Shalini Bhattacharya and Eknath Ghate, Supercuspidal ramification of modular endomorphism algebras ................................. 4669
Bo He, Ákos Pintér, and Alain Togbé, On simultaneous Pell equations and related Thue equations ............................................. 4685
Tommy Wuxing Cai and Richard P. Stanley, The Smith normal form of a matrix associated with Young’s lattice ............................. 4695
Piotr Pragacz, A Gysin formula for Hall-Littlewood polynomials ........ 4705
József Balogh, Hong Liu, Maryam Sharifzadeh, and Andrew Treglown, The number of maximal sum-free subsets of integers ............. 4713
Moon Duchin, Hao Liang, and Michael Shapiro, Equations in nilpotent groups ................................................................. 4723
Moshe Goldberg and Thomas J. Laffey, On the radius in Cayley–Dickson algebras ................................................................. 4733

B. ANALYSIS

Edward Odell and Ricardo V. Teixeira, On \(S_1\)-strictly singular operators ... 4745
J. N. Pandey and S. K. Upadhyay, The continuous wavelet transform and window functions ......................................................... 4759
Ilkka Törmä, Quantifier extensions of multidimensional sofic shifts ........ 4775
R. de la Bretèche and G. Tenenbaum, Dérivabilité ponctuelle d’une intégrale liée aux fonctions de Bernoulli ................................. 4791
Guixiang Hong, The behaviour of square functions from ergodic theory in \(L^\infty\) . 4797
Nikolaos S. Papageorgiou and Vicențiu D. Rădulescu, Neumann problems with indefinite and unbounded potential and concave terms ........ 4803
Zhiqiang Wang and Fengying Li, A note on the two nested regular polygonal central configurations ............................................... 4817
György Pál Gehér, Asymptotic limits of operators similar to normal operators 4823
Michal Kraus, On the equivalence between coarse and uniform embeddability of quasi-Banach spaces into a Hilbert space .................... 4835
V. P. Fonf, R. J. Smith, and S. Troyanski, Boundaries and polyhedral Banach spaces ............................................................. 4845
D. GEOMETRY

Andreas Paffenholz, Finiteness of the polyhedral Q-codegree spectrum 4863
Matthew Gill and Daniel Smith, The behavior of the Chern scalar curvature under the Chern-Ricci flow 4875
Xiaodong Wang, On the isoperimetric constant of symmetric spaces of noncompact type 4885
Mijia Lai, A remark on the nonnegativity of the Paneitz operator 4893
Gabriele Bianchi and Michael Kelly, A Fourier analytic proof of the Blaschke-Santaló Inequality 4901
Yuntao Zhang, Open manifolds with asymptotically nonnegative Ricci curvature and large volume growth 4913
Wenxue Xu, Jiazu Zhou, and Baocheng Zhu, On Bonnesen-type inequalities for a surface of constant curvature 4925

E. LOGIC AND FOUNDATIONS

˝Ozcan Kasal and David Pierce, Chains of theories and companionability 4937
Jan Krajíˇcek, A reduction of proof complexity to computational complexity for AC^0[p] Frege systems 4951

F. STATISTICS AND PROBABILITY

Thomas Cass and Christian Litterer, A gradient estimate for the heat semigroup without hypoellipticity assumptions 4967

G. TOPOLOGY

Gregory R. Conner, Wolfram Hojka, and Mark Meilstrup, Archipelago groups 4973
A. Tempelman, Pointwise ergodic theorems for bounded Lamperti representations of amenable groups 4989
Arunima Ray, Satellite operators with distinct iterates in smooth concordance 5005
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for \texttt{AMS-L\TeX}.

Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/proc.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/proc or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/mbhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in \texttt{AMS-L\TeX}. To this end, the Society has prepared \texttt{AMS-L\TeX} author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the \texttt{AMS-L\TeX} style file and the \texttt{\label} and \texttt{\ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for Proceedings of the AMS from www.ams.org/proc/procauthorpac.html or via FTP to ftp.ams.org (login as anonymous, enter your complete email address as password, and type \texttt{cd pub/author-info}). The AMS Author
Handbook and the Instruction Manual are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance, the source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.
