SUBSCRIPTION INFORMATION: MATHEMATICS OF COMPUTATION is published quarterly, with issues numbered serially since Volume 1, Number 1. Subscription prices for Volumes 44 and 45 (1985) are \$150.00 list; \$120.00 institutional member; \$98.00 member of CBMS organizations; \$90.00 individual AMS member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of \$5.00; subscribers in India must pay a postage surcharge of \$10.00. Combination paper and microfiche subscription prices are \$200.00 list; \$160.00 institutional member. Microfiche of each issue will be mailed the fastest way before the issue is mailed by the printer.

BACK NUMBER INFORMATION: Back number prices *per volume* are for Volumes 1-21, \$80.00 list, \$64.00 member; for Volumes 22-33, \$120.00 list, \$96.00 member; for Volumes 34-43, \$80.00 list, \$64.00 member. Back volumes may be purchased on microfilm or microfiche from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106.

UNPUBLISHED MATHEMATICAL TABLES: The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section *Reviews and Descriptions of Tables and Books*. Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page. All tables and correspondence concerning the UMT should be sent to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, IN 47907.

Orders for subscriptions and publications of the American Mathematical Society should be addressed to the AMS, P.O. Box 1571, Annex Station, Providence, RI 02901-1571. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940.

MATHEMATICS OF COMPUTATION is published quarterly by the American Mathematical Society, 201 Charles Street, Providence, RI 02904. Second-class postage is paid at Providence, Rhode Island, and additional mailing offices. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P.O. Box 6248, Providence, RI 02940.

Supplement to "Linear Multistep Methods for Volterra Integral and Integro- Differential Equations" by P. J. van der Houwen and H. J. J. te Riele ..	S21

Information for Contributors

Manuscripts should be typewritten double-spaced in the format used by the journal. For journal abbreviations, see the latest *Mathematical Reviews* volume index. An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in "A Manual for Authors of Mathematical Papers," which is available from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office. Institutions sponsoring research reported in the journal are assessed page and microfiche charges.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract, and by 1980 *Mathematics Subject Classification* (1985 Revision) numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the 1984 Subject Index to Mathematical Reviews.

The research journals of the American Mathematical Society carry a page charge of \$50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author's paper for publication dependent upon payment of the page charge.

Copying and Reprinting

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner's consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the fee of \$1.00 plus \$.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

The T_EXbook

Donald E. Knuth

This is a guide to computer typesetting using T_EX written by the system's creator. T_EX represents the state-of-the-art in computer typesetting. It is particularly valuable where the article, document, or book to be produced contains a lot of mathematical notation where the user is concerned with the quality of the mathematical displays. T_EX software offers both writers and publishers the opportunity to produce technical text with the speed and efficiency of a computer system. Novice and expert alike will gain from The T_EXbook the level of information they seek. T_EX contains the detail required for pre-

paring complex mathematics once a user has become experienced.

Special and Spurious Solutions of

$$\dot{x}(t) = -\alpha f(x(t-1))$$

Roger D. Nussbaum and Heinz-Otto Peitgen

Differential delay equations of the type $\dot{x}(t) = -\alpha f(x(t-1))$ have become an important tool in modelling various kinds of problems in biology, chemistry and physics. Particular interest is in the existence and nature of periodic solutions. This memoir investigates a special class of such periodic solutions which exhibit certain symmetries by means of topological perturbation techniques. Moreover it is devoted to the existence and explanation of 'spurious solutions'. These are

numerical solutions which are perfect solutions of the chosen numerical scheme but which are by no means approximative solutions. This phenomenon is visualized by the aid of computer graphical experiments and explained by the underlying homoclinic structure.

Elliptic Boundary Value Problems

AMS TRANSLATIONS, SERIES 2

This volume contains seven papers translated from the Russian on the topic of elliptic boundary value problems.

