Transactions of the American Mathematical Society

This journal is devoted entirely to research in pure and applied mathematics.

Submission information. See Information for Authors at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Back number information. For back issues see www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. All orders must be accompanied by payment. Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Permissions to reuse portions of AMS publication content are handled by Copyright Clearance Center’s RightsLink® service. For more information, visit: www.ams.org/rightslink.

Translation rights and licensed reprint requests should be sent to: reprint-permission@ams.org.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Transactions of the American Mathematical Society (ISSN 0002-9947 (print); ISSN 1088-6850 (online)) is published monthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Transactions, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

© 2015 by the American Mathematical Society. All rights reserved.

This journal is indexed in Mathematical Reviews, Zentralblatt MATH, Science Citation Index®, Science Citation Index Expanded, ISI Alerting ServicesSM, CompuMath Citation Index®, and Current Contents®/Physical, Chemical & Earth Sciences. This journal is archived in Portico and in CLOCKSS.

Printed in the United States of America.

The paper used in this journal is acid-free and falls within the guidelines established to ensure permanence and durability.

Glen Wheeler, Global analysis of the generalised Helfrich flow of closed curves immersed in $\mathbb{R}^n$ .............................. 2263
Xiaoli Li and Dehua Wang, Global strong solution to the density-dependent incompressible flow of liquid crystals ................................. 2301
Ayato Mitsushi and Takao Yamaguchi, Collapsing three-dimensional closed Alexandrov spaces with a lower curvature bound .......... 2339
Yng-Ing Lee and Yang-Kai Lue, The stability of self-shrinkers of mean curvature flow in higher co-dimension ........................................ 2411
Luis Fernández, The space of almost complex 2-spheres in the 6-sphere ................................. 2437
Julie Rowlett, Pablo Suárez-Serrato, and Samuel Tapie, Dynamics and Zeta functions on conformally compact manifolds ........................................ 2459
Jingyi Chen, Ailana Fraser, and Chao Pang, Minimal immersions of compact bordered Riemann surfaces with free boundary .......... 2487
Bobo Hua and Jürgen Jost, Geometric analysis aspects of infinite semiplanar graphs with nonnegative curvature II .......................... 2509
Manuel Bodirsky and Michael Pinsker, Topological Birkhoff ................. 2527
Carlos E. Kenig and Didier Pilod, Well-posedness for the fifth-order KdV equation in the energy space ........................................ 2551
Tsukasa Iwabuchi and Takayoshi Ogawa, Ill-posedness for the nonlinear Schrödinger equation with quadratic non-linearity in low dimensions ................................. 2551
Valentina Casarino and Marco M. Peloso, Strichartz estimates for the Schrödinger equation for the sublaplacian on complex spheres .............. 2631
Lawrence A. Fialkow, Limits of positive flat bivariate moment matrices ........................................ 2665
Jon F. Carlson and Srikanth B. Iyengar, Thick subcategories of the bounded derived category of a finite group ........................................ 2703
Kôhei Uchiyama, Asymptotics of the densities of the first passage time distributions for Bessel diffusions ........................................ 2719
Michał Adamaszek and Jan Hladký, Dense flag triangulations of 3-manifolds via extremal graph theory ........................................ 2743
Karel Dekimpe and Nansen Petrosyan, Crystallographic actions on contractible algebraic manifolds ........................................ 2765
Giovanni Cerulli Irelli, Daniel Labardini-Fragoso, and Jan Schröer, Caldero-Chapoton algebras ........................................ 2787
Anton Evseev, Generalised Cartan invariants of symmetric groups ............. 2823
Madhusudan Manjunath, Frank-Olaf Schreyer, and John Wilmes, Minimal free resolutions of the $G$-parking function ideal and the toppling ideal ........................................ 2853
Yuya Koda and Makoto Ozawa, contributor Cameron Gordon, Essential surfaces of non-negative Euler characteristic in genus two handlebody exteriors ........................................ 2875
Edward S.T. Fan, contributor M. Flach, A note on the cohomology of the Langlands group ........................................ 2905
Amru Hussein, David Krejčířík, and Petr Siegl, Non-self-adjoint graphs ........................................ 2921
Qingtao Chen and Fei Han, Mod 3 congruence and twisted signature of 24 dimensional string manifolds ........................................... 2959
Patrick Gérard and Sandrine Grellier, An explicit formula for the cubic Szegő equation .................................................. 2979
Marcus Zibrowius, KO-rings of full flag varieties .............................. 2997
Editorial Information

