Shane Chern, Asymmetric Rogers–Ramanujan type identities. I. The Andrews–Uncu conjecture 3269
Jana Glivická, Ester Sgallová, and Jan Šaroch, Controlling distribution of prime sequences in discretely ordered principal ideal subrings of $\mathbb{Q}[x]$ 3281
Dennis Eichhorn, Brandt Kronholm, and Acadia Larsen, Cranks for partitions with bounded largest part 3291
Wei Xia and Zhi-Wei Sun, On congruences involving Apéry numbers 3305
Su-Ping Cui, Nancy S. S. Gu, and Chen-Yang Su, Generalizations of mock theta functions and radial limits 3317
Neil Saunders and Lewis Topley, Parabolic induction for Springer fibres 3331
Boris Pasquier and Laurent Manivel, Horospherical two-orbit varieties as zero loci 3347
Jarosław Mirek, Wojciech Stomian, and Błażej Wróbel, On the solution of Waring problem with a multiplicative error term: Dimension-free estimates 3365

B. ANALYSIS

Sergei Treil, Mixed $A_{2\to A_\infty}$ estimates of the non-homogeneous vector square function with matrix weights 3381
Jozef Bobok and Serge Troubetzkoy, Topologically weakly mixing polygonal billiards 3391
Bobo Hua, Matthias Keller, Michael Schwarz, and Melchior Wirth, Sobolev-type inequalities and eigenvalue growth on graphs with finite measure 3401
Nicolai Haydn and Matthew Nicol, Erdős-Rényi laws for exponentially and polynomially mixing dynamical systems 3415
Fangmei Sun and Hasi Wulan, The nonlinear superposition operators between some analytic function spaces 3431
Gregory Berkolaiko, James B. Kennedy, Pavel Kurasov, and Delio Mugnolo, Impediments to diffusion in quantum graphs: Geometry-based upper bounds on the spectral gap 3439
Li He, Fredholm composition operators on Hardy-Sobolev spaces with bounded reproducing kernel 3457
Jiaxing Huang and Tuen-Wai Ng, Linear $q$-difference, difference and differential operators preserving some $A$-entire functions 3469
Xiaolong He, Simultaneous conjugation of commuting foliation preserving torus maps 3481
Nonna Dzhusoeva, Mohammad Sal Moslehian, Marat Pliev, and Mikhail Popov, Operators taking values in Lebesgue–Bochner spaces 3493
Katsuhisa Mimachi, Yet another proof of Ramanujan’s \( \psi_1 \) sum 3503
Debdip Ganguly and Prasun Roychowdhury, Improved Poincaré–Hardy inequalities on certain subspaces of the Sobolev space 3513
Anselmo Raposo Jr. and Katiuscia B. Teixeira, On real-valued homogeneous polynomials with many variables 3529
Laurestine Bradford, Hannah Kohut, and Yuveshen Mooroogen, Large subsets of Euclidean space avoiding infinite arithmetic progressions 3535
Shangbing Ai, Bounded/periodic solutions for a class of scalar delay differential equations 3547

C. APPLIED MATHEMATICS
Arnaud Ducrot, Hao Kang, and Pierre Magal, A short proof for Hopf bifurcation in Gurtin-MacCamy’s population dynamics model 3561

D. GEOMETRY
Yiyue Zhang, Scalar curvature volume comparison theorems for almost rigid spheres 3577
Lei Ma, Chunna Zeng, and Yaling Wang, The log-Minkowski inequality of curvature entropy 3587

G. TOPOLOGY
Irving Dai and Maggie Miller, The 0-concordance monoid admits an infinite linearly independent set 3601
Lorenzo Ruffoni, Manifolds without real projective or flat conformal structures 3611
Sebastian Hensel and Jenya Sapir, A projection from filling currents to Teichmüller space 3621
Connor Malin, An elementary proof of the homotopy invariance of stabilized configuration spaces 3635
Editorial Information

To be published in the *Proceedings*, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication. *Proceedings* Editors solicit and encourage publication of worthy papers of length not exceeding 15 published pages. Published pages are the same size as those generated in the style files provided for *AMS-\LaTeX*.

Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/proc.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/proc or send one copy of the manuscript to the following address: Centralized Manuscript Processing, PROCEEDINGS OF THE AMS, 201 Charles Street, Providence, RI 02904-2213 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Proceedings* and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The abstract should be at least one complete sentence and at most 150 words. Included with the footnotes to the paper should be the 2020 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in *AMS-\LaTeX*. To this end, the Society has prepared *AMS-\LaTeX* author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the *AMS-\LaTeX* style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Proceedings of the AMS* from www.ams.org/proc/procauthorpac.html. The *AMS Author Handbook* is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical
Society, 201 Charles Street, Providence, RI 02904-2213 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

**After acceptance.** The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the Web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/authors/journals.html](http://www.ams.org/authors/journals.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

**AMS policy on making changes to articles after publication.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the Web through links from the manuscript tracking screen. Questions can be sent to proc-query@ams.org.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to proc-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.
Editors

The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/proc/procsubmit.html.

