Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, with emphasis on the mathematical analysis and development of methods, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to e-MATH. Articles are posted to e-MATH individually soon after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/publications/. Subscription prices for Volume 69 (2000) are as follows: for paper delivery, \$345 list, \$276 institutional member, \$311 corporate member, \$224 member of CBMS organizations; \$207 individual member; for electronic delivery, \$311 list, \$249 institutional member, \$280 corporate member, \$202 member of CBMS organizations, \$187 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$12 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$56.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant to the Publisher, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

INDEX TO VOLUME 69 (2000)

- Aliaga, J. I., Boley, D. L., Freund, R. W., and Hernández, V. *A Lanczos-type method for multiple starting vectors*, 1577
- Babuška, Ivo, and Osborn, John E. *Can a finite element method perform arbitrarily badly?*, 443
- Badea, Lori, and Wang, Junping. *An additive Schwarz method for variational inequalities*, 1341
- Bays, Carter, and Hudson, Richard H. *Zeroes of Dirichlet L-functions and irregularities in the distribution of primes*, 861
- . *A new bound for the smallest x with $\pi(x) > \text{li}(x)$* , 1285
- Beattie, Christopher. *Galerkin eigenvector approximations*, 1409
- Belabas, Karim. *See Browkin, Jerzy*
- Boffi, Daniele, Brezzi, Franco, and Gastaldi, Lucia. *On the problem of spurious eigenvalues in the approximation of linear elliptic problems in mixed form*, 121
- Boley, D. L. *See Aliaga, J. I.*
- Borwein, Peter, and Mossinghoff, Michael. *Rudin-Shapiro-like polynomials in L_4* , 1157
- Bramble, James H., Pasciak, Joseph E., and Vassilev, Apostol T. *Uzawa type algorithms for nonsymmetric saddle point problems*, 667
- Bramble, James H., Pasciak, Joseph E., and Vassilevski, Panayot S. *Computational scales of Sobolev norms with application to preconditioning*, 463
- Brenner, Susanne C., and Sung, Li-Yeng. *Lower bounds for nonoverlapping domain decomposition preconditioners in two dimensions*, 1319
- Brent, R. P., Crandall, R. E., Dilcher, K., and Van Halewyn, C. *Three new factors of Fermat numbers*, 1297
- Brezzi, Franco. *See Boffi, Daniele*
- Broberg, Niklas. *Some examples related to the abc-conjecture for algebraic number fields*, 1707
- Browkin, Jerzy, with an appendix by Belabas, Karim, and Gangl, Herbert. *Computing the tame kernel of quadratic imaginary fields*, 1667
- Bultheel, A., Díaz-Mendoza, C., González-Vera, P., and Orive, R. *On the convergence of certain Gauss-type quadrature formulas for unbounded intervals*, 721
- Burie, J. B., and Marion, M. *Adaptive multilevel methods in space and time for parabolic problems—the periodic case*, 547
- Butske, William, Jaje, Lynda M., and Mayernik, Daniel R. *On the equation $\sum_{p|N} \frac{1}{p} + \frac{1}{N} = 1$, pseudoperfect numbers, and perfectly weighted graphs*, 407
- Calvetti, D., Golub, G. H., Gragg, W. B., and Reichel, L. *Computation of Gauss-Kronrod quadrature rules*, 1035
- Celledoni, Elena, and Iserles, Arieh. *Approximating the exponential from a Lie algebra to a Lie group*, 1457
- Chen, Goong, Deng, Yuanhua, Ni, Wei-Ming, and Zhou, Jianxin. *Boundary element monotone iteration scheme for semilinear elliptic partial differential equations, Part II: Quasimonotone iteration for coupled 2×2 systems*, 629
- Chou, So-Hsiang, and Li, Qian. *Error estimates in L^2 , H^1 and L^∞ in covolume methods for elliptic and parabolic problems: A unified approach*, 103
- Cohen, Henri, and Roblot, Xavier-François. *Computing the Hilbert class field of real quadratic fields*, 1229
- Couture, Raymond, and L'Ecuyer, Pierre. *Lattice computations for random numbers*, 757
- Couveignes, Jean-Marc. *Isomorphisms between Artin-Schreier towers*, 1625
- Crandall, R. E. *See Brent, R. P.*
- Dassiè, Silvia, Vianello, Marco, and Zanovello, Renato. *A new summation method for power series with rational coefficients*, 749
- Davies, E. B. *A hierarchical method for obtaining eigenvalue enclosures*, 1435
- Dedieu, J. P., and Shub, M. *Newton's method for overdetermined systems of equations*, 1099
- Dedieu, Jean-Pierre, and Shub, Mike. *Multihomogeneous Newton methods*, 1071
- Deng, Yuanhua. *See Chen, Goong*
- Deshouillers, Jean-Marc, and Hennecart, François; Landreau, Bernard; with an appendix by Purnaba, I. Gusti Putu. *7 373 170 279 850*, 421
- Díaz-Mendoza, C. *See Bultheel, A.*
- Dilcher, K. *See Brent, R. P.*
- Falk, Richard S., and Tu, Tong. *Locking-free finite elements for the Reissner-Mindlin plate*, 911
- Farhloul, M., Nicaise, S., and Paquet, L. *A mixed formulation of Boussinesq equations: Analysis of nonsingular solutions*, 965