To be published in the Transactions, a paper must be correct, new, nontrivial, and significant. Further, it must be well written and of interest to a substantial number of mathematicians. Piecemeal results, such as an inconclusive step toward an unproved major theorem or a minor variation on a known result, are in general not acceptable for publication.

Papers submitted to the Transactions should be 15 or more published journal pages in length. Shorter papers may be submitted to the Proceedings of the American Mathematical Society. Published pages are the same size as those generated in the style files provided for \texttt{AMS-\LaTeX}.

Information on the backlog for this journal can be found on the AMS website starting from http://www.ams.org/tran.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the reviewers are. The AMS uses Centralized Manuscript Processing for initial submissions. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/tran, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, TRANSACTIONS OF THE AMS, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for Transactions and include the name of the corresponding author, contact information such as email address or mailing address, and the name of an appropriate Editor to review the paper (see the list of Editors below).

The first page of an article must consist of a descriptive title, followed by an abstract that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The descriptive title should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The abstract should be at least one complete sentence, and at most 300 words. Included with the footnotes to the paper should be the 2010 Mathematics Subject Classification representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of key words and phrases describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest Mathematical Reviews annual index. The series abbreviations are also accessible from www.ams.org/msnhtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.
**Electronically prepared manuscripts.** Manuscripts should be electronically prepared in **AMS-LaTeX**. To this end, the Society has prepared **AMS-LaTeX** author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the **AMS-LaTeX** style file and the \texttt{\textbackslash label} and \texttt{\textbackslash ref} commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Transactions of the AMS* from [www.ams.org/tran/tranauthorpac.html](http://www.ams.org/tran/tranauthorpac.html) or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as anonymous, enter your complete email address as password, and type cd pub/author-info). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org, or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

**After acceptance.** The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/authors/journals.html](http://www.ams.org/authors/journals.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

**AMS policy on making changes to articles after publication.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published
articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information such as affiliation, current address, and email address up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to tran-query@ams.org.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to tran-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
The AMS uses Centralized Manuscript Processing for initial submissions to AMS journals. Authors should follow instructions listed on the Initial Submission page found at www.ams.org/tran/transubmit.html.

Editors

Algebra, MICHAEL LARSEN, Department of Mathematics, Rawles Hall, Indiana University, 831 E 3rd St., Bloomington, IN 47405 USA; e-mail: mjlar@indiana.edu

MEMOIRS OF THE AMERICAN MATHEMATICAL SOCIETY

Memoirs is devoted to research in pure and applied mathematics of the same nature as Transactions. An issue consists of one or more separately bound research tracts for which the authors provide reproduction copy. Papers intended for Memoirs should normally be at least 80 pages in length. Memoirs has the same editorial committee as Transactions; authors may choose an Editor from the list above upon submission.
Yuya Koda and Makoto Ozawa, contributor Cameron Gordon,
Essential surfaces of non-negative Euler characteristic in genus two handlebody exteriors ................................................................. 2875
Edward S.T. Fan, contributor M. Flach, A note on the cohomology of the Langlands group ................................................................. 2905
Amru Hussein, David Krejčířík, and Petr Siegl, Non-self-adjoint graphs ....................................................................................... 2921
Qingtao Chen and Fei Han, Mod 3 congruence and twisted signature of 24 dimensional string manifolds .................................................. 2959
Patrick Gérard and Sandrine Grellier, An explicit formula for the cubic Szegő equation ................................................................. 2979
Marcus Zibrowius, KO-rings of full flag varieties ............................... 2997
Glen Wheeler, Global analysis of the generalised Helfrich flow of closed curves immersed in $\mathbb{R}^n$ ................................................................. 2263
