

ERRATUM TO "WEAKLY ALMOST PERIODIC FUNCTIONALS
ON THE FOURIER ALGEBRA"

BY

CHARLES F. DUNKL AND DONALD E. RAMIREZ

The statement and proof of Theorem 3.8 of [1] are not compatible. The theorem should read:

Theorem 3.8. *Let $\{\phi_n\} \subset \mathcal{L}^\infty(\hat{G})$. If $\{\phi_n\} \xrightarrow{n} 0$ weakly in $\mathcal{L}^\infty(\hat{G})$, then $\sup\{\|\phi_n\|_\infty\} < \infty$, and given $\epsilon > 0$ there exists a finite number of indices l_1, \dots, l_k such that for $g \in E$, $\min\{|\langle g, \phi_{l_i} \rangle|: 1 \leq i \leq k\} < \epsilon$.*

The original version has been cited, but not used, in [2, Theorem 3.7] and the paragraph before [3, Theorem 3]. To have a necessary and sufficient criterion for sequential weak convergence in $\mathcal{L}^\infty(\hat{G})$, one must make the appropriate modification of the definition of quasi-uniform convergence [1, Definition 3.2] to accommodate the proofs; that is, replace " $\min\{\|(\phi_{\lambda_i})_\alpha - \phi_\alpha\|_\infty: 1 \leq i \leq n\} < \epsilon$ for each $\alpha \in \hat{G}$ " by " $\min\{|\langle g, \phi_{\lambda_i} - \phi \rangle|: 1 \leq i \leq n\} < \epsilon$ for each $g \in E$ ".