- Floater, Michael S., and Peña, J. M. *Monotonicity preservation on triangles*, 1505
- Franchi, Bruno, and Tesi, Maria Carla. *A finite element approximation for a class of degenerate elliptic equations*, 41
- Freund, R. W. *See Aliaga, J. I.*
- Friesen, Christian. *Class group frequencies of real quadratic function fields: The degree 4 case*, 1213
- Fukuda, T., and Komatsu, K. *On a unit group generated by special values of Siegel modular functions*, 1207
- Gaál, István, and Lettl, Günter. *A parametric family of quintic Thue equations*, 851
- Gallant, Robert, Lambert, Robert, and Vanstone, Scott. *Improving the parallelized Pollard lambda search on anomalous binary curves*, 1699
- Gangl, Herbert. *See Browkin, Jerzy*
- Gastaldi, Lucia. *See Boffi, Daniele*
- van der Geer, Gerard, and van der Vlugt, Marcel. *Tables of curves with many points*, 797
- Golub, G. H. *See Calvetti, D.*
- González, C., and Palencia, C. *Stability of Runge–Kutta methods for quasilinear parabolic problems*, 609
- González-Vera, P. *See Bultheel, A.*
- Gosse, Laurent, and James, François. *Numerical approximations of one-dimensional linear conservation equations with discontinuous coefficients*, 987
- Gragg, W. B. *See Calvetti, D.*
- Griewank, Andreas, Utke, Jean, and Walther, Andrea. *Evaluating higher derivative tensors by forward propagation of univariate Taylor series*, 1117
- Grundman, H. G. *Explicit resolutions of cubic cusp singularities*, 815
- Halberstadt, Emmanuel, and Kraus, Alain. *On the modular curves $Y_E(7)$* , 1193
- Hanrot, Guillaume. *Solving Thue equations without the full unit group*, 395
- Haug, Einar, and Winther, Ragnar. *A domain embedding preconditioner for the Lagrange multiplier system*, 65
- Hennecart, François. *See Deshouillers, Jean-Marc*
- Hernández, V. *See Aliaga, J. I.*
- Hofmann, Norbert, Müller-Gronbach, Thomas, and Ritter, Klaus. *Optimal approximation of stochastic differential equations by adaptive step-size control*, 1017
- Howe, Everett W. *Higher-order Carmichael numbers*, 1711
- Hudson, Richard H. *See Bays, Carter*
- Hulpke, Alexander. *Conjugacy classes in finite permutation groups via homomorphic images*, 1633
- Hunter, David, and Nikolov, Geno. *On the error term of symmetric Gauss–Lobatto quadrature formulae for analytic functions*, 269
- Iannucci, Douglas E. *The third largest prime divisor of an odd perfect number exceeds one hundred*, 867
- Iserles, Arieh. *See Celledoni, Elena*
- Jaje, Lynda M. *See Butske, William*
- James, François. *See Gosse, Laurent*
- Jin Qi-nian. *On the iteratively regularized Gauss–Newton method for solving nonlinear ill-posed problems*, 1603
- Johansson, Stefan. *On fundamental domains of arithmetic Fuchsian groups*, 339
- Komatsu, K. *See Fukuda, T.*
- Koyama, Kenji. *On searching for solutions of the Diophantine equation $x^3 + y^3 + 2z^3 = n$* , 1735
- Kraus, Alain. *See Halberstadt, Emmanuel*
- Kröner, Dietmar, and Ohlberger, Mario. *A posteriori error estimates for upwind finite volume schemes for nonlinear conservation laws in multi dimensions*, 25
- Kumada, Toshihiro, Leeb, Hannes, Kurita, Yoshiharu, and Matsumoto, Makoto. *New primitive t -nomials ($t = 3, 5$) over $GF(2)$ whose degree is a Mersenne exponent*, 811
- Kurita, Yoshiharu. *See Kumada, Toshihiro*

Mathematics of Computation

This journal publishes research articles in computational mathematics. Areas covered include numerical analysis, with emphasis on the mathematical analysis and development of methods, computational number theory and algebra, and related fields. Table errata and reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to e-MATH. Articles are posted to e-MATH individually soon after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/publications/. Subscription prices for Volume 69 (2000) are as follows: for paper delivery, \$345 list, \$276 institutional member, \$311 corporate member, \$224 member of CBMS organizations; \$207 individual member; for electronic delivery, \$311 list, \$249 institutional member, \$280 corporate member, \$202 member of CBMS organizations, \$187 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$12 for surface delivery outside the United States and India; \$18 to India. Expedited delivery to destinations in North America is \$17; elsewhere \$56.