Managing Editor: David Futer, Temple University, Philadelphia, PA 19122 USA; e-mail: dfuter@temple.edu

1. ODE, PDE, GLOBAL ANALYSIS, AND DYNAMICAL SYSTEMS

Coordinating Editor: Ryan Hynd, University of Pennsylvania, Philadelphia, PA 19104 USA; e-mail: rhynd@math.upenn.edu

Ergodic theory and dynamical systems, Katrin Gelfert, Universidade Federal do Rio de Janeiro, Instituto de Matemática, Av. Athos da Silveira Ramos 149, Cidade Universitária, C.P. 68530, 21941-909 Rio de Janeiro, RJ, Brazil; e-mail: gelfert@im.ufrj.br

Global analysis, Lu Wang, Yale University, New Haven, CT 06511 USA; e-mail: edluwang@gmail.com

Ordinary differential equations and dynamical systems, Wenxian Shen, Auburn University, Auburn, AL 36849-5310 USA; e-mail: wenxish@auburn.edu

Partial differential equations, Ryan Hynd

Representation theory and algebraic geometry, Alexander Braverman, University of Toronto, Toronto, ON M5S 2E4, Canada; and Perimeter Institute, Waterloo, ON N2L 2Y5, Canada; e-mail: braval@math.toronto.edu

2. TOPOLOGY AND GEOMETRY

Coordinating Editor: Jiaping Wang, University of Minnesota, Minneapolis, MN 55455 USA; e-mail: jiaping@math.umn.edu

Algebraic topology, Julie Bergner, University of Virginia, Charlottesville, VA 22904 USA; e-mail: jeb2md@virginia.edu

Convex geometry, Gaoyong Zhang, Courant Institute of Mathematical Sciences, New York, NY 10012 USA; e-mail: gaoyong.zhang@nyu.edu

Differential geometry, Jiaping Wang

Geometric group theory and topology, Genevieve S. Walsh, Tufts University, Medford, MA 02155; e-mail: genevieve.walsh@tufts.edu

Geometric topology, Shelly Harvey, Rice University, Houston, TX 77251-1892 USA; e-mail: shelly@rice.edu

3. ANALYSIS

Coordinating Editor: Javad Mashreghi, Laval University, Quebec, QC G1V 0A6, Canada; e-mail: javad.mashreghi@mat.ulaval.ca

Analysis on metric spaces, Nageswari Shanmugalingam, University of Cincinnati, Cincinnati, OH 45221-0025 USA; e-mail: shanmun@uc.edu

Banach spaces, Stephen Dilworth, University of South Carolina, Columbia, SC 29208 USA; e-mail: dilworth@math.sc.edu

Harmonic analysis, Dmitriy Bilyk, University of Minnesota, Twin Cities, Minneapolis, MN 55408 USA; e-mail: dbilyk@math.umn.edu

Harmonic analysis and linear partial differential equations, Ariel Barton, University of Arkansas, Fayetteville, AR 72701 USA; e-mail: aeb019@uark.edu

Holomorphic functions, holomorphic dynamics, and several complex variables, Filippo Bracci, Università di Roma “Tor Vergata”, via della Ricerca Scientifica 1, 00133 Rome, Italy; e-mail: fbracci@mat.uniroma2.it

Operator algebras, Matthew Kennedy, University of Waterloo, Waterloo, ON N2L 3G1, Canada; e-mail: matt.kennedy@uwaterloo.ca

Function spaces and operator theory, Javad Mashreghi
Several complex variables, Harold P. Boas, Texas A&M University, College Station, TX, 77843-3368 USA; e-mail: boas@math.tamu.edu

Spectral and scattering theory, microlocal analysis, Tanya Christiansen, University of Missouri-Columbia, Columbia, MO 65211-0001 USA; e-mail: christiansent@missouri.edu

4. ALGEBRA, NUMBER THEORY, COMBINATORICS, AND LOGIC

Coordinating Editor: Amanda Folsom, Amherst College, Amherst, MA 01002 USA; e-mail: afolsom@amherst.edu

Algebraic number theory and arithmetic geometry, David Savitt, Johns Hopkins University, Baltimore, MD 21218 USA; e-mail: savitt@math.jhu.edu

Analytic number theory and modular forms, Amanda Folsom
