadratic imaginary fields .............. 813
Artur Bartoszewicz and Szymon Glab, Strong algebrability of sets of sequences and functions ................................................................. 827
Müge Taşkın, Inner tableau translation property of the weak order and related results ................................................................................ 837
W. Patrick Hooper, Another Veech triangle .................................................. 857

## B. ANALYSIS

Lixin Cheng, Duanxu Dai, and Yunbai Dong, A sharp operator version of the Bishop-Phelps theorem for operators from $\ell_1$ to CL-spaces .......................... 867
Adam Osękowski, A sharp one-sided bound for the Hilbert transform .............. 873
Chao-Zhong Chen, C. K. Law, Wei-Cheng Lian, and Wei-Chuan Wang, Optimal upper bounds for the eigenvalue ratios of one-dimensional $p$-Laplacian ........................................................................................................ 883
Claudia Pinzari, Growth rates of dimensional invariants of compact quantum groups and a theorem of Høegh-Krohn, Landstad and Størmer ............ 895
Guy H. Flint, Ben de Pagter, and Fedor A. Sukochev, The Dixmier approximation theorem in algebras of measurable operators .................. 909
Constantinos Kardaras and Gordan Žitković, Forward-convex convergence in probability of sequences of nonnegative random variables .......... 919
Taras Banakh and Magdalena Nowak, A 1-dimensional Peano continuum which is not an IFS attractor .............................................................. 931
Sandra Saliani, $\ell^2$-Linear independence for the system of integer translates of a square integrable function .................................................. 937
Bianca Morelli Rodolfo Calsavara and José Luiz Boldrini, Solutions of an advected phase field system with low regularity velocity .................... 943
Satoshi Tsujimoto, Luc Vinet, and Alexei Zhedanov, Dual $-1$ Hahn polynomials: “Classical” polynomials beyond the Leonard duality .............. 959
David Bate and Gareth Speight, Differentiability, porosity and doubling in metric measure spaces ................................................................. 971
Ronnie Pavlov, A class of nonsofic multidimensional shift spaces .................... 987
Daniel Grieser, Monotone unitary families ..................................................... 997
Bai-Ni Guo and Feng Qi, Refinements of lower bounds for polygamma functions 1007
D. GEOMETRY

Krishnendu Gongopadhyay, Algebraic characterization of isometries of the complex and the quaternionic hyperbolic 3-spaces ........................................ 1017
Bijan Ahmadi Kakavandi, Weak topologies in complete CAT(0) metric spaces 1029

E. LOGIC AND FOUNDATIONS

Timothy H. McNicholl, The power of backtracking and the confinement of length 1041
Piotr Zakrzewski, On Borel sets belonging to every invariant ccc $\sigma$-ideal on $2^\mathbb{N}$ 1055

F. STATISTICS AND PROBABILITY

Feng-Yu Wang and Lixin Yan, Gradient estimate on convex domains and applications ................................................................. 1067

G. TOPOLOGY

Faen Wu and Xinnuan Zhao, Non-existence of quadratic harmonic maps of $S^4$ into $S^5$ or $S^6$ ................................................................. 1083
Aaron Abrams, David Gay, and Valerie Hower, Discretized configurations and partial partitions ......................................................... 1093
Editorial Information

To be published in the *Proceedings*, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. *Proceedings* Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for *AMSLATE* or *AMSTEX*.

Information on the backlog for this journal can be found on the AMS website starting from [http://www.ams.org/proc](http://www.ams.org/proc).

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

**Initial submission.** The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at [www.ams.org/submission/proc](http://www.ams.org/submission/proc), or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Proceedings* and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from [www.ams.org/msc](http://www.ams.org/msc). The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from [www.ams.org/msnhtml/serials.pdf](http://www.ams.org/msnhtml/serials.pdf). To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at [www.ams.org/mrlookup](http://www.ams.org/mrlookup).

**Electronically prepared manuscripts.** The AMS encourages electronically prepared manuscripts, with a strong preference for *AMSLATE*. To this end, the Society has prepared *AMSLATE* author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the *AMSLATE* style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of *TEX*, using *AMSLATE* also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. *AMSLATE* papers also move more efficiently through the production stream, helping to minimize publishing costs.
\texttt{AMS-L\TeX} is the highly preferred format of \TeX, but author packages are also available in \texttt{AMS-\TeX}. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in \texttt{AMS-\TeX} or plain \TeX are normally not acceptable due to the high amount of technical time required to ensure that the file will run properly through the AMS in-house production system. \texttt{AMS-\TeX} users will find that \texttt{AMS-L\TeX} is the same as \texttt{AMS-\TeX} with additional commands to simplify the typesetting of mathematics, and users of plain \TeX should have the foundation for learning \texttt{AMS-L\TeX}.

Authors may retrieve an author package for \textit{Proceedings of the AMS} from \url{www.ams.org/proc/procauthorpac.html} or via FTP to \url{ftp.ams.org} (login as \texttt{anonymous}, enter your complete email address as password, and type \texttt{cd pub/author-info}). The \textit{AMS Author Handbook} and the \textit{Instruction Manual} are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to \texttt{tech-support@ams.org} or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify \texttt{AMS-L\TeX} or \texttt{AMS-\TeX} and the publication in which your paper will appear. Please be sure to include your complete email address.

\textbf{After acceptance.} The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at \url{www.ams.org/submit-book-journal}, sent via email to \texttt{pub-submit@ams.org}, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

\textbf{Electronic graphics.} Comprehensive instructions on preparing graphics are available starting from \url{www.ams.org/authors/journals.html}. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15\% and 85\%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10\%.

\textbf{AMS policy on making changes to articles after posting.} Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of
the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata article. The errata article will appear in a future print issue and will link back and forth on the Web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
