A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Zhicong Lin, On the descent polynomial of signed multipermutations ........................................... 3671
Shigeo Koshitani and Britta Späth, Clifford theory of characters in induced blocks .................................................. 3687
Kenta Ueyama, Noncommutative graded algebras of finite Cohen-Macaulay representation type ............................ 3703
Hsian-Yang Chen, Fusion rules among irreducible $V^\tau_{\sqrt{2}A_2}$-modules of twisted type .................. 3717
Julia Pevtsova and Sarah Witherspoon, Tensor ideals and varieties for modules of quantum elementary abelian groups ................................................................. 3727
Emre Alkan, Special values of the Riemann zeta function capture all real numbers ............................ 3743
Yoshinori Mishiba, Algebraic independence of the Carlitz period and the positive characteristic multizeta values at $n$ and $(n,n)$ ....................................................... 3753
Xianzu Lin, Fusion rules of Virasoro vertex operator algebras .................................................. 3765
Takuma Aihara and Ryo Takahashi, Endofunctors of singularity categories characterizing Gorenstein rings ................................................................. 3777
E. I. Khukhro and P. Shumyatsky, On the length of finite groups and of fixed points ......................... 3781

B. ANALYSIS

David Seifert, Some improvements of the Katznelson-Tzafriri theorem on Hilbert space .................................................. 3827
Ron Kerman, Rastislav Oľhava, and Susanna Spektor, An asymptotically sharp form of Ball’s integral inequality ................................................................. 3839
A. I. Aptekarev, A. Draux, V. A. Kalyagin, and D. N. Tulyakov, Asymptotics of sharp constants of Markov-Bernstein inequalities in integral norm with Jacobi weight ................................................................. 3847
Marius Lemm, New counterexamples for sums-differences ................................................................. 3863
B. T. Bilalov and S. R. Sadigova, On $\mu$-statistical convergence ................................................................. 3869
Lyle Noakes and Luchezar Stoyanov, Rigidity of scattering lengths and travelling times for disjoint unions of strictly convex bodies ................................................................. 3879
Lawrence G. Brown, Some Directed Subsets of $C^*$-algebras and Semicontinuity Theory ................................................................. 3895
Florian Bertrand and Hervé Gaussier, Gromov hyperbolicity of strongly pseudoconvex almost complex manifolds ................................................................. 3901
Edward Bierstone, Pierre D. Milman, and Guillaume Valette, Arc-quasianalytic functions ................................................................. 3915
Jeroen S. W. Lamb, Martin Rasmussen, and Christian S. Rodrigues, Topological bifurcations of minimal invariant sets for set-valued dynamical systems ................................................................. 3927
András Kroó, On multiple extremal problems ................................................................. 3939
Evgeny Korotyaev and Natalia Saburova, Spectral band localization for Schrödinger operators on discrete periodic graphs 3951
Mohameden Ould Ahmedou and Angela Pistoia, On the supercritical mean field equation on pierced domains 3969
Alexander M. Blokh, Pointwise-recurrent maps on uniquely arcwise connected locally arcwise connected spaces 3985
Miguel Paternain, Periodic orbits with prescribed abbreviated action 4001
Guanghao Hong, The singular homogeneous solutions to one phase free boundary problem 4009
Lyudmila Korobenko, Diego Maldonado, and Cristian Rios, From Sobolev inequality to doubling 4017

D. GEOMETRY

Fangwei Chen, Wenxue Xu, and Congli Yang, Rogers and Shephard inequality for the Orlicz difference body 4029
Stephan Wiesendorf, A note on inhomogeneous foliations with sections 4041

E. LOGIC AND FOUNDATIONS

Sean D. Cox, Prevalence of Generic Laver Diamond 4045
Mingzhong Cai, Another note on the join property 4059

F. STATISTICS AND PROBABILITY

Davar Khoshnevisan and Kunwoo Kim, Non-linear noise excitation and intermittency under high disorder 4073
Mohammud Foondun and Rana D. Parshad, On non-existence of global solutions to a class of stochastic heat equations 4085
Luigi Accardi and Andreas Boukas, Fourier transform of random variables associated with the multi-dimensional Heisenberg Lie algebra 4095

G. TOPOLOGY

Alexander Kolpakov, Bruno Martelli, and Steven Tschantz, Some hyperbolic three-manifolds that bound geometrically 4103
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for \texttt{AMSS-\LaTeX}.

Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/proc.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at \url{www.ams.org/submission/proc} or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from \url{www.ams.org/msc/}. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from \url{www.ams.org/msnhtml/serials.pdf}. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at \url{www.ams.org/mrlookup/}.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in AMSS-\LaTeX. To this end, the Society has prepared AMSS-\LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the AMSS-\LaTeX style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for Proceedings of the AMS from \url{www.ams.org/proc/procauthorpac.html} or via FTP to ftp.ams.org (login as anonymous, enter your complete email address as password, and type \texttt{cd pub/author-info}). The AMS Author
Handbook and the Instruction Manual are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

**After acceptance.** The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/authors/journals.html](http://www.ams.org/authors/journals.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

**AMS policy on making changes to articles after publication.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