Back number information. For back issues see the *AMS Catalog of Publications*.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904. *All orders must be accompanied by payment.* Other correspondence should be addressed to P.O. Box 6248, Providence, RI 02940-6248.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Assistant to the Publisher, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 69, No. 229

January 2000

R. H. Nochetto, A. Schmidt, and C. Verdi , A posteriori error estimation and adaptivity for degenerate parabolic problems	1
Dietmar Kröner and Mario Ohlberger , A posteriori error estimates for upwind finite volume schemes for nonlinear conservation laws in multi dimensions	25
Bruno Franchi and Maria Carla Tesi , A finite element approximation for a class of degenerate elliptic equations	41
Einar Haug and Ragnar Winther , A domain embedding preconditioner for the Lagrange multiplier system	65
Matthias Wiedmer , Finite element approximation for equations of magnetohydrodynamics	83
So-Hsiang Chou and Qian Li , Error estimates in L^2, H^1 and L^∞ in covolume methods for elliptic and parabolic problems: A unified approach	103
Daniele Boffi, Franco Brezzi, and Lucia Gastaldi , On the problem of spurious eigenvalues in the approximation of linear elliptic problems in mixed form	121
Zhimin Zhang , Ultraconvergence of the patch recovery technique II	141
Qun Lin and Ningning Yan , Global superconvergence for Maxwell's equations	159
Dongwoo Sheen, Ian H. Sloan, and Vidar Thomée , A parallel method for time-discretization of parabolic problems based on contour integral representation and quadrature	177
Z. Wiener and Y. Yomdin , From formal numerical solutions of elliptic PDE's to the true ones	197
G. N. Milstein and M. V. Tretyakov , Numerical algorithms for semilinear parabolic equations with small parameter based on approximation of stochastic equations	237
David Hunter and Geno Nikolov , On the error term of symmetric Gauss-Lobatto quadrature formulae for analytic functions	269
Liqun Qi and Defeng Sun , Improving the convergence of non-interior point algorithms for nonlinear complementarity problems	283
Avram Sidi , Extrapolation methods and derivatives of limits of sequences	305
Svein Mossige , The Postage Stamp Problem: An algorithm to determine the h-range on the h-range formula on the extremal basis problem for $k = 4$	325
Stefan Johansson , On fundamental domains of arithmetic Fuchsian groups	339
R. Lercier and F. Morain , Computing isogenies between elliptic curves over F_{p^n} using Couveignes's algorithm	351
Stéphane Louboutin , Computation of relative class numbers of CM-fields by using Hecke L-functions	371
Guillaume Hanrot , Solving Thue equations without the full unit group ..	395
William Butske, Lynda M. Jaje, and Daniel R. Mayernik , On the equation $\sum_{p N} \frac{1}{p} + \frac{1}{N} = 1$, pseudoperfect numbers, and perfectly weighted graphs	407

Jean-Marc Deshouillers, François Hennecart, Bernard Landreau, with an appendix by I. Gusti Putu Purnaba, 7 373 170 279 850 .	421
Reviews and Descriptions of Tables and Books	441
Adhemar Bultheel, Pablo Gonzáles-Vera, Erik Hendriksen, and Olav Njåstad 1

Editorial Information

As of May 31, 2000, the backlog for this journal was approximately 3 issues. This estimate is the result of dividing the number of manuscripts for this journal in the Providence office that have not yet gone to the printer on the above date by the average number of articles per issue over the previous twelve months, reduced by the number of issues published in six months (the time necessary for editing and composing a typical issue). In an effort to make articles available as quickly as possible, articles are posted to e-MATH individually soon after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. An author should submit three paper copies of the manuscript. Initial submission by email is not allowed. The author may suggest an appropriate editor for his paper. All contributions intended for publication and all books for review should be addressed to Lars B. Wahlbin, Managing Editor, Mathematics of Computation, Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall, Cornell University, Ithaca, NY 14853-3801. The date received, which is published with the final version of an accepted paper, is the date received in the office of the Managing Editor, and it is the responsibility of the author to submit manuscripts directly to this office.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief and reasonably self-contained. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/publications/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/. When the manuscript is submitted, authors should supply the editor with electronic addresses if available. These will be printed after the postal address at the end of each article.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, the *AMS Author Handbook*, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of $\mathcal{T}\mathcal{E}\mathcal{X}$, using $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the highly preferred format of $\mathcal{T}\mathcal{E}\mathcal{X}$, but author packages are also available in $\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathcal{T}\mathcal{E}\mathcal{X}$. Those authors who make use of these style files from the beginning of the

