# PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY

## CONTENTS

**Vol. 144, No. 2**  
Whole No. 680  
February 2016

### A. ALGEBRA, NUMBER THEORY, AND COMBINATORICS

Nathan Bowler and Stefan Geschke, **Self-dual uniform matroids on infinite sets** .......................................................... 459
Nicole Kroeger, **Coisotropic subalgebras of complex semisimple Lie bialgebras** . 473
Renjie Feng and Zhenan Wang, **Critical values of Gaussian SU(2) random polynomials** ......................................................... 487
Andreas F. Holmsen, Leonardo Martinez-Sandoval, and Luis Montejano, **A geometric Hall-type theorem** .......................................................... 503
Mohammad Akhtar, Tom Coates, Alessio Corti, Liana Heuberger, Alexander Kasprzyk, Alessandro Oneto, Andrea Petracci, Thomas Prince, and Ketil Tveiten, **Mirror symmetry and the classification of orbifold del Pezzo surfaces** ........................................................................................................ 513
Khalid Bou-Rabee and Yves Cornulier, **Systolic growth of linear groups** ..... 529

### B. ANALYSIS

Dimitar K. Dimitrov and Eliel J. C. dos Santos, **Asymptotic behaviour of Jacobi polynomials and their zeros** ............................. 535
Jiangang Qi, Bing Xie, and Shaozhu Chen, **The upper and lower bounds on non-real eigenvalues of indefinite Sturm-Liouville problems** ........................................................................................................ 547
Lian Duan, Lihong Huang, and Yuming Chen, **Global exponential stability of periodic solutions to a delay Lasota-Wazewska model with discontinuous harvesting** ........................................................................................................ 561
Louis Jeanjean and Humberto Ramos Quoirin, **Multiple solutions for an indefinite elliptic problem with critical growth in the gradient** .......................................................... 575
Tarakanta Nayak, **Herman rings of meromorphic maps with an omitted value** . 587
Rami Luisto, **Note on local-to-global properties of BLD-mappings** ........................................................................................................ 599
Rui Han, **Uniform localization is always uniform** ........................................ 609
Van Cyr and Bryna Kra, **The automorphism group of a shift of subquadratic growth** ........................................................................................................ 613
David Kalaj and Djordjije Vujadinović, **The solution operator of the inhomogeneous Dirichlet problem in the unit ball** ........................................................................................................ 623
Patrick Lopatto and Richard Rochberg, **Schatten-class truncated Toeplitz operators** ........................................................................................................ 637
Casey Donoven and Kenneth Falconer, **Codimension formulae for the intersection of fractal subsets of Cantor spaces** ........................................................................................................ 651
Abel Klein and C. S. Sidney Tsang, **Quantitative unique continuation principle for Schrödinger operators with singular potentials** ........................................................................................................ 665
Joonas Ilmavirta, **On Radon transforms on compact Lie groups** ............... 681
N. Anghel, **Fredholmness vs. Spectral Discreteness for first-order differential operators** ........................................................................................................ 693
Alexandre Eremenko and Alexander Fryntov, **Remarks on the Obrechkoff inequality** ........................................................................................................ 703
Michael Ruzhansky and Durvudkhan Suragan, **On Kac’s principle of not feeling the boundary for the Kohn Laplacian on the Heisenberg group** ........................................................................................................ 709
Jakub Šotola and Sergei Trofimchuk, **Construction of minimal non-invertible skew-product maps on 2-manifolds** ........................................................................................................ 723
Tuomo Ojala and Tapio Rajala, A function whose graph has positive doubling measure ................................................................. 733
Aeryeong Seo, Proper holomorphic polynomial maps between bounded symmetric domains of classical type ........................................ 739

C. APPLIED MATHEMATICS

Pengzi Miao and Luen-Fai Tam, Evaluation of the ADM mass and center of mass via the Ricci tensor ............................................................ 753

D. GEOMETRY

Apostolos Giannopoulos, Eleftherios Markessinis, and Antonis Tsolomitis, Remarks on an inequality of Rogers and Shephard .................. 763
Arnaud Marsiglietti, On the improvement of concavity of convex measures .... 775
Alexander Koldobsky, Slicing inequalities for subspaces of $L_p$ .......................... 787
Imre Bárány, Daniel Hug, and Rolf Schneider, Affine diameters of convex bodies .................................................................................. 797
Simone Calamai and David Petrecca, On Calabi extremal Kähler-Ricci solitons ............................................................................. 813
William Wylie, Some curvature pinching results for Riemannnian manifolds with density ................................................................. 823

