SUBSCRIPTION INFORMATION: MATHEMATICS OF COMPUTATION is published quarterly, with issues numbered serially since Volume 1, Number 1. Subscription prices for Volumes 46 and 47 (1986) are \$164.00 list; \$131.00 institutional member; \$107.00 member of CBMS organizations; \$98.00 individual AMS member. A late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year. Subscribers outside the United States and India must pay a postage surcharge of \$8.00; subscribers in India must pay a postage surcharge of \$18.00. Combination paper and microfiche subscription prices are \$218.00 list; \$174.00 institutional member. Microfiche of each issue will be mailed the fastest way before the issue is mailed by the printer.

BACK NUMBER INFORMATION: Back number prices *per volume* are for Volumes 1–21, \$80.00 list, \$64.00 member; for Volumes 22–33, \$120.00 list, \$96.00 institutional member; for Volumes 34–43, \$80.00 list, \$64.00 institutional member; Volumes 44–45, \$113.00 list, \$90.00 institutional member. Back volumes may be purchased on microfilm or microfiche from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106.

UNPUBLISHED MATHEMATICAL TABLES: The editorial office of the journal maintains a repository of Unpublished Mathematical Tables (UMT). When a table is deposited in the UMT repository a brief summary of its contents is published in the section *Reviews and Descriptions of Tables and Books*. Upon request, the chairman of the editorial committee will supply copies of any table for a nominal cost per page. All tables and correspondence concerning the UMT should be sent to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, IN 47907.

Orders for subscriptions and publications of the American Mathematical Society should be addressed to the AMS, P.O. Box 1571, Annex Station, Providence, RI 02901-1571. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940.

MATHEMATICS OF COMPUTATION is published quarterly by the American Mathematical Society, 201 Charles Street, Providence, RI 02904. Second-class postage is paid at Providence, Rhode Island, and additional mailing offices. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, P.O. Box 6248, Providence, RI 02940.

Supplement to “Computation of All the Amicable Pairs Below 10^{10}” by H. J. J. te Riele	S9

Information for Contributors

Authors are encouraged to prepare articles electronically with the AMS-TeX software package in the AMS pre-print style and to provide the article in this electronic form for typesetting. While this procedure may not reduce the interval between submission and publication of an article, generally much more accurate copy will be returned for proofreading. Production time for manuscripts prepared with other systems, even TeX itself without AMS-TeX, currently prevents cost-effective use of the existing electronic form. Before sending an AMS-TeX manuscript for typesetting, contact the AMS Composition Department for details.

Manuscripts prepared by some means other than AMS-TeX should be double-spaced and produced in the format used by the journal. For journal abbreviations, see the latest *Mathematical Reviews* volume index. An author should submit the original and two copies of the manuscript and retain one copy. The author may suggest an appropriate editor for his paper. It is recommended that the author acquaint himself with the pertinent material contained in “A Manual for Authors of Mathematical Papers,” which is available from the American Mathematical Society. All contributions intended for publication and all books for review should be addressed to Walter Gautschi, Chairman, Editorial Committee, Mathematics of Computation, Department of Computer Sciences, Purdue University, West Lafayette, Indiana 47907. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Chairman of the Editorial Committee, and it is the responsibility of the author to submit manuscripts directly to this office. Institutions sponsoring research reported in the journal are assessed page and microfiche charges.

Each article submitted for publication must be accompanied by a brief and reasonably self-contained abstract, and by 1980 *Mathematics Subject Classification* (1985 *Revision*) numbers. If a list of key words and phrases is included, it will be printed as a footnote on the first page. A list of the classification numbers may be found in the 1984 Subject Index to *Mathematical Reviews*.

The research journals of the American Mathematical Society carry a page charge of \$50.00 per page to help defray the cost of publication. This amount is charged to the institution or to a contract supporting the research reported in the published paper. The publication charge policy of the United States Federal Council for Science and Technology (FCST) is reported on page 112 of the February, 1975 issue of the NOTICES of the American Mathematical Society. In no case is the author personally responsible for paying the page charge, nor is acceptance of the author’s paper for publication dependent upon payment of the page charge.