writing process will further reduce their own efforts. Manuscripts prepared electronically in \LaTeX or plain \TeX are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production system. \LaTeX users will find that $\mathcal{A}\mathcal{M}\mathcal{S}\text{\LaTeX}$ is the same as \LaTeX with additional commands to simplify the typesetting of mathematics, and users of plain \TeX should have the foundation for learning $\mathcal{A}\mathcal{M}\mathcal{S}\text{\LaTeX}$.

Authors may retrieve an author package from e-MATH starting from www.ams.org/tex/ or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format following the author packages link from www.ams.org/tex/. The author package can also be obtained free of charge by sending email to pub@ams.org (Internet) or from the Publication Division, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When requesting an author package, please specify $\mathcal{A}\mathcal{M}\mathcal{S}\text{\LaTeX}$ or $\mathcal{A}\mathcal{M}\mathcal{S}\text{\TeX}$, Macintosh or IBM (3.5) format, and the publication in which your paper will appear. Please be sure to include your complete mailing address.

The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper manuscript to the Managing Editor, who will forward a copy to the Providence office. Editors will require authors to send their electronically prepared manuscripts to the Providence office in a timely fashion. Electronically prepared manuscripts can be sent via email to pub-submit@ams.org (Internet) or on diskette to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. When sending a manuscript electronically, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available at www.ams.org/jourhtml/graphics.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Secure manuscript tracking on the Web and via email. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/ or via email sent to mstrack-query@ams.org. To access by email, on the subject line of the message simply enter the AMS ID and Article ID. To track more than one manuscript by email, choose one of the Article IDs and enter the AMS ID and the Article ID followed by the word *all* on the subject line. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

T_EX files available. Beginning with the January 1992 issue of the *Bulletin* and the January 1996 issues of *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS*, T_EX files can be downloaded from e-MATH, starting from www.ams.org/journals/. Authors without Web access may request their files at the address given below after the article has been published. For *Bulletin* papers published in 1987 through 1991 and for *Transactions*, *Proceedings*, *Mathematics of Computation*, and the *Journal of the AMS* papers published in 1987 through 1995, T_EX files are available upon request for authors without Web access by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T_EX files cannot be guaranteed to run through the author's version of T_EX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T_EX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, P.O. Box 6248, Providence, RI 02940-6248.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 69, No. 232

October 2000

Susanne C. Brenner and Li-Yeng Sung , Lower bounds for nonoverlapping domain decomposition preconditioners in two dimensions	1319
Lori Badea and Junping Wang , An additive Schwarz method for variational inequalities	1341
M. Lukáčová-Medvid'ová, K. W. Morton, and G. Warnecke , Evolution Galerkin methods for hyperbolic systems in two space dimensions	1355
Cheng Wang and Jian-Guo Liu , Convergence of gauge method for incompressible flow	1385
Christopher Beattie , Galerkin eigenvector approximations	1409
E. B. Davies , A hierarchical method for obtaining eigenvalue enclosures	1435
Elena Celledoni and Arieh Iserles , Approximating the exponential from a Lie algebra to a Lie group	1457
Shoufu Li , Stability and B -convergence properties of multistep Runge-Kutta methods	1481
Michael S. Floater and J. M. Peña , Monotonicity preservation on triangles	1505
Jieqing Tan and Shuo Tang , Bivariate composite vector valued rational interpolation	1521
Stefano Serra Capizzano , Korovkin tests, approximation, and ergodic theory	1533
Charles H. Tong and Qiang Ye , Analysis of the finite precision bi-conjugate gradient algorithm for nonsymmetric linear systems	1559
J. I. Aliaga, D. L. Boley, R. W. Freund, and V. Hernández , A Lanczos-type method for multiple starting vectors	1577
Jin Qi-nian , On the iteratively regularized Gauss-Newton method for solving nonlinear ill-posed problems	1603
Jean-Marc Couveignes , Isomorphisms between Artin-Schreier towers	1625
Alexander Hulpke , Conjugacy classes in finite permutation groups via homomorphic images	1633
F. Thaine , Families of irreducible polynomials of Gaussian periods and matrices of cyclotomic numbers	1653
Jerzy Browkin, with an appendix by Karim Belabas, and Herbert Gangl , Computing the tame kernel of quadratic imaginary fields	1667
Paul van Wamelen , Poonen's question concerning isogenies between Smart's genus 2 curves	1685