E. LOGIC AND FOUNDATIONS

Taras Banakh, Robert Ralowski, and Szymon Żeberski, Classifying invariant $\sigma$-ideals with analytic base on good Cantor measure spaces .......... 837
Harvey Friedman and Florian Pelupessy, Independence of Ramsey theorem variants using $\varepsilon_0$ ............................................................... 853
James Cummings and Chris Lambie-Hanson, Bounded stationary reflection 861

F. STATISTICS AND PROBABILITY

Ivan Nourdin, David Nualart, and Giovanni Peccati, Strong asymptotic independence on Wiener chaos .................................................... 875

G. TOPOLOGY

Walter D. Neumann and Anastasia Tsvietkova, Interesin geodesics and the invariant trace field of hyperbolic 3-manifolds ................................. 887
Jennifer Hom, A note on the concordance invariants epsilon and upsilon ...... 897
Shiv Prakash Patel and Dipendra Prasad, Multiplicity formula for restriction of representations of $GL_2(F)$ to $SL_2(F)$ ................................. 903
José Gabriel Carrasquel-Vera, Thomas Kahl, and Lucile Vandembroucq, Rational approximations of sectional category and Poincaré duality .... 909
Editorial Information

To be published in the Proceedings, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. Proceedings Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for $\text{AMS-\LaTeX}$. Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/proc.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/proc or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Proceedings and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in $\text{AMS-\LaTeX}$. To this end, the Society has prepared $\text{AMS-\LaTeX}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\text{AMS-\LaTeX}$ style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for Proceedings of the AMS from www.ams.org/proc/procauthorpac.html or via FTP to ftp.ams.org (login as anonymous, enter your complete email address as password, and type cd pub/author-info). The AMS Author
Handbook and the Instruction Manual are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS
   Coordinating Editor: Nimish Shah, The Ohio State University, 231 West 18th Avenue, Columbus, OH 43210 USA; e-mail: shah@math.osu.edu
   Ergodic theory and dynamical systems, Nimish Shah
   Global analysis, Guofang Wei, University of California, Santa Barbara, 552 University Road, Santa Barbara, CA 93106-3080 USA; e-mail: wei@math.ucsb.edu
   Ordinary differential equations and dynamical systems, Yingfei Yi, School of Mathematics, Georgia Institute of Technology, Atlanta, GA 30332-0001 USA; e-mail: yi@math.gatech.edu
   Partial differential equations, Joachim Krieger, École Polytechnique Fédérale de Lausanne Bâtiment des Mathématiques Station 8, CH-1015 Lausanne, Switzerland; e-mail: joachim.krieger@epfl.ch
   Representation theory and algebraic geometry, Alexander Braverman, University of Toronto, Toronto, ON, Canada; and Perimeter Institute, Waterloo, ON, Canada; e-mail: brav@math.toronto.edu

2. TOPOLOGY AND GEOMETRY
   Coordinating Editor: Michael Wolf, Rice University, P. O. Box 1892, MS 136, Houston, TX 77005-1892 USA; e-mail: mwolf@rice.edu
   Algebraic topology, Michael A. Mandell, Indiana University Bloomington, 831 E. Third Street, Bloomington, IN 47405 USA; e-mail: mmandell@indiana.edu
   Differential geometry, Lei Ni, University of California, San Diego, La Jolla, CA 92093 USA; e-mail: lni@math.ucsd.edu; lni.math.ucsd@gmail.com
   Geometric analysis, Michael Wolf
   Geometric topology, Ken Bromberg, University of Utah, Salt Lake City, Utah, USA; e-mail: bromberg@math.utah.edu
   Geometric topology and knot theory, David Futer, Temple University, Philadelphia, PA 19122, USA; e-mail: dfuter@temple.edu

3. ANALYSIS
   Coordinating Editor: Mei-Chi Shaw, University of Notre Dame, Notre Dame, IN 46556-0398 USA; e-mail: mei-chi.shaw.1@nd.edu
   Banach spaces and linear functional analysis, Thomas Schlumprecht, Texas A&M University, 3368 TAMU, College Station, TX 77843-3368 USA; e-mail: schlump@math.tamu.edu
   Geometric function theory, Jeremy Tyson, University of Illinois, 1409 W. Green Street, Urbana, IL 61801 USA; e-mail: tyson@math.uiuc.edu
   Harmonic analysis, Alexander Iosevich, University of Rochester, Rochester, NY 14627 USA; e-mail: iosevich@math.rochester.edu
   Harmonic analysis and linear partial differential equations; geometric measure theory and its applications, Svitlana Mayboroda, Department of Mathematics, University of Minnesota, Minneapolis, MN 55455 USA; e-mail: svitlana@math.umn.edu
   Microlocal analysis and spectral theory, Michael Hitrik, University of California, Los Angeles, Los Angeles, CA 90095-1555 USA; e-mail: hitrik@math.ucla.edu
**Operator algebras**, Adrian Ioana, Department of Mathematics, University of California, San Diego, La Jolla, CA 92093 USA; e-mail: aioana@math.ucsd.edu

