364.—K. Pearson, *On the Construction of Tables and on Interpolation. Part I. Uni-variate Tables. Tracts for Computers*, No. 2, Cambridge University Press, London, 1920.

In addition to corrections already published [1], the following should be made: on p. 28, in the formula for $z_{.4}$, the coefficient of z_2 should read $-.078414336$ instead of $-.078414366$; and on p. 29, the ordinates at the ends of the first lines of the formulas for $z_{2.5}$ and $z_{3.5}$ should each read z_{-1} instead of z_1.

CORRIGENDA

Henry E. Fettis, "On the numerical solution of equations of the Abel type," *Math. Comp.*, v. 18, 1964, p. 491–496.

In Appendix 1, Table A1 (p. 496), the value of H_6 for $n = 6$ should be .09435 06728, and the value of H_7 for $n = 7$ should be .07023 89207.

Jet Wimp, "Polynomial expansions of Bessel functions and some associated functions," *Math. Comp.*, v. 16, 1962, p. 446–458.

On p. 456, the exponent for $B_1^{(-1/4)}$ should be $(+01)$ instead of $(+00)$.

D. H. Lehmer, "Recent discoveries of large primes," *MTAC*, v. 6, 1952, p. 61, Note 131.

In the enumeration of values of k for which $1 + k(2^{127} - 1)$ is prime, *for* 744, *read* 774. The latter appears correctly in the note by J. C. P. Miller entitled "Large primes" in *Eureka*, no. 14, 1951, p. 10–11, which was cited in the present note.

It was found, incidentally, that the number corresponding to $k = 744$ is divisible by 47.

NOTE

New Journal

In May 1964 there was published by Gordon and Breach, Science Publishers, of 150 Fifth Ave., New York, and 171 Strand, London W.1 a new periodical entitled *International Journal of Computer Mathematics*, which is devoted to the publication of papers on mathematical techniques of interest to computer users in the fields of Numerical Analysis, Operations Research, Automation, Econometrics, Mathematical Logic, and Communication. According to the inside cover, this journal is