Contents

- V. G. Maz'ya and B. A. Plamenevskii. *Estimates in L_p and in Hölder classes and the Miranda-Agmon maximum principle for solutions of elliptic boundary value problems in domains with singular points on the boundary*
- . *On the coefficients in the asymptotics of solutions of elliptic boundary value problems in domains with conical points*
- . *Weight spaces with inhomogeneous norms and boundary value problems in domains with conical points*
- . *On properties of solutions of three-dimensional problems of elasticity theory and hydrodynamics in domains with isolated singular points*

- V. G. Maz'ya, B. A. Plamenevskii and N. F. Morozov. *On nonlinear bending of a plate with a crack*
- V. G. Maz'ya and B. A. Plamenevskii. *Schauder estimates of solutions of elliptic boundary value problems in domains with edges on the boundary*
- V. G. Maz'ya, B. A. Plamenevskii and L. Stupyaus [Stupeus]. *The three-dimensional problem of steady-state motion of a fluid with a free boundary*

Fluid Dynamics in Astrophysics and Geophysics

Norman R. Lebovitz, Editor

LECTURES IN APPLIED MATHEMATICS, VOLUME 20

This book features two main articles on geophysical fluid dynamics and on astrophysical fluid dynamics (by Rhines and Schutz, respectively), some timely articles on currently interesting topics in these areas, and a couple of articles on mathematical methods which are finding applications in these two areas of science.

The hope is that the juxtaposition of these two fields of application of fluid dynamics will help to expose their common foundations and methods, and open up their problem areas to a wider scientific community.

Applied mathematicians interested in acquiring a background in astro- or geophysics, and who want to understand the areas common to these two disciplines, will find these papers illuminating.

Contents

I. Geophysical fluid dynamics

Peter B. Rhines, *Lectures on geophysical fluid dynamics*

Larry G. Redekopp, *Nonlinear waves in geophysics: long internal waves*

P. Huerre and L. G. Redekopp, *Nonlinear evolution equations and critical layers*

II. Astrophysical fluid dynamics

B. F. Schutz, *Problems in astrophysical fluid dynamics*

Peter Bodenheimer, *Protostar collapse*

C. Hunter, *Galactic dynamics*

III. Mathematical technique

D. H. Sattinger, *Bifurcation from spherical symmetry*

John Guckenheimer, *An introduction to chaotic motion and strange attractors*

J. L. Bona, W. G. Pritchard and L. R. Scott, *A comparison of solutions of two model equations for long waves*

Large-Scale Computations in Fluid Mechanics

Bjorn E. Engquist, Stanley Osher and Richard C. J. Somerville, Editors

This is the proceedings of an AMS-SIAM Summer Seminar on Applied Mathematics held at Scripps Institution of Oceanography in 1983, whose purpose was to bring scientists interested in computational fluid mechanics together with numerical analysts and mathematicians working in large-scale computations. The complexity of many contemporary problems of fluid mechanics is so great as to tax the capabilities of present-day computers. There is a real need and opportunity for numerical analysis to aid research on the physical problems of achieving optimal utilization of current computers.

Fifty lectures were given on subjects equally divided between mathematics and applications. The numerical modeling included geophysical problems of the atmosphere, ocean, and interior of the earth, and planetary, solar, and stellar atmospheres. Applications ranged from idealized turbulence in laboratory convection models to operational weather prediction. Engineering applications included aerodynamics, combustion, and flow in porous media. Recent advances in numerical analysis which have applications to these problems were stressed. These include shock capturing algorithms, spectral methods, boundary treatments, vortex methods, and parallel computing.

In addition to specialized research lectures, several speakers gave talks surveying important areas of numerical analysis and computational fluid dynamics.

Environmental and Natural Resources Mathematics

Robert McKelvey, Editor

(Proceedings of Symposia in Applied
Mathematics. AMS Short Course Lecture
Notes. Volume 32)

The lectures and the panel discussion held at
this 1984 AMS short course explored the role
mathematicians and mathematically trained
scientists have played in the development of
natural resource modelling. The techniques
of mathematical modelling have contributed
to the establishment of a coherent theory
of efficient and conservative management of
geologic, atmospheric and biologic resources.
The discussion also considered how these
techniques might be incorporated into graduate
and undergraduate mathematics education.