**Operator theory and spaces of holomorphic functions**, Stephan Ramon Garcia, Pomona College, Claremont, CA 91711 USA; e-mail: stephan.garcia@pomona.edu

**Several complex variables**, Franc Forstneric, University of Ljubljana, Jadranska 19, 1000 Ljubljana, Slovenia; e-mail: franc.forstneric@fmf.uni-lj.si

---

4. ALGEBRA, NUMBER THEORY, COMBINATORICS, AND LOGIC

Coordinating Editor: Pham Huu Tiep, University of Arizona, 617 N. Santa Rita Avenue, Tucson, AZ 85721-0089 USA; e-mail: tiep@math.arizona.edu

**Algebraic and arithmetic geometry**, Lev Borisov, Rutgers University, Piscataway, NJ 08854 USA; e-mail: borisov@math.rutgers.edu

**Algebraic number theory and arithmetic geometry**, Romyar T. Sharifi, University of Arizona, 617 N. Santa Rita Avenue, Tucson, AZ 85721-0089 USA; e-mail: sharifi@math.arizona.edu

**Automorphic and modular forms**, Kathrin Bringmann, Mathematisches Institut der Universität zu Köln, Weyertal 86-90, D-50931 Köln, Germany; e-mail: kbringma@math.uni-koeln.de

**Combinatorics**, Patricia L. Hersh, North Carolina State University, Box 8205, Raleigh, NC 27695-8205 USA; e-mail: plhersh@ncsu.edu

**Commutative algebra**, Irena Peeva, Cornell University, 212 Garden Avenue, Ithaca, NY 14853 USA; e-mail: irena@math.cornell.edu

**Commutative algebra, noncommutative algebra and invariant theory**, Jerzy Weyman, University of Connecticut, Storrs, CT 06269 USA; e-mail: jerzy.weyman@uconn.edu

**Group theory**, Pham Huu Tiep

**Lie algebras and quantized enveloping algebras**, Kailash C. Misra, North Carolina State University, Box 8205, Raleigh, NC 27695-8205 USA; e-mail: misra@math.ncsu.edu

**Logic and foundations**, Mirna Džamonja, School of Mathematics, University of East Anglia, Norwich NR4 7TJ, United Kingdom; e-mail: h020@uea.ac.uk

**Number theory**, Matthew A. Papanikolas, Texas A&M University, 3368 TAMU, College Station, TX 77843-3368 USA; e-mail: map@math.tamu.edu

---

5. APPLIED MATHEMATICS, PROBABILITY, AND STATISTICS

Coordinating Editor: Mark M. Meerschaert, Department of Probability and Statistics, Michigan State University, East Lansing, MI 48823 USA; e-mail: mcubed@stt.msu.edu

**Applied probability and statistics**, David Levin, University of Oregon, Eugene, OR 97403-1221 USA; e-mail: dlevin@uoregon.edu

**Integrable systems and special functions**, Sergei K. Suslov, School of Mathematical and Statistical Sciences, Arizona State University, Tempe, AZ 85287-1807 USA; e-mail: suslov@math.la.asu.edu

**Nonlinear partial differential equations**, Catherine Sulem, University of Toronto, 40 St. George Street, Bahen Center, Toronto, ON, Canada M5S 2E4; e-mail: sulem@math.toronto.edu

**Probability**, Mark M. Meerschaert

**Special functions and approximation theory**, Walter Van Assche, Katholieke Universiteit Leuven, Celestijnenlaan 200B, Box 2400, BE-3001 Leuven, Belgium; e-mail: walter.vanassche@wis.kuleuven.be
Alexandre Eremenko and Alexander Fryntov, Remarks on the Obrechkoff inequality ................................................................. 703
Michael Ruzhansky and Durvudkhan Suragan, On Kac’s principle of not feeling the boundary for the Kohn Laplacian on the Heisenberg group ...... 709
Jakub Šotola and Sergei Trofimchuk, Construction of minimal non-invertible skew-product maps on 2-manifolds ........................................... 723
Tuomo Ojala and Tapio Rajala, A function whose graph has positive doubling measure ............................................................... 733
Aeryeong Seo, Proper holomorphic polynomial maps between bounded symmetric domains of classical type ........................................... 739