Copying and Reprinting

Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews provided the customary acknowledgement of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication (including abstracts) is permitted only under license from the American Mathematical Society. Requests for such permission should be addressed to the Executive Director, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02940.

The appearance of the code on the first page of an article in this journal indicates the copyright owner’s consent for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law, provided that the fee of \$1.00 plus \$.25 per page for each copy be paid directly to Copyright Clearance Center, Inc., 21 Congress Street, Salem, Massachusetts 01970. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotion purposes, for creating new collective works, or for resale.

"The articles in these two volumes cover an enormous range of numerical methods and an equally vast range of scientific applications... The volumes are indispensable to anyone who wishes to become acquainted with modern practices of large-scale computations."

- Peter D. Lax, New York University

LARGE-SCALE COMPUTATIONS IN FLUID MECHANICS

Bjorn E. Engquist, Stanley Osher and Richard C. J. Somerville, Editors

The purpose of the AMS-SIAM Summer Seminar on Applied Mathematics held at Scripps in 1983 was to bring together scientists interested in computational fluid mechanics and numerical analysts and mathematicians working in large-scale computations.

The numerical modeling included geophysical problems of the atmosphere, ocean, and interior of the earth, and planetary, solar, and stellar atmospheres. Applications ranged from idealized turbulence in laboratory convection models to operational weather prediction. Engineering applications included aerodynamics, combustion, and flow in porous media. Recent advances in numerical analysis which have applications to these problems were stressed. These include shock capturing algorithms, spectral methods, boundary treatments, vortex methods, and parallel computing.

PARTICLE SYSTEMS, RANDOM MEDIA AND LARGE DEVIATIONS

Richard Durrett, Editor

"The book is an excellent introduction to the exciting recent developments which combine ideas from physics with mathematical techniques from the theory of probability."

- Frank L. Spitzer
Cornell University

This volume of proceedings of the 1984 AMS Summer Research Conference *The Mathematics of Phase Transitions* provides a handy summary of results from some of the most exciting areas in probability theory today: interacting particle systems, percolation, random media (bulk properties and hydrodynamics), the Ising model and large deviations. Thirty-seven mathematicians, many of them well-known probabilists, collaborated to produce this readable introduction to the main results and unsolved problems in the field. In fact, it is one of the very few collections of articles yet to be published on these topics. To appreciate many of the articles, an undergraduate course in probability is sufficient. The book will be valuable to probabilists, especially those interested in mathematical physics and to physicists interested in statistical mechanics or disordered systems.

The Joy of T_EX

A Gourmet Guide to Typesetting with the $\mathcal{A}\mathcal{M}\mathcal{S}$ -T_EX macro package

M. D. SPIVAK, Ph.D.

The Joy of T_EX is the user-friendly user's guide for $\mathcal{A}\mathcal{M}\mathcal{S}$ -T_EX, an extension of T_EX, Donald Knuth's revolutionary program for typesetting technical material. $\mathcal{A}\mathcal{M}\mathcal{S}$ -T_EX was designed to simplify the input of mathematical material in particular, and to format the output according to any of various preset style specifications.

There are two primary features of the T_EX system: it is a computer system for typesetting technical text, especially text containing a great deal of mathematics; and it is a system for producing beautiful text, comparable to the work of the finest printers.

Most importantly, T_EX's capabilities are not available only to T_EXperts. While mathematicians and experienced technical typists will find that T_EX allows them to specify mathematical formulas with greater accuracy and still have great control over

the finished product, even novice technical typists will find the manual easy to use in helping them produce beautiful technical T_EXt.

This book is designed as a user's guide to the $\mathcal{A}\mathcal{M}\mathcal{S}$ -T_EX macro package and details many features of this extremely useful text processing package. Parts 1 and 2, entitled "Starters" and "Main Courses," teach the reader how to typeset most normally encountered text and mathematics. "Sauces and Pickles," the third section, treats more exotic problems and includes a 60-page dictionary of special T_EXniques.

Exercises sprinkled generously through each chapter encourage the reader to sit down at a terminal and learn through experimentation. Appendixes list summaries of frequently used and more esoteric symbols as well as answers to the exercises.
